

# MLC Capacitors

Standard range - 10Vdc to 6kVdc

X8R High Temperature capacitors

TCC/VCC capacitors

High Q capacitors

Copper Barrier capacitors

Open Mode and Tandem capacitors

IECO-CECC range

AEC-Q200 range

S02A Space grade range

Safety Certified capacitors

250Vac Non Safety rated AC capacitors

115Vac 400Hz & DWV ranges

LCD Inverter chip range

E01 & E07 feedthrough chip capacitors

X2Y Integrated Passive Components

Radial Leaded capacitors

First in the market with flexible polymer terminations - the revolutionary FlexiCap™ capacitors - our capacitor range also includes X8R high temperature types, High Q capacitors and other application specific types. Our renowned high voltage MLCC expertise has led to the development of an impressive range with working voltage capability up to 10kV. This includes surface mount Class 'X' and 'Y' approved Safety Certified capacitors, 0603 chips with working voltages up to 500V, and 0805 types up to 1kV.

As part of the Dover Ceramic & Microwave Products group (CMP), we are able to offer unrivalled product quality with short lead-times, backed up by excellent sales and technical support. With a commitment to product innovation, new ranges are continually being developed.

Our experienced applications engineers are also available to provide custom solutions for specific applications. This catalogue details the standard ranges but we can provide items such as tight tolerance, low profile and non standard sizes on request. Flexibility is key, not only in design but in all aspects of customer service and support.

Our quality management systems meet international requirements, with approval to ISO 9001, environmental approval to ISO 14001 and Occupational Health and Safety approval to OHSAS 18001. Product approvals include, IECQ-CECC, UL, TÜV and qualification to AEC-Q200. SPC is used extensively, supported by Continuous Improvement Programmes, 6 Sigma projects and Lean Manufacturing initiatives.

**Products**

Syfer's excellence in ceramic materials technology, has enabled us to offer an unrivalled range of multilayer ceramic products including:

- Multilayer ceramic chip capacitors
- High voltage MLCCs
- FlexiCap™ capacitors with flexible terminations
- Class 'X' and 'Y' SMD Safety Certified capacitors
- Radial leaded capacitors
- AEC-Q200 qualified capacitors
- IECQ CECC approved capacitors and radials
- Capacitors for space applications
- High Q capacitors
- Non Magnetic capacitors
- 3 terminal EMI chips
- X2Y Integrated Passive Components
- Capacitors for medical applications

**Benefits**

- High quality and reliability
- World-leading high voltage expertise
- Suitable for the most demanding applications including: automotive, aerospace, military, space and medical
- Approvals to international specifications
- Continual product improvement and innovation
- Tight tolerances available
- Large case sizes, up to 8060
- Custom product capability
- Strong technical support
- Short lead-times
- Environmentally responsible

Suffix code controlled items such as Low profile, defined thickness and custom lead forms available by special request.

**Other Syfer products**

- Surface mount Pi filters
- Panel mount threaded filters
- Panel mount solder-in filters
- Custom filter assembly capability
- Varistor filters
- Discoidal capacitors
- Planar capacitor and planar varistor arrays
- EMI Power Filters
- Hermetically sealed EMI filters

**Syfer - Innovative, World-Class Ceramic Capacitors**

Multilayer Ceramic Capacitors are generally divided into classes which are defined by the capacitance temperature characteristics over specified temperature ranges. These are designated by alpha numeric codes. Code definitions are summarised below and are also available in the relevant national and international specifications.

**COG/NPO - Ultra Stable Class 1 Ceramic (EIA Class 1)**

Spec.	Classification	Temperature range °C	Maximum capacitance change	Syfer dielectric code
CECC	1B/CG	-55 +125	0 ± 30ppm/°C	C
EIA	COG/NPO	-55 +125	0 ± 30ppm/°C	C
MIL	CG (BP)	-55 +125	0 ± 30ppm/°C	C

Capacitors within this class have a dielectric constant range from 10 to 100. They are used in applications which require ultra stable dielectric characteristics with negligible dependence of capacitance and dissipation factor with time, voltage and frequency. They exhibit the following characteristics:-

- a) Time does not significantly affect capacitance and dissipation factor (Tan δ) – no ageing.
- b) Capacitance and dissipation factor are not affected by voltage.
- c) Linear temperature coefficient.

