

EXPRESSING

Light Tableau

A specialized prismatic lens combined with a controlled light path produces stereoscopic lighting effects. Virtual switches sense the person in front of the device to enable the person to control different features independently.

レンズの特殊プリズムとLED光路の制御の組合せで、立体感のある光を演出することができます。器具の前に立つと空間スイッチが感知し作動します。

- Perceived three-dimensionality made possible
- By modulating LEDs RGB values, produced colors are made rich and diverse

- 擬似的な立体感を演出
- RGBのLED制御により、多彩な演出が可能
