

# PRODUCT CHANGE NOTIFICATION

PCN-WD2014-05-3

To our customers

Dear Madam, dear Sir .

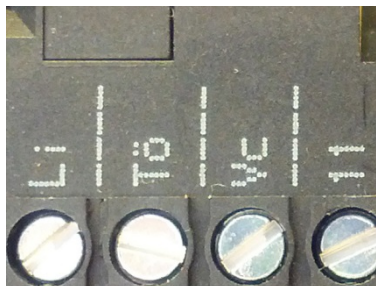

we would like to inform you that we successfully changed over to the inkjet printing process in some selected product lines and will extend from June 2014 the inkjet printing gradually on our entire product range.

The investment in this technology gives us the opportunity to respect the requirements of our customers to change a print image in a very flexible way. The release of inkjet printings are based on the same procedures as the previous pad printing. The comparable stability of the inkjet imprinting has been proved.

The advantages of the new process in its entirety allow us to keep the costs/ prices of our marked products currently on a stable level. As the previously used part numbers will not be changed, the purchasing process of our customers will not be affected.

Of course, we will respect the explicit choice of our customers to continue to use the pad print process in the future. Due to the significantly more complex handling, however, we have to make an appropriate price adjustment and assign new part numbers in these cases.

Existing stocks with the marking made by the previously used pad printing process will be delivered.

Please inform us immediately if you do not want to change and continue to use our products with the marking made by the pad printing process. The switch over to the new ink jet printing process will be realized automatically if we do