**X8R, X7R and X5R - Stable Class II Ceramic (EIA Class II)**

Spec.	Classification	Temperature range °C	Maximum capacitance change % over temperature range		Syfer dielectric code
			No DC volt applied	Rated DC Volt	
CECC	2C1	-55 +125	±20	+20 -30	R
	2R1	-55 +125	±15	- -	X
	2X1	-55 +125	±15	+15 -25	B
EIA	X8R	-55 +150	±15	- -	N
	X7R	-55 +125	±15	- -	X
	X5R	-55 +85	±15	- -	P
MIL	BX	-55 +125	±15	+15 -25	B
	BZ	-55 +125	±20	+20 -30	R

Capacitors of this type have a dielectric constant range of 1000-4000, and also have a non-linear temperature characteristic which exhibits a dielectric constant variation of less than ±15% (2R1) from its room temperature value, over the specified temperature range. Generally used for by-passing (decoupling), coupling, filtering, frequency discrimination, DC blocking and voltage transient suppression

with greater volumetric efficiency than Class I units, whilst maintaining stability within defined limits. Capacitance and dissipation factor are affected by:-  
 Time (Ageing)  
 Voltage (AC or DC)  
 Frequency

**Typical dielectric temperature characteristics**

Stable X7R dielectric

Ageing

Capacitor ageing is a term used to describe the negative, logarithmic capacitance change which takes place in ceramic capacitors with time. The crystalline structure for barium titanate based ceramics changes on passing through its Curie temperature (known as the Curie Point) at about 125°C. This domain structure relaxes with time and in doing so, the dielectric constant reduces logarithmically; this is known as the ageing mechanism of the dielectric constant. The more stable dielectrics have the lowest ageing rates.

The ageing process is reversible and repeatable. Whenever the capacitor is heated to a temperature above the Curie Point the ageing process starts again from zero.

The ageing constant, or ageing rate, is defined as the percentage loss of capacitance due to the ageing process of the dielectric which occurs during a decade of time (a tenfold increase in age) and is expressed as percent per logarithmic decade of hours. As the law of decrease of capacitance is logarithmic, this means that in a capacitor with an ageing rate of 1% per decade of time, the capacitance will decrease at a rate of:

- a) 1% between 1 and 10 hours
- b) An additional 1% between the following 10 and 100 hours
- c) An additional 1% between the following 100 and 1000 hours
- d) An additional 1% between the following 1000 and 10000 hours etc
- e) The ageing rate continues in this manner throughout the capacitor's life.

Typical values of the ageing constant for our Multilayer Ceramic Capacitors are:

Dielectric class	Typical values
Ultra Stable COG/NP0	Negligible capacitance loss through ageing
Stable X7R	<2 % per decade of time

Capacitance measurements

Because of ageing it is necessary to specify an age for reference measurements at which the capacitance shall be within the prescribed tolerance. This is fixed at 1000 hours, since for practical purposes there is not much further loss of capacitance after this time.

All capacitors shipped are within their specified tolerance at the standard reference age of 1000 hours after having cooled through their Curie temperature.

The ageing curve for any ceramic dielectric is a straight line when plotted on semi-log paper.

Capacitance vs time

(Ageing X7R @ 1% per decade)

Tight tolerance

One of the advantages of Syfer's unique 'wet process' of manufacture is the ability to offer capacitors with exceptionally tight capacitance tolerances.

The accuracy of the printing screens used in the fully automated, computer controlled manufacturing process allows for tolerance as close as +/-1% on COG/NP0 parts greater than or equal to 10pF. For capacitance values below 10pF, tolerances can be as tight as +/-0.05pF.

Production process flowchart

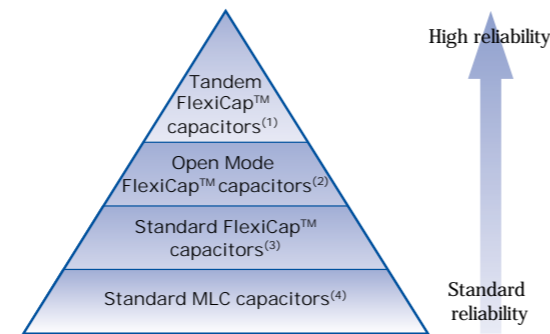

Syfer reliability grades

Notes:

- (1) Space grade tested in accordance with ESCC 3009. Refer to Syfer specification SO2A 0100.
- (2) MIL Grade. Released in accordance with US standards available on request.
- (3) IECQ-CECC. The International Electrotechnical Commission (IEC) Quality Assessment System for Electronic Components. This is an internationally recognised product quality certification which provides customers with assurance that the product supplied meets high quality standards. View Syfer's IECQ-CECC approvals at <http://www.iecq.org> or at [www.syfer.com](http://www.syfer.com)
- (4) AEC-Q200. Automotive Electronics Council Stress Test Qualification For Passive Components. Refer to Syfer application note reference AN0009.

