

Accurate Electronic Inclinometer with an Integrated Signal Amplifier for Analog 0...5V Output in ± 10 , ± 30 and $\pm 80^\circ$ Ranges.

Description

The NGU Series of inclinometers - NG2U ($\pm 10^\circ$), NG3U ($\pm 30^\circ$), and NG4U ($\pm 80^\circ$) - are liquid capacitive gravity based sensors with integrated sensor and excitation electronics. The thermal drift of the primary sensor is further compensated by an electronic equalization of the temperature.

An integrated highly stable voltage regulator makes it possible to supply the inclinometer from any unregulated supply or battery as low as +8V and up to +30VDC. The measuring principle assures a linear angle output with 0...5VDC calibrated to equal the measuring range of the sensor. The measuring time constant can be ordered with longer rise times upon request.

Applications

The NGU Series is well suited for industrial use where high accuracy, long-term stability, and high voltage outputs are desired in environments that experience large temperature changes and where non-stable supply voltages are present.

For additional functionality the SB1U and SB2G Inclinometer Sensor Packages have both zero and gain adjustments. For dual axis applications refer to the SB2G.

Typically used in building and bridge construction, mining, radar alignment systems, pitch and roll, agricultural/construction equipment, and process machinery.
