Preliminary

CMOS IC

FAIL-SAFE, 115KBPS, RS-485 / RS-422 TRANSCEIVERS WITH $\pm 12KV$ ESD-PROTECTED

SOP-8

DESCRIPTION

The UTC **UTRS3082** is a half-duplex transceiver designed for RS-485 data bus network, which contains one transmitter and one receiver. The UTC **UTRS3082** features a fail-safe receiver, which guarantees the receiver to output high when the receiver inputs are open, short or idle.

The UTC **UTRS3082** also features a hot-swap glitch free protection circuits which guarantee outputs of both the transmitter and the receiver in a high impedance state during the power up period. So that the large short current from power to ground will be disabled by glitch free function, which will save the power and enhance the efficiency of the power up.

The UTC **UTRS3082** is optimized for signal rates up to 115Kbps with differential voltage of 2.3V. The UTC **UTRS3082** also has the thermal shutdown function when the temperature is over 150°C and the protection of the current limitation in the transmitter to protect the itself from the damage by the system-fault conditions during normal operation.

FEATURES