Syfer reliability surface mount product groups

Notes:

- (1) "Tandem" construction capacitors, ie internally having the equivalent of 2 series capacitors. If one of these should fail short-circuit, there is still capacitance end to end and the chip will still function as a capacitor, although capacitance maybe affected. Refer to application note AN0021. Also available qualified to AEC-Q200.
- (2) "Open Mode" capacitors with FlexiCap™ termination also reduce the possibility of a short circuit by utilising inset electrode margins. Refer to application note AN0022. Also available qualified to AEC-Q200.
- (3) Multilayer capacitors with Syfer FlexiCap™ termination. By using FlexiCap™ termination, there is a reduced possibility of the mechanical cracking occurring.
- (4) "Standard" capacitors includes MLCCs with tin finish over nickel, but no FlexiCap™.

FlexiCap™ termination

MLCCs are widely used in electronic circuit design for a multitude of applications. Their small package size, technical performance and suitability for automated assembly makes them the component of choice for the specifier.

However, despite the technical benefits, ceramic components are brittle and need careful handling on the production floor. In some circumstances they may be prone to mechanical stress damage if not used in an appropriate manner. Board flexing, depanelisation, mounting through hole components, poor storage and automatic testing may all result in cracking.

Careful process control is important at all stages of circuit board assembly and transportation - from component placement to test and packaging. Any significant board flexing may result in stress fractures in ceramic devices that may not always be evident during the board assembly process. Sometimes it may be the end customer who finds out - when equipment fails!

Syfer has the solution - FlexiCap™

FlexiCap™ has been developed as a result of listening to customers' experiences of stress damage to MLCCs from many manufacturers, often caused by variations in production processes.

Our answer is a proprietary flexible epoxy polymer termination material, that is applied to the device under the usual nickel barrier finish. FlexiCap™ will accommodate a greater degree of board bending than conventional capacitors.

Syfer FlexiCap™ termination

All ranges are available with FlexiCap™ termination material offering increased reliability and superior mechanical performance (board flex and temperature cycling) when compared with standard termination materials. Refer to Syfer application note reference AN0001. FlexiCap™ capacitors enable the board to be bent almost twice as much before mechanical cracking occurs. Refer to application note AN0002.

FlexiCap™ is also suitable for Space applications having passed thermal vacuum outgassing tests. Refer to Syfer application note reference AN0026.

FlexiCap™ benefits

With traditional termination materials and assembly, the chain of materials from bare PCB to soldered termination, provides no flexibility. In circumstances where excessive stress is applied - the weakest link fails. This means the ceramic itself, which may fail short circuit.

The benefit to the user is to facilitate a wider process window - giving a greater safety margin and substantially reducing the typical root causes of mechanical stress cracking.

FlexiCap™ may be soldered using your traditional wave or reflow solder techniques and needs no adjustment to equipment or current processes.

Syfer has delivered millions of FlexiCap™ components and during that time has collected substantial test and reliability data, working in partnership with customers world wide, to eliminate mechanical cracking.

An additional benefit of FlexiCap™ is that MLCCs can withstand temperature cycling -55°C to 125°C in excess of 1,000 times without cracking.

FlexiCap™ termination has no adverse effect on any electrical parameters, nor affects the operation of the MLCC in any way.

Picture taken at 1,000x magnification using a SEM to demonstrate the fibrous nature of the FlexiCap™ termination that absorbs increased levels of mechanical stress.

Available on the following ranges:

- All High Reliability ranges
- Standard and High Voltage chips
- Safety Certified capacitor chips
- 3 terminal EMI chips
- X2Y Integrated Passive Components
- X8R High Temperature capacitors

Summary of PCB bend test results

The bend tests conducted on X7R have proven that the FlexiCap™ termination withstands a greater level of mechanical stress before mechanical cracking occurs.

