## Wieland Electric Expands **revos** IT Series Split Housing Data Cable Feed- Through Connectors

Wieland Electric Inc., a leading global manufacturer of innovative electrical interconnect technology, has expanded its portfolio of **revos** rectangular connectors with the new **revos** IT Series split housing data cable feed-through connectors, which enable up to four pre-terminated data cables to be safely routed through a control cabinet or enclosure wall.

The **revos** IT Series data cable feed-through connectors accommodate cables with diameters spanning 4mm to 9mm, and are rated for IP65 environmental protection against dust and water ingress. In addition, the connector's design incorporates a strain-relief feature to further enhance the robustness of the connection.

"More networked and automated machines on factory floors mean more specialized, pre-terminated cables, all of which need to be safely and conveniently routed through control cabinet or enclosure walls," said Martin Lalonde, application engineer at Wieland Electric. "The **revos** IT Series' split housing is ideally suited for passing preassembled cables — like encoder, data, and other unique cables — while maintaining the quality and signal integrity of the OEM cabling, and providing the convenience and robustness of industrial rectangular connectors."

### **About Wieland**

Wieland Electric Inc., founded in 1910, is a leading global manufacturer of electrical interconnect technology products. Headquartered in Germany with a North American Operations Center and subsidiaries throughout the world, Wieland Electric has 2200 employees in more than 70 countries to service worldwide customers. Wieland provides solutions to the industrial and building automation, wind, solar, HVAC, and power generation markets. Local inventory, value-added services, and technical resources are headquartered at the North American Operations Center and support a national sales and distribution channel. Wieland is ISO 9001 certified.
