## Chapter 1. General Information

### 1.1 Introduction

The PL-8000 is a 1U rack-mounted hardware platform designed for network service applications. Built with Intel® Embedded IA components warranted for longevity, the PL-8000 supports the Intel® EP80579 Integrated SoC with QuickAssist security accelerator. Compared against three chip solutions, Intel® EP80579 offers more application specific performance in less space with the PL-8000.

The platform supports SoC core speed that ranges from 600Mhz to 1.2 GHz, high bandwidth DDRII DIMM slot with memory up to 2GB and a full set of VPN functions such as encryption, hashing and public/private key generation. In order to provide the best network performance and best utilization, the powerful storage interfaces include one 3.5" SATA HDD and CompactFlash™. This platform affords five GbE Copper and max to 8 GbE Ethernet ports via PCI-E by 1 or by 4 on front-panel. To prevent network problems when the platform shuts down, PL-8000 supports one segment of LAN bypass function through WDT and GPIO pin definitions. The front panel also has one USB 2.0 port, one RJ-45 console port and LED indicators that monitor power and storage device activities for local system management, maintenance and diagnostics. In addition, the PL-8000 supports two PCI-E by4 slot, and is RoHS, FCC and CE compliant.

### 1.2 Specification

Processor System	CPU	Intel® EP80579 Integrated Processor (Tolapai) supports 600/1066/1200 MHz processors
	Chipset	Intel® EP80579 (Tolapai)
	Front Side Bus	1333/1066/800MHz FSB
	BIOS	AMI® BIOS
Memory	Technology	Un-buffered and Non-ECC DDR2 800/667/533/400 MHz memory
	Capacity	Up to 2GB with 1 SO-DIMM socket
Expansion	Expansion Slots	one PCI-E x4 slot for expansion module one PCI-E x4 golden finger for expansion module (via optional Riser Card,R143)
Ethernet	GbE Ethernet	Support max 8 GbE ports (4 GbE via optional expansion module)

# User's Manual

	LAN bypass	two pairs bypass
Storage	HDD	one internal 3.5" SATA HDD bay
	Compact Flash Socket	one CompactFlash™ Type I/II
I/O	USB	one USB2.0 one internal 5x2 pin header
	Serial	one RJ45 Console port (COM1) one internal 5x2 pin header (COM2)
Power Supply	Watt	ATX power supply
Mechanical and Environment	Form Factor	1U rack-mount
	LCD Module	one 16x2 LCM
	Keypad	Four buttons keypad
	LED	one Power LED (Green) one HDD LED (Yellow) one Status LED (Green/Yellow via programmable GPIO)
	Dimension( W x D x H )	440mm (W) x 270mm (D) x 44mm (H) (17.3" W x 10.7" D x 1.7" H)
	Operating Temperature	Operating: 0 ~ 40°C ( 32 ~ 104°F )
	Humidity	10 ~ 85% relative humidity, non-operating, non-condensing
Weight	1pc/CTN, 5.2kgs, 59cm(W) x 43.2cm(D) x 15.9cm(H)	
Certification	CE/FCC	

## 1.3 Ordering Information

We offer the following accessories for the PL-8000 appliance.

PL-8000A	1U Rackmount Intel EP80579 network system, application Tolapai 600MHz onboard, 5 GbE, SATA, CF, support bypass (CB-7970A)
PL-8000C	1U Rackmount Intel EP80579 network system, application Tolapai 1.2GHz onboard, 8 GbE, SATA, CF, support bypass (CB-7970C + R137A)
PL-8000E	1U Rackmount Intel EP80579 network system, embedded Tolapai 1.2GHz onboard, 7 GbE, SATA, CF, PCI-Ex4 slot, support bypass (CB-7970E + R137A)
R119A	Expansion module with 2 RJ45 GbE ports and 2 SFP ports, Intel

# User's Manual

	82571EB
R120A	Expansion module with 4 SFP GbE ports, Intel 82571EB
R121A	Expansion module with 2 SFP ports, Intel 82571EB
R121B	Expansion module with 2 RJ45 GbE ports, Intel 82571EB
R122A	Expansion module with 4 RJ45 ports, Intel 82571EB
R137A	Expansion module with 4 RJ45 ports, Intel 82573L
R143	Riser card for Expansion module (PCI-E x4)
R144	Riser card for PCI-E x4 add-on card (standard PCI-E x16 connector)
DK001	Cable development kit

## 1.4 Packaging

Check that the following items have been included in the package before installation.

1. PL-8000 Appliance
2. Quick Installation Guide (Optional)
3. Cables (Optional)
4. CD-ROM that contains the following folders:
  - (1) Manual
  - (2) System Driver
  - (3) Ethernet Driver
  - (4) Utility Tools

If any item of above is missing or damaged, please contact your dealer or retailer from whom you purchased the PL-8000. Keep the box and carton when you probably ship or store PL-8000 in near future. After you unpack the goods, inspect and make sure the packaging is intact. Do not plug the power adapter to the appliance of PL-8000 if you already find it appears damaged.

*Note: Keep the PL-8000 in the original packaging until you start installation.*

## 1.5 Precautions

Please make sure you properly ground yourself before handling the PL-8000 appliance or other system components. Electrostatic discharge can be easily damage the PL-8000 appliance.

Do not remove the anti-static packing until you are ready to install the PL-8000 appliance.

## User's Manual

---

Ground yourself before removing any system component from its protective anti-static packaging. To ground yourself, grasp the expansion slot covers or other unpainted parts of the computer chassis.

Handle the PL-8000 appliance by its edges and avoid touching its components.

# User's Manual

## 2.3 CompactFlash™ Card Socket Pin Define

CompactFlash™ card is a small removable mass storage device. It can provide complete PCMCIA-ATA functionality and compatibility plus True IDE functionality compatible with ATA/ATAPI-4.

CompactFlash™ storage products are solid state form factor, it means they contain no moving parts. Thus, it provides users with much greater protection of the data than conventional magnetic disk device.

## Chapter 3. Optional GbE Module & Riser Card Setting

The PL-8000 can offer various GbE module combinations to match various applications and market demand.

### 3.1 R137: Ethernet module with four GbE Copper

R137A is a four GbE Copper module. The golden edge fingers must be connected with CN13 proprietary connector of the PL-8000 board.

Golden Edge Fingers to be connected with CN13  
of CB-7970. (or PCI-E x4 slot of R143)

4 x GbE Copper ports

## 3.2 R119: Ethernet module with two GbE Copper and two GbE SFP

R119A is a two GbE Copper and two GbE SFP Ethernet module. The golden edge fingers are to be connected with CN13 proprietary connector of PL-8000 board.