The AEC-Q200 test for X7R requires a bend level of 2mm minimum and a cap change of less than 10%.

Product X7R	Typical bend performance under AEC-Q200 test conditions
Standard termination	2mm to 3mm
FlexiCap™	Typically 8mm to 10mm

Application notes

FlexiCap™ may be handled, stored and transported in the same manner as standard terminated capacitors. The requirements for mounting and soldering FlexiCap™ are the same as for standard SMD capacitors.

For customers currently using standard terminated capacitors there should be no requirement to change the assembly process when converting to FlexiCap™.

Based upon board bend tests in accordance with IEC 60384-1 the amount of board bending required to mechanically crack a FlexiCap™ terminated capacitor is significantly increased compared with standard terminated capacitors.

It must be stressed however, that capacitor users must not assume that the use of FlexiCap™ terminated capacitors will totally eliminate mechanical cracking. Good process controls are still required for this objective to be achieved.

Periodic tests conducted and reliability data availability

Standard Surface Mount c apacitors

Components are randomly selected on a sample basis and the following routine tests are conducted:

- Load Test. 1,000 hours @125°C (150°C for X8R). Applied voltage depends on components tested.
- Humidity Test. 168 hours @ 85°C/85%RH.
- Board Deflection (bend test).

Test results are available on request.

Conversion factors

From	To	Operation
<b>FITS</b>	MTBF (hours)	$10^9 \div \text{FITS}$
<b>FITS</b>	MTBF (years)	$10^9 \div (\text{FITS} \times 8760)$

FITS = Failures in  $10^9$  hours.  
MTBF = Mean time between failures.

REACH (Registration, Evaluation, Authorisation and restriction of Chemicals) statement

The main purpose of REACH is to improve the protection of human health and the environment from the risks arising from the use of chemicals.

Syfer Technology Ltd maintains both ISO14001, Environmental Management System and OHSAS 18001 Health and Safety Management System approvals that require and ensure compliance with corresponding legislation such as REACH.

For further information, please contact Syfer at sales@syfer.co.uk

RoHS compliance

Syfer routinely monitors world wide material restrictions (e.g. EU / China & Korea RoHS mandates) and is actively involved in shaping future legislation.

Export controls and dual-use regulations

Certain Syfer catalogue components are defined as 'dual-use' items under international export controls - those that can be used for civil or military purposes which meet certain specified technical standards.

The defining criteria for a dual-use component with respect to Syfer products is one with a voltage rating of >750V and a capacitance value >250nF and a series inductance <10nH. Components defined as 'dual-use' under the above criteria

Example of FIT (Failure In Time) data available:

Component type: 0805 (COG/NP0 and X7R).  
Testing location: Syfer reliability test department.  
Results based on: 16,622,000 component test hours.

All standard Syfer MLCC products are compliant with the EU RoHS directive 2002/95/EC (see below for special exceptions) and those with plated terminations are suitable for soldering using common Pb free solder alloys (refer to 'Soldering Information' for more details on soldering limitations). Compliance with EU 2002/95/EC automatically signifies compliance with some other legislation (e.g. Korea RoHS). Please refer to Syfer for details of compliance with other materials legislation

Breakdown of material content, SGS analysis reports and tin whisker test results are available on request.

Most Syfer MLCC components are available with non RoHS compliant tin lead (SnPb) solderable termination finish by special request for exempt applications and where pure tin is not acceptable. Other tin free termination finishes may also be available – please refer to Syfer for further details.

Radial components have tin plated leads as standard, but tin/lead is available as a special option. Please refer to the radial section of the catalogue for further details.

automatically require a licence for export outside the EU, and may require a licence for export within the EU.

The application for a licence is routine, but customers for these products will be asked to supply further information.

Please refer to sales if you require any further information on export restrictions.

Other special components may additionally need to comply with export regulations.

## Periodic tests conducted for IECQ-CECC and AEC-Q200

Test ref	Test	Termination type	Additional requirements	Sample acceptance			Reference
				P	n	c	
P1	High temperature exposure (storage)	All types	Un-powered. 1,000 hours @ T=150°C. Measurement at 24 ± 2 hours after test conclusion	12	77	0	MIL-STD-202 Method 108

P = Period in months.  
N = Sample size.  
C = Acceptance criteria.

