

SAME PROVEN DESIGN, NEW METAL BRAKE OPTION!

The RWM Installable Cam Wheel Brake or “ICWB” for short is one of the best brakes for 2” wide wheels in the industry and is the recommended upgrade over most other 2” brake options. This brake is a great fit for medium duty casters, especially Kingpinless™, and offers exceptional performance to lock the product in place. The pedal rotates a metal pad, which locks the wheel in place.

With the same design as the highly popular RWM ICWB brake, the MICWB provides a more heavy duty, all-aluminum brake pedal that can be utilized in high-temp applications. Similar to the ICWB counterpart, the pedal rotates a metal pad, which locks the wheel in place. The MICWB is an excellent upgrade for more demanding applications. Like the ICWB, the MICWB also functions with swivel locks.

Both brakes:

- Fit 2” wide wheels.
- Large foot pedals rotate metal pads that lock wheels into place.
- Function with swivel locks.
- Work with RWM 45, 46, 47, 48, 52, & 65 series rigs.