Golden Edge Fingers to be connected with CN13  
of CB-7970. (or PCI-E x4 slot of R143)

# User's Manual

## 3.3 R120: Ethernet module with four GbE SFP

R120A is a four GbE SFP Ethernet module. The golden edge fingers to be connected with CN13 proprietary connector of PL-8000 board.

Golden Edge Fingers to be connected with CN13  
of CB-7970. (or PCI-E x4 slot of R143)

4 x GbE SFP ports

## 3.4 R121: Ethernet module with two GbE Copper or SFP

R121B is a two GbE Copper Ethernet module and designed reserved one pair bypass function for optional (ODM project). The golden edge fingers must be connected with CN13 proprietary connector of CB-7970 board. The alternative R121A is a two GbE SFP Ethernet module.

Golden Edge Fingers to be connected  
with CN13 of CB-7970.  
(or PCI-E x4 slot of R143)

2 x GbE SFP ports

Picture-1: R121A

Golden Edge Fingers to be connected  
with CN13 of CB-7970.  
(or PCI-E x4 slot of R143)

2 x GbE Copper ports

Picture-2: R121B

# User's Manual

## 3.5 R122: Ethernet module with four GbE Copper

R122A is a four GbE Copper Ethernet module. The golden edge fingers to be connected with CN13 proprietary connector of PL-8000 board.

Golden Edge Fingers to be connected with CN13 of  
CB-7970. (or PCI-E x4 slot of R143)

4 x GbE Copper ports

## 3.6 R143: Riser card for expansion module PCI-E x4

R143 is one PCI-E x4 to PCI-E x4(proprietary) riser card for expansion Ethernet module. It must be connected to CN28 (PCI-E x4 Golden Finger) of PL-8000 appliance.

## 3.7 R144: Riser card for PCI-E x4 add-on card (standard PCI-E x16 connector)

R144 is one PCI-E x4 to PCI-E x4 riser card for standard PCI-E x4/x1 add-on card. It must be connected to CN28(PCI-E x4 Golden Finger) of PL-8000 appliance.

## Chapter 4. BIOS Setup

The ROM chip of your PL-8000 board is configured with a customized Basic Input/Output System (BIOS) from AMI BIOS. The BIOS is a set of permanently recorded program routines that give the system its fundamental operational characteristics. It also tests the computer and determines how the computer reacts to instructions that are part of programs.

The BIOS is made up of code and programs that provide the device-level control for the major I/O devices in the system. It contains a set of routines called POST (Power-On Self Test) that checks out the system when you turn it on. The BIOS also includes CMOS Setup program, so no disk-based setup program is required. CMOS RAM stores information for:

- Date and time
- Memory capacity of the appliance
- Type of display adapter installed
- Number and type of disk drives

The CMOS memory is maintained by battery installed on the PL-8000 board. By using the battery, all memory in CMOS can be retained when the system power switch is turned off. The system BIOS also supports easy way to reload the CMOS data when you replace the battery of the battery power lose.

### 4.1 Quick Setup

In most cases, you can quickly configure the system by choosing the following main menu options:

1. Choose "Exit" → "Load Optimal Defaults" from the main menu. This loads the setup default values from the BIOS Features Setup and Chipset Features Setup screens.
2. Choose "Main" & "Advanced" from the main menu. This option lets you configure the date and time, hard disk type, floppy disk drive type, primary display and more.
3. In the main menu, press F10 ("Save Changes and Exit") to save your changes and reboot the system.

## 4.2 Entering the CMOS Setup Program

Use the CMOS Setup program to modify the system parameters to reflect the options installed in your system and to customize your system. For example, you should run the Setup program after you:

- Received an error code at startup
- Install another disk drive
- Use your system after not having used it for a long time
- Find the original setup missing
- Replace the battery
- Change to a different type of CPU
- Run the AMI Flash program to update the system BIOS

Run the CMOS Setup program after you turn on the system. On-screen instructions explain how to use the program.

↓ Enter the CMOS Setup program's main menu as follows:

1. Turn on or reboot the system. After the BIOS performs a series of diagnostic checks, the following message appears:  
"Press DEL to enter SETUP"
2. Press the <DEL> key to enter CMOS Setup program. The main menu appears:

```
Main  Advanced  PCIPnP  Boot  Security  Chipset  Exit
*****
* System Overview                               * Use [ENTER], [TAB] *

```

3. Choose a setup option with the arrow keys and press <Enter>. See the following sections for a brief description of each setup option.

**AMIBIOS:** Displays the auto-detected BIOS information.

**Processor:** Displays the auto-detected CPU specification.

**System Memory:** Displays the auto-detected system memory.

**SystemTime: [hour:min:sec]:**

This item allows you to set the system time.

**System Date [Day mm/dd/yyyy]:**

This item allows you to set the system date.

In the main menu, press F10 (“Save Changes and Exit”) to save your changes and reboot the system. Choosing “Discard Changes and Exit” ignores your changes and exits the program. Pressing <ESC> anywhere in the program returns you to the main menu.

## 4.3 Menu Options

The main menu options of the CMOS Setup program are described in the following and the following sections of this chapter.

**Main:** For changing the basic system configurations.

**Advanced:** For changing the advanced system settings.

**PCIPnP:** For changing the advanced PCI/PnP Settings.

**Boot:** For changing the system boot configurations.

**Security:** Use this menu to set User and Supervisor Passwords.

**Chipset:** For changing the chipset settings.

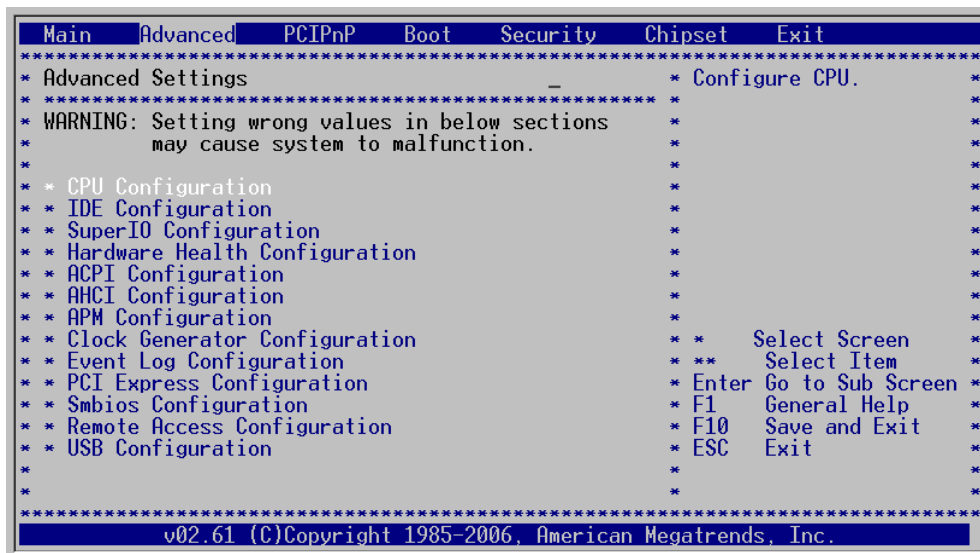

**Exit:** For selecting the exit options and loading default settings.

## 4.4 Advanced Menu

The Advanced menu items allow you to change the settings for the CPU and other system devices.

