

## **Durakool D41F Interface Relay Assemblies Save DIN Rail Space**

Willow Technologies Limited ([www.willow.co.uk](http://www.willow.co.uk)) introduces Durakool's **NEW range of slim interface relays** designed to save valuable DIN rail space, occupying only 6.3mm on the rail per relay. The D41F is available with screw terminals or labour saving spring clamp terminals and is designed for PLC interfacing or any application which requires SPCO contacts for switching up to 6A at 230VAC.

John Merrill, Relays Product Manager at Willow commented “The D41F has five different standard operating voltages including the popular 24V AC/DC option, which reduces stock holding as one relay will operate on 12V to 24V DC or AC control inputs.”

“In addition, there is an LED to indicate operation and an ejector lever to enable easy relay replacement, if necessary, when mounted close to other Interface Relays or DIN rail components. The standard colour is a light grey, other colours are available to special, volume, order.” Continued Merrill.

To accompany the range, there are a selection of jumper bars (Terminal Strips) in red, blue and black and a ribbon cable adapter module to make a quick and neat assembly on the DIN rail. Also available is a DIN rail spacer 2mm wide to separate blocks of D41F Interface relays with specific functions.

To compliment the Durakool D41F range of electromechanical interface relays, Willow also offers the SAS Series of solid-state relays which will also fit in the D41F sockets.

“Durakool continue to design and manufacture an extensive range of outstanding quality, innovative and very importantly, highly useful relays, the D41 Interface Relay Assemblies are no exception.” Concluded Merrill.

Founded in 1989, Willow Technologies is located in Copthorne, West Sussex in the UK. We provide electronic solutions to customers by designing, manufacturing and supplying components and systems globally to the electrical and electronic marketplace. Specialists in switching, sensing, resistive and hermetic seal solutions we have a wide portfolio of sensing technologies and over 60 years of application experience. Our in-house engineering capability and rapid prototyping facility for custom parts enable us to develop products to match specific application requirements. Willow is ISO9001:2000 registered.

Durakool is a brand name registered by American Electronic Components, based in Elkhart, Indiana, USA. The Durakool Relay range is extensive, of excellent quality and designed and manufactured to a very high specification.