Detailed application notes intended to guide and assist our customers in using multilayer ceramic capacitors in surface mount technology are available on the Syfer website [www.syfer.com](http://www.syfer.com)

The information concentrates on the handling, mounting, connection, cleaning, test and re-work requirements particular to MLC's for SMD technology, to ensure a suitable match between component capability and user expectation. Some extracts are given below.

**Handling**

Ceramics are dense, hard, brittle and abrasive materials. They are liable to suffer mechanical damage, in the form of chips or cracks, if improperly handled.

Terminations may be abraded onto chip surfaces if loose chips are tumbled in bulk. Metallic tracks may be left on the chip surfaces which might pose a reliability hazard.

Components should never be handled with fingers; perspiration and skin oils can inhibit solderability and will aggravate cleaning.

Chip capacitors should never be handled with metallic instruments. Metal tweezers should never be used as these can chip the product and may leave abraded metal tracks on the product surface. Plastic or plastic coated metal types are readily available and recommended - these should be used with an absolute minimum of applied pressure.

Counting or visual inspection of chip capacitors is best performed on a clean glass or hard plastic surface.

If chips are dropped or subjected to rough handling, they should be visually inspected before use. Electrical inspection may also reveal gross damage via a change in capacitance, an increase in dissipation factor or a decrease either in insulation resistance or electrical strength.

**Transportation**

Where possible, any transportation should be carried out with the product in its unopened original packaging. If already opened, any environmental control agents supplied should be returned to packaging and the packaging re-sealed.

Avoid paper and card as a primary means of handling, packing, transportation and storage of loose components. Many grades have a sulphur content which will adversely affect termination solderability.

Loose chips should always be packed with sulphur-free wadding to prevent impact or abrasion damage during transportation.

**Storage**

Incorrect storage of components can lead to problems for the user. Rapid tarnishing of the terminations, with an associated degradation of solderability, will occur if the product comes into contact with industrial gases such as sulphur dioxide and chlorine. Storage in free air, particularly moist or polluted air, can result in termination oxidation.

Packaging should not be opened until the MLC's are required for use. If opened, the pack should be re-sealed as soon as is practicable. Alternatively, the contents could be kept in a sealed container with an environmental control agent.

Long term storage conditions, ideally, should be temperature controlled between -5 and +40°C and humidity controlled between 40 and 60% R.H.

Taped product should be stored out of direct sunlight, which might promote deterioration in tape or adhesive performance.

Product, stored under the conditions recommended above, in its "as received" packaging, has a minimum shelf life of 2 years.

**Mechanical considerations for mounted ceramic chip capacitors**

Due to their brittle nature, ceramic chip capacitors are more prone to excesses of mechanical stress than other components used in surface mounting.

One of the most common causes of failure is directly attributable to bending the printed circuit board after solder attachment. The excessive or sudden movement of the flexible circuit board stresses the inflexible ceramic block causing a crack to appear at the weakest point, usually the ceramic/termination interface. The crack may initially be quite small and not penetrate into the inner electrodes; however, subsequent handling and rapid changes in temperature may cause the crack to enlarge.

This mode of failure is often invisible to normal inspection techniques as the resultant cracks usually lie under the capacitor terminations but if left, can lead to catastrophic failure. More importantly, mechanical cracks, unless they are severe may not be detected by normal electrical testing of the completed circuit, failure only occurring at some later stage after moisture ingress.

The degree of mechanical stress generated on the printed circuit board is dependent upon several factors including the board material and thickness; the amount of solder and land pattern. The amount of solder applied is important, as an excessive amount reduces the chip's resistance to cracking.

It is Syfer's experience that more than 90% are due to board depanelisation, a process where two or more circuit boards are separated after soldering is complete. Other manufacturing stages that should be reviewed include:

- 1) Attaching rigid components such as connectors, relays, display panels, heat sinks etc.
- 2) Fitting conventional leaded components. Special care must be exercised when rigid terminals, as found on large can electrolytic capacitors, are inserted.
- 3) Storage of boards in such a manner which allows warping.
- 4) Automatic test equipment, particularly the type employing "bed of nails" and support pillars.
- 5) Positioning the circuit board in its enclosure especially where this is a "snap-fit".

Syfer were the first MLCC manufacturer to launch a flexible termination to significantly reduce the instances of mechanical cracking. Flexicap™ termination introduces a certain amount of give into the termination layer absorbing damaging stress. Unlike similar systems, Flexicap™ does not tear under tension, but absorbs the stress, so maintaining the characteristics of the MLCC.