↓ Use the Advanced Setup option as follows:

1. Choose "Advanced" from the main menu. The following screen appears:

2. Use the arrow keys to move between fields. Modify the selected field using the PgUP/PgDN/+/- keys. Some fields let you enter numeric values directly.
3. After you have finished with the Advanced setup, press the <ESC> key to return to the main menu.

# User's Manual

## 4.4.1 CPU Configuration

This sub menu shows the CPU-related information which is automatically detected by BIOS.

```
Advanced
*****
* Configure advanced CPU settings
* Module Version -13.04
* *****
* Manufacturer: Intel
* Brand String: Genuine Intel(R) processor
* Frequency : 1.06GHz
* FSB Speed : 533MHz

```

### Configure SATA as: [IDE]

This item allows you to configure the SATA as IDE.

# User's Manual

\* **Primary IDE Master: [Hard Disk]**

\* **Primary IDE Slave: [Not Detected]**

\* **Secondary IDE Master: [Not Detected]**

\* **Secondary IDE Slave: [Not Detected]**

This information is auto-detected by BIOS and is not user-configurable. It will show "Not Detected" if no IDE device is installed in the system.

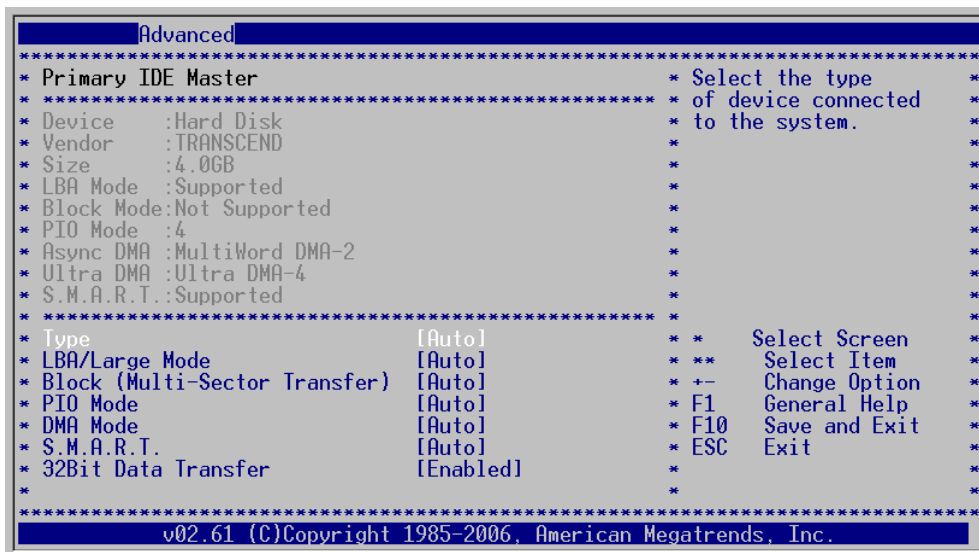

**Hard Disk Write protect: [Disabled]**

This menu allows you to enable or disable the hard disk write protect.

**IDE Detect Time Out (Sec): [35]**

Selects the time out value for detecting IDE devices.

\* **Primary IDE Master**

**Type: [Auto]**

Selects the type of IDE device. Setting to Auto allows automatic selection of the appropriate IDE device type.

**LBA/Large Mode: [Auto]**

Enables or disables the LBA/Large mode. Setting to Auto enables the LBA mode if the device supports this mode, and if the device was not previously formatted with LBA mode disabled.

# User's Manual

## Serial Port2 Address: [2F8/IRQ3]

Selects the Serial Port2 base address and IRQ.

### Serial Port2 Mode: [Normal]

Selects the Serial Port mode.

## Parallel Port Address: [378]

Selects the Parallel Port base addresses.

### Parallel Port Mode: [Normal]

Selects the Parallel Port mode.

### Parallel Port IRQ: [IRQ7]

Selects the Parallel Port IRQ.

## WatchDog Time-out: [Disabled]

Enables or disables the WatchDog Time-out.

