Swivel Locks

RWM Casters offers a variety of **Swivel Locks** including Demountable Swivel Locks, Passive Swivel Locks, Heavy Duty Threaded Swivel Locks and Foot Operated Swivel Locks. These plunger type swivel locks are used where it is necessary to convert swivel casters into rigid casters for aided steering control. Demountable swivel locks (DSL) are designed for field installation or replacement of swivel locks. The swivel caster must have a notched yoke (NY) for the demountable *swivel* lock to operate. See more detailed descriptions of our Swivel Locks below.

PASSIVE SWIVEL LOCK (PSL)

Our Passive Swivel Locks are designed to engage and disengage when a predetermined force is applied to the swivel caster. Call the factory for availability of these options on selected casters.

HEAVY DUTY THREADED SWIVEL LOCK (HDSL)

RWM's Heavy Duty Threaded Swivel Locks are used in rugged applications where durability of swivel lock mechanisms are required.

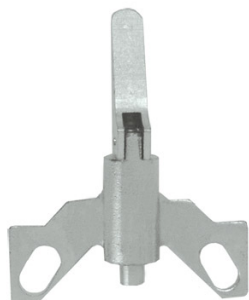

FOOT OPERATED SWIVEL LOCK (FOSL)

Our Foot Operated Swivel Locks are designed where the plunger is attached to a cam lever that engages and disengages lock with foot action.