**SM Pad Design**

Syfer conventional 2-terminal chip capacitors can generally be mounted using pad designs in accordance with IPC-7351, Generic Requirements for Surface Mount Design and Land Pattern Standards, but there are some other factors that have been shown to reduce mechanical stress, such as reducing the pad width to less than the chip width. In addition, the position of the chip on the board should also be considered.

3-Terminal components are not specifically covered by IPC-7351, but recommended pad dimensions are included in the Syfer catalogue / website for these components.

**Soldering information**

Syfer MLCC's are compatible with all recognised soldering/ mounting methods for chip capacitors. A detailed application note is available on-line at [www.syfer.com](http://www.syfer.com)

**Reflow soldering surface mount chip capacitors**

Syfer recommend reflow soldering as the preferred method for mounting MLCC's. Syfer MLCC's can be reflow soldered using a reflow profile generally as defined in IPC / JEDEC J-STD-020. Sn/Ni plated termination chip capacitors are compatible with both conventional and lead free soldering, with peak temperatures of 260°C to 270°C acceptable.

The heating ramp rate should be such that components see a temperature rise of 1.5°C to 4°C per seconds to maintain temperature uniformity through the MLCC.

The time for which the solder is molten should be maintained at a minimum, so as to prevent solder leaching. Extended times above 230°C can cause problems with oxidation of Sn plating. Use of inert atmosphere can help if this problem is encountered. PdAg terminations can be particularly susceptible to leaching with lead free, tin rich solders and trials are recommended for this combination.

Cooling to ambient temperature should be allowed to occur naturally, particularly if larger chip sizes are being soldered. Natural cooling allows a gradual relaxation of thermal mismatch stresses in the solder joints. Forced cooling should be avoided as this can induce thermal breakage.

**Wave soldering Chip and Radial Leaded capacitors**

Wave soldering is generally acceptable, but the thermal stresses caused by the wave have been shown to lead to potential problems with larger or thicker chips. Particular care should be taken when soldering SM chips larger than size 1210 and with a thickness greater than 1.0mm for this reason. Maximum permissible wave temperature is 270°C for SM chips and 260°C for Radial Leaded capacitors.

The total immersion time in the solder should be kept to a minimum. It is strongly recommended that Sn/Ni plated terminations are specified for wave soldering applications. PdAg termination is particularly susceptible to leaching when subjected to lead free wave soldering and is not generally recommended for this application.

Total immersion exposure time for Sn/Ni terminations is 30s at a wave temperature of 260°C. Note that for multiple soldering operations, including the rework, the soldering time is cumulative.

The pre-heat ramp should be such that the components see a temperature rise of 1.5°C to 4°C per second as for reflow soldering. This is to maintain temperature uniformity through the MLCC and prevent the formation of thermal gradients within the ceramic. The preheat temperature should be within 120°C maximum (100°C preferred) of the maximum solder temperature to minimise thermal shock.

Cooling to ambient temperature should be allowed to occur naturally, particularly if larger chip sizes are being soldered. Natural cooling allows a gradual relaxation of thermal mismatch stresses in the solder joints. Forced cooling should be avoided as this can induce thermal breakage.

**Rework of Chip capacitors**

Syfer recommend hot air/ gas as the preferred method for applying heat for rework. Apply even heat surrounding the component to minimise internal thermal gradients. Soldering irons or other techniques that apply direct heat to the chip or surrounding area, should not be used as these can result in micro cracks being generated.

Minimise the rework heat duration and allow components to cool naturally after soldering.

**Hand soldering Radial Leaded capacitors**

Radial capacitors can be hand soldered into boards using soldering irons, provided care is taken not to touch the body of the capacitor with the iron tip. Soldering should be carried out from the opposite side of the board to the radial to minimise the risk of damage to the capacitor body. Where possible, a heat sink should be used between the solder joint and the body, especially if longer dwell times are required.

**Use of silver loaded epoxy adhesives**

Chip capacitors can be mounted to circuit boards using silver loaded adhesive provided the termination material of the capacitor is selected to be compatible with the silver loaded adhesive. This is normally PdAg. Standard tin finishes are often not recommended for use with silver loaded epoxies as there can be electrical and mechanical issues with the joint integrity due to material mismatch.