### 4.4.4 Hardware Health Configuration

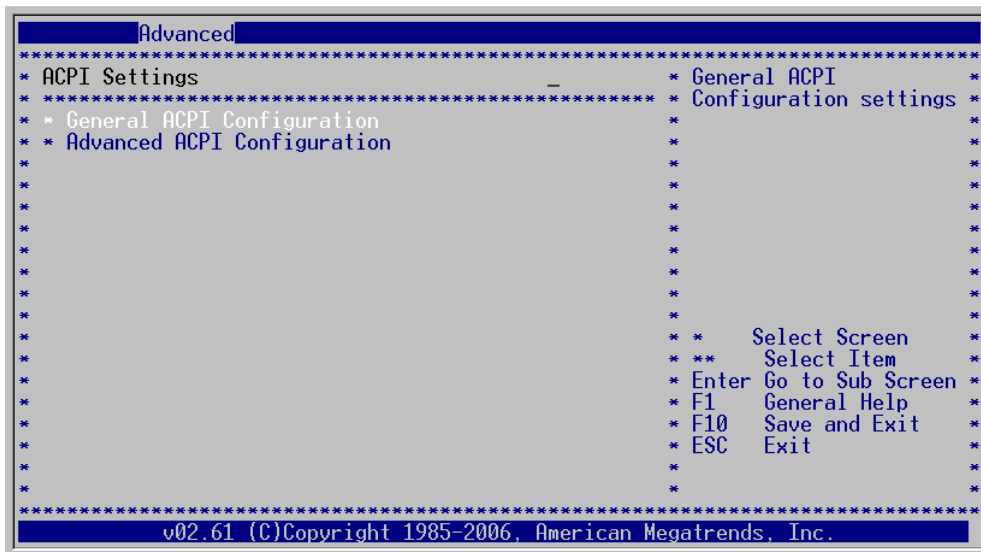

This screen shows you the CPU core voltage, System voltage, System temperature and CPU temperature.

```

# User's Manual

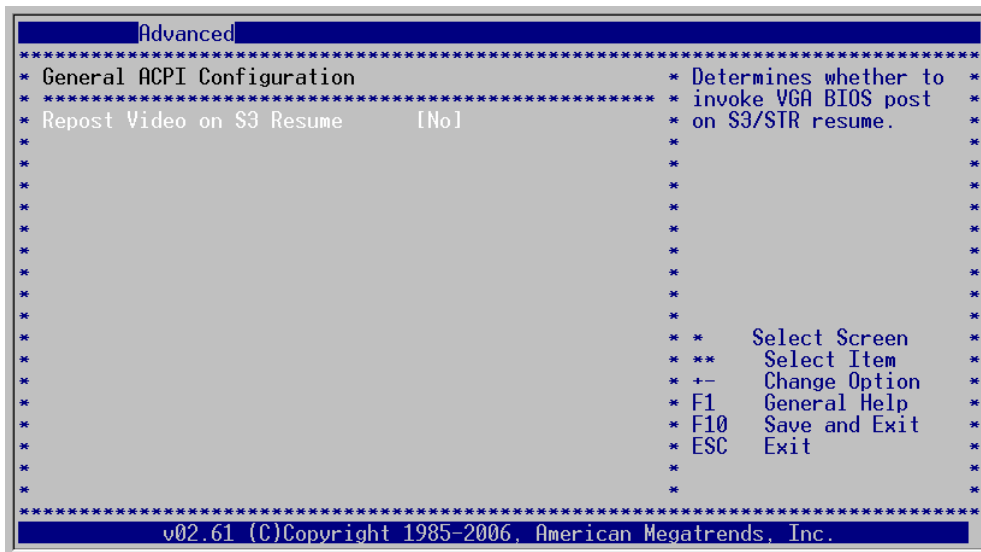

## 4.4.5 ACPI Configuration

This sub menu is used to change the settings for the ACPI.

### General ACPI Configuration:

This sub menu configures the general ACPI setting.

# User's Manual

## Advanced ACPI Configuration:

This sub menu configures additional ACPI options. It contains below sub-menus:

