

Service sets – For your process reliability!!

Service sets for powder injectors

The service sets for the powder injectors have been designed to optimize the process and application reliability. The service sets contain all the required parts that are subject to wear in the wear cycle of an injector. By replacing the required parts that are subject to wear in good time and in a targeted way, the potential system availability and the process reliability can be improved.

Special advantages

- Increased system availability
- More consistent powder delivery by replacing parts that are subject to wear in a targeted way
- Easy handling of parts that are subject to wear
- Price advantage compared to purchase of individual products

Included items

- 3 venturi nozzles
- 1 injector nozzle
- User guide in the form of a label

Order information

- Different sets for PI-P1 and HiCoat injectors
- Available from May 2016