**Solder leaching**

Leaching is the term for the dissolution of silver into the solder causing a failure of the termination system which causes increased ESR, tan δ and open circuit faults, including ultimately the possibility of the chip becoming detached. Leaching occurs more readily with higher temperature solders and solders with a high tin content. Pb free solders can be very prone to leaching certain termination systems. To prevent leaching, exercise care when choosing solder alloys and minimize both maximum temperature and dwell time with the solder molten.

Plated terminations with nickel or copper anti leaching barrier layers are available in a range of top coat finishes to prevent leaching occurring. These finishes also include Syfer FlexiCap™ for improved stress resistance post soldering.

**Multilayer ceramic chip - with nickel barrier termination**

- X7R, COG/NPO 4.7pF to 15µF - 10V to 10kV

● FlexiCap™ is particularly recommended for these applications where possible.

A range of dc rated multi-layer chip capacitors from 0.47pF to 22µF and case sizes 0603 to 8060 in COG/NPO and X7R dielectrics. Suitable for all general purpose and high reliability applications where package size and reliability are important. All are manufactured using Syfer's unique wet process and incorporate precious metal electrodes.

The X8R dielectric will operate from -55°C to +150°C, with a maximum capacitance change ±15% (without applied voltage). The devices are available in sizes 0805 to 2225, with voltage ranges from 25V to 250V and capacitance values from 1nF to 1.8µF. The capacitors have been developed by Syfer to meet demand from various applications in the automotive and industrial markets and in other electronic equipment exposed to high temperatures. The increased use of electronics in automotive "under the hood" applications has created demand for this product range. The X8R range incorporates a specially formulated termination with a nickel barrier finish that has been designed to enhance the mechanical performance of these SMD chip capacitors in harsh environments typically present in automotive applications.

**Capacitance Range**  
1.0nF to 1.8µF

**Temperature Coefficient of Capacitance (TCC)**  
± 15% from -55°C to +150°C

**Dissipation Factor (DF)**  
≤ 0.025

**Insulation Resistance (IR)**  
100G Ω or 1000secs (whichever is the less).

**Dielectric Withstand Voltage (DWV)**  
2.5 x rated voltage for 5±1 seconds,  
50mA charging current maximum.

**Ageing Rate**  
1% per decade (typical)

Max cap. values according to the rated d.c. voltage

	0805	1206	1210	1812	2220	2225
Min Cap. value	1.0nF	2.2nF	4.7nF	6.8nF	10nF	10nF

### TCC/VCC range

X7R capacitors are available from Syfer with a defined capacitance variation under applied dc voltage, across the full operating temperature range. Whilst the capacitance of COG/NP0 chips does not vary with applied voltage, standard X7R capacitors exhibit capacitance fluctuation, but with no specified limit. For applications where a limit is required, Syfer is able to offer either a "B" code dielectric (conforms to MIL "BX" dielectric and IECQ-CECC "2X1") or "R" code dielectric (conforms to MIL "BZ" dielectric and IECQ-CECC "2C1").

#### 2C1 (BZ) capacitor range

● = FlexiCap™ termination only. Other values available in J, Y and F terminations.

		X7R		
Dielectric characteristics		Stable		
	IECQ-CECC	2C1	2R1	2X1
	EIA	-	X7R	-
	MIL	BZ	-	BX
Rated temperature range		-55°C to +125°C		
Maximum capacitance charge over temperature range		No DC voltage applied		
		±20%	±15%	±15%
		Rated DC voltage applied		
		+20-30%	-	+15-25%
Syfer dielectric ordering code		R	X	B

For part numbering, the "X" denoting the X7R dielectric code needs to be replaced by either "B" or "R". Please contact the Sales Office for full range information.

#### 2X1 (BX) capacitor range

● = FlexiCap™ termination only. Other values available in J, Y and F terminations.

The Syfer MS range offers a very stable, High Q material system that provides excellent, low loss performance in systems below 3GHz. Available in 0402 to 3640 case sizes with various termination options including FlexiCap™, this range of high frequency capacitors is suitable for many applications where economical, high performance is required.

**Operating Temperature**  
-55°C to +125°C

**Temperature Coefficient (Typical)**  
0 ± 30 ppm/°C

**Insulation resistance at +25°C**  
>100GΩ

**Insulation resistance at +125°C**  
>10GΩ

Typical performance data - 1111 chip size\*

\* Refer to the Sales Office for other chip size electrical data.