```
Advanced
*****
* Advanced ACPI Configuration                               *
*****
* ACPI Version Features [ACPI v1.0]                       *
* ACPI APIC support    [Enabled]                          *
* AMI OEMB table       [Enabled]                          *
* Headless mode        [Disabled]                         *
*                                                             *
*                                                             *
*                                                             *
*                                                             *
*                                                             *
* * Select Screen                                         *
* ** Select Item                                          *
* +- Change Option                                        *
* F1 General Help                                         *
* F10 Save and Exit                                       *
* ESC Exit                                                *
*                                                             *
*****
v02.61 (C)Copyright 1985-2006, American Megatrends, Inc.
```

### ACPI Version Features: [ACPI v1.0]

This item allows you to enable or disable RSPD pointers to 64-bit Fixed System Description Tables.

### ACPI APIC support: [Enabled]

This item allows you to enable or disable APIC features.

### AMI OEMB table: [Enabled]

Enables or disables the ACPI BIOS to add a pointer to an OEMB table in the Root System.

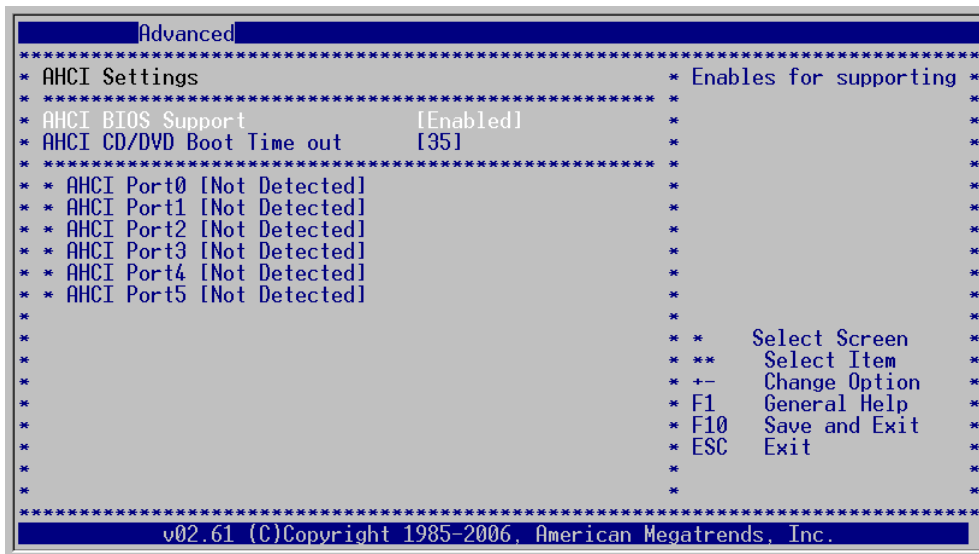

### Headless mode: [Disabled]

Enables or disables headless operation mode through ACPI.

## 4.4.6 AHCI Configuration

This sub menu is used to change the settings for the AHCI.

### AHCI BIOS Support: [Enabled]

Enables or disables the AHCI BIOS Support.

### AHCI CD/DVD Boot Time out: [35]

This item allows you to select the value for Boot Time out.

### AHCI Port0/Port1/Port2/Port3/Port4/Port5 Sub-Menu: [Not Detected]

#### SATA Port0: [Auto]

Select the type of device connected to the system.

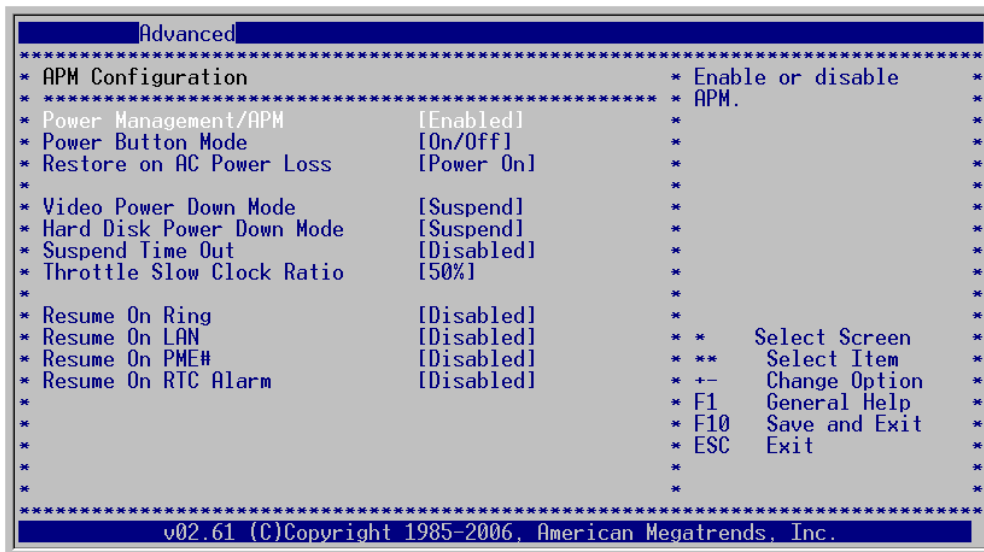

#### S.M.A.R.T.: [Enabled]

This item allows you to enable or disable S.M.A.R.T..

S.M.A.R.T.(Self-Monitoring, Analysis, and Reporting Technology) . It allows system to use the SMART protocol to monitor your hard disk status.

## 4.4.7 APM Configuration

This sub menu is used to change the settings for the APM.

### Power Management/APM: [Enabled]

This item allows you to enable or disable APM features.

### Power Button Mode: [On/Off]

Go into On/Off, or Suspend when Power Button is pressed.

### Restore on AC Power Loss: [Power On]

Configure how the system board responds to a power failure.

### Video Power Down Mode: [Suspend]

This item allows you to select the Video power down mode. [Suspend/Standby]

### Hard Disk Power Down Mode: [Suspend]

This item allows you to select the HDD power down mode. [Suspend/Standby]

### Suspend Time Out: [Disabled]

This item allows you to select the Suspend time out.

### Throttle Slow Clock Ratio: [50%]

This item allows you to select the duty cycle in throttle mode.

### Resume On Ring: [Disabled]

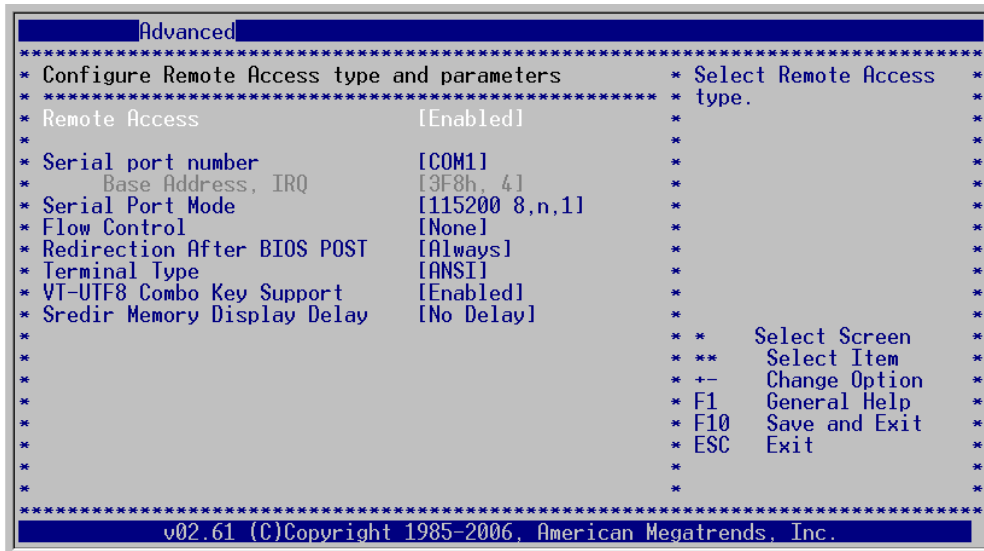

This item allows you to enable or disable the RI to generate a wake event.

## 4.4.12 Remote Access Configuration

This sub menu allows you to enable or disable Remote access. If you select [Enabled], below items will show up:

**Serial port number: [COM1]**

**Base Address. IRQ: [3F8h. 4]**

This item allows you to select the serial port for console redirection. Make sure the selected port is enabled.

**Serial Port Mode: [115200 8,n,1]**

This item allows you to select serial port settings.

**Flow Control: [None]**

This item allows you to select flow control for console redirection.

**Redirection After BIOS POST: [Always]**

This item allows you to set Redirection configuration after BIOS POST.

[Always]: The console redirection is always active.

[Boot Loader]: The console redirection is active during POST and Boot Loader.

[Disabled]: Turns off the console redirection after POST.

**Terminal Type: [ANSI]**

This item allows you to select the target terminal type.

**VT-UTF8 Combo Key Support: [Enabled]**

This item allows you to enable or disable VT-UTF8 combination key support for

# User's Manual

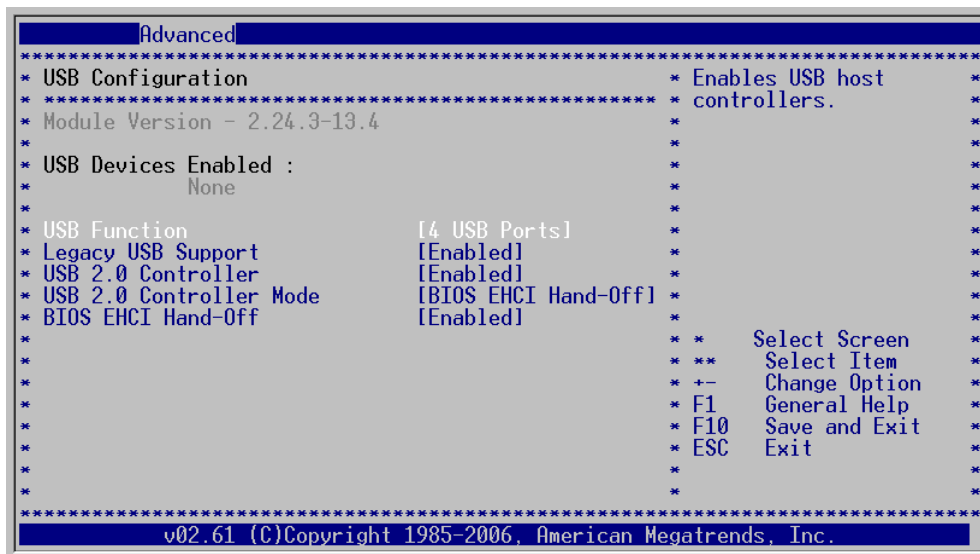

ANSI/VT100 terminals.

## Sredir Memory Display Delay: [No Delay]

This item allows you to set the delay in seconds to display memory information.

## 4.4.13 USB Configuration

This sub menu allows you to change the USB-related features.

## USB Function: [4 USB Ports]

This item allows you to setup the USB ports.

## Legacy USB Support: [Enabled]

Enables support for legacy USB. AUTO option disables legacy support if no USB devices are connected.

## USB 2.0 Controller: [Enabled]

This item allows you to enable or disable the USB 2.0 controller.

## USB 2.0 Controller Mode: [BIOS EHCI Hand-Off]

This item allows you to setup the USB 2.0 Controller Mode.

## BIOS EHCI Hand-Off: [Enabled]

This is a work around for Oses without EHCI hand-off support. The EHCI ownership change should claim by EHCI driver.

# User's Manual

## 4.5 PCIPnP Menu

The PCIPnP menu items allow you to change the settings for the advanced PCI/PnP.

↓ Use the PCIPnP Setup option as follows:

1. Choose "PCIPnP" from the main menu. The following screen appears:

