Secure Plain Paper Prescription Printing

TROY Secure Print Enterprise is a powerful software solution which offers a cost effective and flexible method for adding CMS compliant fraud prevention features to printed prescriptions using plain paper and existing stand alone or network laser printers.

CMS Compliance Requirements :

- Must prevent unauthorized copying of a completed or blank prescription form.
- Must prevent the erasure or modification of information written on the prescription by the prescriber, e.g., dosage, refill options.
- Must prevent the use of counterfeit prescription forms.

TSPE Features Exceed CMS Requirements:

- TROY Copy Evident Pantograph is revealed when unauthorized copying or scanning occurs.
- TROYMark™ Variable Data Watermark prints unique user defined patient and prescription data across the back of each prescription for alteration protection.
- TROY optimized MicroPrint indicates a copy under simple magnification.
- Intelligent TROY Warning Box information makes authentication quick and easy.

1

Prescription with TROY Security features selected is sent to printer.

2

TROY SECURE PRINT ENTERPRISE
• Receives the print file.
• Inserts selected security features into print file.
• Routes CMS compliant prescription to designated laser printer.

3

Output reformatted CMS compliant prescription with secure features on laser printer.
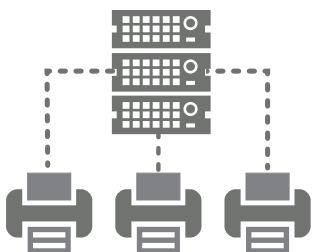

Save **Time And Cost**

- Eliminates need to purchase expensive prescription paper and other security stock; security features are applied directly to plain paper on each prescription.
- Improves workflows by reducing time spent on chain of custody requirements involved with inventory storage and replenishing of preprinted security forms.
- Easily update TSPE print settings as federal CMS requirements are revised.

Regulatory **Compliance and Fraud Protection**

- TROYMark™ prints unique user defined variable data on the back of each prescription or other security document.
- TROY Copy Evident Pantograph applied in the background is easily visible if a prescription or other secure document is photocopied.
- TROY MicroPrint provides secondary authentication method with microprint border text visible under simple magnification.
- TROY Intelligent Warning Box allows first line inspectors to easily verify document authenticity.

Flexible **Deployment**

- Windows server based application installs on existing computer or network with PCL5 laser printers connected.
- Supports single printer applications as well as multiple network printers in different locations.
- Pantograph Studio offers half a million copy-evident pantograph patterns for optimal results to ensure compatibility with most printers.
- Dynamic user defined print settings allow normal use of printers when security features are not needed.
- Customizable security settings are easily selected in Windows format print settings window.