```
Main  Advanced  PCIPnP  Boot  Security  Chipset  Exit
*****
* Advanced PCI/PnP Settings                               ** Clear NVRAM during
*                                                         ** System Boot.
* WARNING: Setting wrong values in below sections       **
*               may cause system to malfunction.        **
*                                                         **
* Clear NVRAM [No]                                       **
* Plug & Play O/S [No]                                   **
* PCI Latency Timer [64]                                 **
* Allocate IRQ to PCI VGA [Yes]                          **
* Palette Snooping [Disabled]                            **
* OffBoard PCI/ISA IDE Card [Auto]                       **
*                                                         **
* IRQ3 [Available]                                       ** *   Select Screen

```

2. Use the arrow keys to move between items and to select values. Modify the selected fields using the PgUP/PgDN keys. Press the <F1> "Help" key for information on the available options:

### Clear NVRAM: [No]

This item allows you to clear NVRAM during system Boot.

### **Plug & Play O/S: [No]**

No: lets the BIOS configure all the devices in the system.

Yes: lets the OS configure Plug & Play devices not required for boot if your system has a Plug & Play operating system.

### **PCI Latency Timer: [64]**

This item allows you to select the value in units of PCI clocks for the PCI device latency timer register. This setting controls how many PCI clocks each PCI device can hold the bus before another PCI device takes over.

### **Allocate IRQ to PCI VGA: [Yes]**

BIOS assigns an IRQ to PCI VGA card if the card requests for an IRQ.

### **Palette Snooping: [Disabled]**

This item allows you to enable or disable the feature. When set to [Enabled], the palette snooping feature informs the PCI devices that an ISA graphics device is installed in the system so that the device can function correctly.

### **OffBoard PCI/ISA IDE Card: [Auto]**

Some PCI IDE cards may require this to be set to the PCI slot number that is holding the card.

### **IRQ 3/4/5/7/9/10/11/14/15: [Available]**

Available: the specified IRQ is available for use by PCI/PnP devices.

Reserved: the specified IRQ is reserved for use by legacy ISA devices.

### **DMA Channel 0/1/3/5/6/7: [Available]**

Available: the specified DMA is available for use by PCI/PnP devices.

Reserved: the specified DMA is reserved for use by legacy ISA devices.

### **Reserved Memory Size: [Disabled]**

This item allows you to select the reserved memory for legacy ISA devices.

3. After you have finished with the PCIPnP Setup, press the <ESC> key to return to the main menu.

**Quick Boot: [Enabled]**

This item allows BIOS to skip certain tests (POST, Power On Self Tests) while booting. This will decrease the time needed to boot the system.

**Quiet Boot: [Disabled]**

This item allows you to enable or disable the full screen logo display feature. Disabled: displays normal POST messages.

**AddOn ROM Display Mode: [Force BIOS]**

Allows you to set the display mode for option ROM.

**Bootup Num-Lock: [On]**

Allows you to select the Power-on state for the Num-Lock.

**PS/2 Mouse Support: [Auto]**

Allows you to select support for PS/2 mouse.

**Wait For 'F1' If Error: [Disabled]**

Waits for F1 key to be pressed if error occurs.

**Hit 'DEL' Message Display: [Enabled]**

Displays "Press DEL to run Setup" in POST.

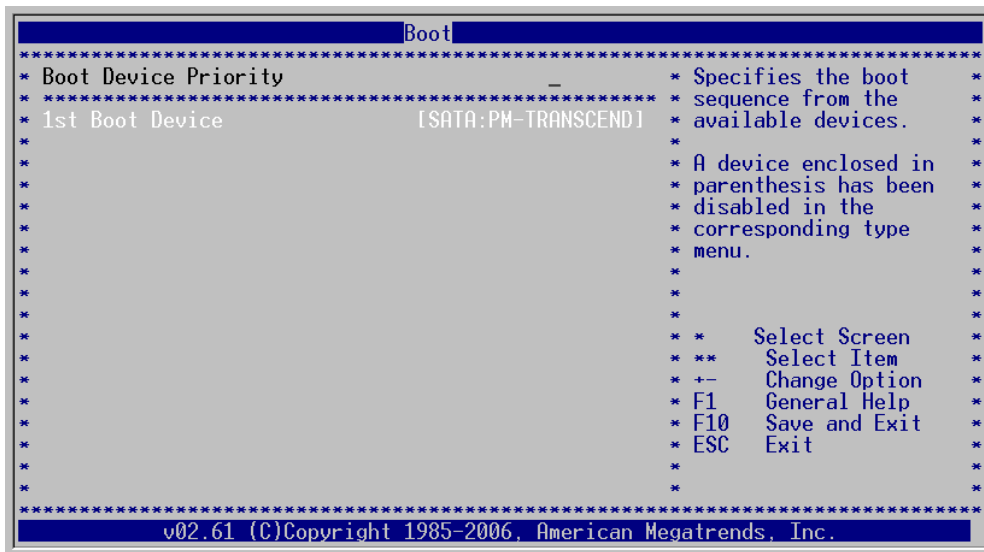

**Interrupt 19 Capture: [Disabled]**

This item allows the option ROMs to trap Interrupt 19.

# User's Manual

## 4.6.2 Boot Device Priority

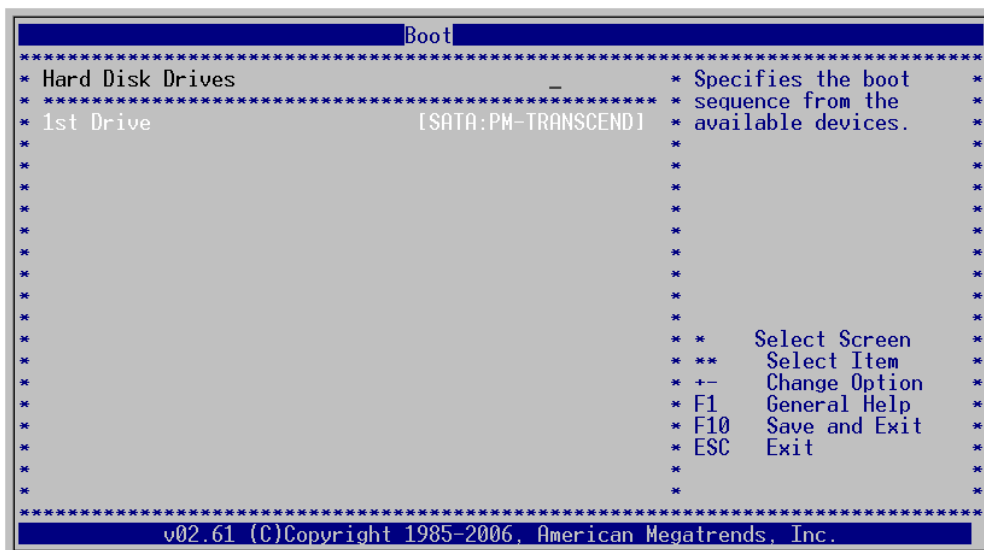

This item is used to boot device priority setting with below sub menus:

### 1st Boot Device: [SATA: PM-TRANSCEND]

This item allows you to set the boot priority. Specifies the boot sequence from the available devices. A device enclosed in parenthesis has been disabled in the corresponding type menu.

## 4.6.3 Hard Disk Drives

### 1st Drive: [SATA: PM-TRANSCEND]

This item is used to specify the boot sequence from available devices.

## 4.9 Exit

The item allows you to save or discard your changes to the BIOS items, and load the optimal defaults or failsafe defaults for the BIOS items.

↓ Use the Exit option as follows:

1. Choose "Exit" from the main menu, the following screen appears.

2. Move between items and select values by using the arrow keys. Modify the selected fields using the PgUP/PgDN keys. For information on the various options, please press <F1> key.
3. Please press the <ESC> key to return the main menu after finishing with the Exit Options.

### Save Changes and Exit:

Save changes of values to CMOS and exit the CMOS setup program. F10 key can be used for this operation.

### Discard Changes and Exit:

Discard all CMOS changes and exit the CMOS setup program. ESC key can be used for this operation.

### Discard Changes:

Discard all CMOS changes and load the previously saved values. F7 key can

be used for this operation.

**Load Optimal Defaults:**

This item allows you to load optimal defaults for each of the parameters on the Setup menus, which will provide the best performance settings for your system. F9 key can be used for this operation.

**Load Failsafe Defaults:**

This item allows you to load failsafe defaults for each of the parameters on the Setup menus, which will provide the most stable performance settings. F8 key can be used for this operation.

## Chapter 5. Utility & Driver Installation

Please install the GbE modules properly before you install the OS, driver or other software.

### 5.1 Operation System Supporting

PL-8000 can support Windows® and Linux® operation system as follows. Before installation, please check your OS version. If your OS is not in the following list, please upgrade your OS version.

OS	Version
DOS	DOS 6.22
Windows®	Windows® XP SP3/SP2, Window® Embedded
Linux®	RedHat Enterprise 5.0 (Kernel 2.6.28)

### 5.2 System Driver Installation

PL-8000 offers the system driver in the setup CD. Please install the driver following the procedures.

## **5.3 LAN Driver Installation**

PL-8000 offers the LAN driver in the setup CD. Please click the Autorun file and install the driver following the procedures.

1. Insert the setup CD of PL-8000 into your CD-ROM drive.
2. Choose the Drivers file to click the Autorun icon.
3. Follow the procedures to finish the installation.

## Appendix A: Programming the Watchdog Timer

The PL-8000 provides a Watchdog Timer that resets the CPU or enable LAN by-pass mode. This function ensures greater system reliability in industrial stand-alone and unmanned environments.

In order to enable the Watchdog Timer, you have to output the value of the Watchdog Timer interval to the controller. The value range is from 01H to FFH, and the related time Watchdog Timer interval is 1 sec to 255 sec.

Data	Timer interval
00	Disabled
01	1 sec
02	2 sec
*	*
*	*
FF	255 sec

If you want to disable the Watchdog Timer, just set the timer interval value to 00H.

After setting the timer interval value, the Watchdog Timer begins to count down. You have to refresh the Watchdog Timer, so that the Watchdog Timer will return to its initial value; otherwise, your system will reset after a time-out. The following program shows how to set the Watchdog Timer:

# User's Manual

ASSEMBLY LANGUAGE

DOS DEBUG

**Program 1:** Initializing the Watchdog Timer controller

MOV DX,2EH	O 2E 87
MOV AL,87H	O 2E 87
OUT DX,AL	
OUT DX,AL	
MOV DX,2EH	O 2E 07
MOV AL,07H	O 2F 08
OUT DX,AL	
MOV DX,2FH	
MOV AL,08H	
OUT DX,AL	
MOV DX,2EH	O 2E 30
MOV AL,30H	O 2F 01
OUT DX,AL	
MOV DX,2FH	
MOV AL,01H	
OUT DX,AL	

**Program 2:** Writing a Watchdog Timer interval value

MOV DX,2EH ;Set timer interval value to xx seconds	O 2E F6
MOV AL,F6H	O 2F XX
OUT DX,AL	O 2E AA
MOV DX,2FH	
MOV AL,XXH ; Timer interval *** see note ***	
OUT DX,AL	
MOV DX,2EH	
MOV AL,AAH	
OUT DX,AL	

## Program 3: Disable the Watchdog Timer

MOV DX,2EH	O 2E 87
MOV AL,87H	O 2E 87
OUT DX,AL	
OUT DX,AL	
MOV DX,2EH ;Set timer interval value to 0 seconds	O 2E F6
MOV AL,F6H	O 2F 00
OUT DX,AL	O 2E AA
MOV DX,2FH	
MOV AL,00H ; Timer interval 00H,(= disable)	
OUT DX,AL	
MOV DX,2EH	
MOV AL,AAH	
OUT DX,AL	

*Note: This XX value range is from 01H to FFH, and the related Watchdog Timer interval is 1 sec. to 255 sec. (as in the previous description).*

## Using the Demo Program

Update the System BIOS as follows:

1. Run Program 1
2. Run Program 2 (load the timer interval of 1EH, 30 seconds)
3. Run your Application Program #1 (**Be sure your Application Program will finish within 30 seconds**)
4. Run Program 3 (Load the timer interval of 00H, and disable the Watchdog Timer function)

## Appendix B: LAN Bypass Function *(optional)*

The power on default for CN20 & CN21 LAN ports is set to normal state.

### How to control LAN bypass function by Watchdog Timer

Please follow below steps to set the LAN bypass function control by Watchdog Timer:

1. Setup jumper JP4 to 1-2 shorted [default] to enable bypass function.
2. Setup jumper JP1 to 2-3 shorted to enable bypass function by Watchdog Timer.
3. Refer to Appendix A to set timer interval value and enable Watchdog Timer.

After setting the timer interval value, the Watchdog Timer begins to count down. You have to refresh the Watchdog Timer, so that the Watchdog Timer will return to its initial value; otherwise, your system will set CN20 & CN21 LAN ports to bypass state after a time-out.

*Note: Once the Watchdog Timer time-out you need to restart the system to reset the timer.*

### How to control LAN bypass function by GIPO

Please follow below steps to set the LAN bypass function control by GPIO:

1. Setup jumper JP4 to 1-2 shorted [default] to enable bypass mode.
2. Setup jumper JP1 to 1-2 shorted [default] to enable bypass function by GPIO.
3. Refer to the program code and set CN20 & CN21 LAN ports to Bypass state or Normal state.

#### LAN bypass by GPIO

<b>Bypass state:</b>	<b>Normal state:</b>
MOV DX, 050EH IN AX, DX AND AH, NOT 00010000b OUT DX, AX	MOV DX, 050EH IN AX, DX OR AH, 00010000b OUT DX, AX

#### DOS DEBUG

<b>Bypass state:</b>	<b>Normal state:</b>
- O50E 20 // bypass, 0010 0000	-O50E 30 // no bypass, 0011 0000

-I 2F // read value (00 ~ FF)
```

### Program 3: Programming of the GPO

```
-O 2E F1
-O 2F Xx // X= (0 ~ F) output value; x=(0 ~ F) don't care
```

## Appendix D: System Resources

### Interrupt Controller:

The PL-8000 is a fully PC compatible appliance. If you would like to use extra add-on cards, please make sure that the IRQs do not conflict.

Any remaining IRQs then may be assigned to this PCI Bus. You are able to use Microsoft's Diagnostic (MDS.EXE) utility included in Windows directory to see their map.

IRQ	Assignment
IRQ0	Timer
IRQ1	Keyboard
IRQ2	Interrupt rerouting from IRQ8 through IRQ15
IRQ3	COM2
IRQ4	COM1
IRQ5	PCI device/free
IRQ6	PCI device/free
IRQ7	PPT1
IRQ8	RTC
IRQ9	USB Controller
IRQ10	PCI device/free
IRQ11	PCI device/free
IRQ12	PS/2
IRQ13	Coprocessor
IRQ14	IDE Controller
IRQ15	IDE Controller

### DMA Channel Assignment:

Channel 4 is by default used to cascade to two controllers

Channel	Assignment
DMA0	Free
DMA1	Sound Card
DMA2	FDD Controller
DMA3	Free
DMA4	Cascade
DMA5	Free
DMA6	Free
DMA7	Free

# User's Manual

## Memory Map:

The following table indicates memory of PL-8000. The address ranges specify the runtime code length.

### Memory below 1MB (1MB ~ 640KB)

Address Range	Type	Owner
A0000 ~ AFFFF	ISA	VGA Adapter
B0000 ~ BFFFF	ISA	VGA Adapter
C0000 ~ C79FF	ISA	Adapter ROM
F0000 ~ FFFFF	ISA	System BIOS

### Memory above 1MB (1MB ~ 128960KB)

Address Range	Type	Owner
D0000000~D3FFFFFF7	PCI	Host Bridge
D4000000~D5FFFFFFF	PCI	PCI-PCI Bridge
D6000000~D6FFFFFFF	PCI	PCI-PCI Bridge

## System Memory Map

Start High	Start Low	Size High	Size	Type
00000000	00000000	00000000	0009FC00	Available
00000000	0009FC00	00000000	00000400	Reserved
00000000	000F0000	00000000	00010000	Reserved
00000000	FEC00000	00000000	01400000	Reserved
00000000	00100000	00000000	07EF0000	Available
00000000	07FF3000	00000000	0000D000	ACPI Space
00000000	07FF0000	00000000	00003000	NVS Space

# User's Manual

## I/O Map:

The addresses shown in the table are typical locations

I/O Port	Assignment
0 ~ F	AT DMA controller
20 ~ 21	AT interrupt controller
40 ~ 43	8254 Compatible Programmable Timer
60	IBM Enhanced keyboard controller
61	AT Style Speaker
64	IBM Enhanced keyboard controller
70 ~ 71	Real Time Clock
81 ~ 83	AT DMA controller
87	AT DMA controller
89 ~ 8B	AT DMA controller
8F ~ 91	AT DMA controller
A0 ~ A1	AT interrupt controller
C0 ~ DF	AT DMA controller
F0 ~ FF	Math Coprocessor
170 ~ 177	IDE Controller
1F0 ~ 1F7	IDE Controller
200 ~ 207	Game port
220 ~ 22E	Sound Card
2F8 ~ 2FF	COM2
376	IDE Controller
378 ~ 37A	LPT1
3B0 ~ 3BB	VGA Adapter
3C0 ~ 3DF	VGA Adapter
3F0 ~ 3F5	FDD Controller
3F6	IDE Controller
3F7	FDD Controller
3F8 ~ 3FF	COM1
480 ~ 48F	PCI Bus
4D0 ~ 4D1	PCI Bus
CF8 ~ CFF	PCI Bus
4000 ~ 407F	PCI Bus
4080 ~ 40FF	PCI Bus
5000 ~ 501F	PCI Bus

## User's Manual

---

6000 ~ 607F	PCI Bus
D000 ~ D00E	IDE Controller
D400 ~ D41E	USB Controller
D800 ~ D81E	USB Controller
DC00~ DCFE	Multimedia Audio
E000 ~ E002	Multimedia Audio
E400 ~ E402	Multimedia Audio