Multilayer ceramic capacitors with silver/palladium (Ag/Pd) terminations have often been used in medical applications where non-magnetic components are required, for example in MRI equipment. The use of conventional nickel barrier terminations is not suitable due to nickel exhibiting magnetic properties.

However, RoHS requirements have dictated the use of lead-free solders, and the composition of these solders has resulted in an increase in soldering temperatures. This has caused solder leaching problems for the Ag/Pd termination, and meant alternative terminations have had to be found.

As copper is non-magnetic, one solution is to use a copper barrier instead of a nickel barrier, with a tin finish on top, and this is the solution Syfer has developed.

This copper barrier termination is offered with selected non-magnetic COG/NPO, High Q and X7R dielectrics, providing a fully non-magnetic component.

To meet high temperature 260°C soldering reflow

profiles as detailed in J-STD-020, COG/NPO dielectrics are supplied with sintered termination and X7R dielectrics are supplied with Syfer's award winning FlexiCap™ termination.

Open Mode capacitors have been designed specifically for use in applications where mechanical cracking is a severe problem and short circuits due to cracking are unacceptable.

Open Mode capacitors use inset electrode margins, which prevent any mechanical cracks which may form during board assembly from connecting to the internal electrodes.

When combined with Syfer's FlexiCap™ termination, Syfer Open Mode capacitors provide a robust component with the assurance that if a part becomes cracked, the crack will be unlikely to result in short circuit failure.

Open Mode capacitor -

Open Mode max capacitance (X7R only)

	0603	0805	1206	1210	1812	2220	2225
16V	39nF	150nF	470nF	680nF	1.5µF	3.3µF	4.7µF
25V	33nF	120nF	330nF	560nF	1.2µF	2.2µF	3.9µF
50/63V	22nF	100nF	220nF	470nF	1.0µF	1.5µF	2.7µF
100V	6.8nF	27nF	100nF	220nF	680nF	1.0µF	1.8µF
200/250V	2.7nF	15nF	68nF	100nF	330nF	680nF	1.0µF

Qualification included cracking the components by severe bend tests. Following the bend tests cracked components were subjected to endurance / humidity tests, with no failures evident due to short circuits. Note: Depending on the severity of the crack, capacitance loss was between 0% and 70%.

Tandem Capacitors have been designed as a fail safe range using a series section internal design, for use in any application where short circuits would be unacceptable.

When combined with Syfer's FlexiCap™ termination, Syfer Tandem capacitors provide an ultra robust and reliable component, for use in the most demanding applications.

Tandem capacitor -

Tandem max capacitance (X7R only)

	0603	0805	1206	1210	1812	2220	2225

A range of specialist high reliability MLCC's for use in critical or high reliability environments. All fully tested / approved and available with a range of suitable termination options, including tin/lead plating and Syfer Flexicap™.

Ranges include :-

1. Range tested and approved in accordance with IECQ-CECC QC32100.
2. Range qualified to the requirements of AEC-Q200.
3. Range qualified to the requirements of ESCC 3009 European Space Specification.

Notes:  
 (1) Termination **A**, **H** & **F** available for Space applications. If another termination type is required then contact Syfer Sales.  
 (2) Please include Lot Acceptance Test requirement (LAT1, LAT2 or LAT3) on purchase order against each line item.  
 Tests conducted after 100% Burn-In (2xRV @125°C for 168 hours):  
 LAT1: 4 x adhesion, 8 x rapid temp change + LAT2 and LAT3.  
 LAT2: 20 x 1000 hour life test + LAT3.  
 LAT3: 6 x TC and 4 x solderability.

## Safety Certified capacitors

Syfer Technology's Safety Certified capacitors comply with international UL and TÜV specifications to offer designers the option of using a surface mount ceramic multilayer capacitor to replace leaded film types. Offering the benefits of simple pick-and-place assembly, reduced board space required and lower profile, they are also available in a FlexiCap™ version to reduce the risk of mechanical cracking.

Syfer's high voltage capacitor expertise means the range offers among the highest range available of capacitance values in certain case sizes. Applications include: modems, AC-DC power supplies and where lightning strike or other voltage transients represent a threat to electronic equipment.

- Surface mount multilayer ceramic capacitors
- Meet Class Y2/X1, Y3/X2 and X2 requirements
- Approved for mains ac voltages, up to 250Vac
- Approved by UL and TÜV
- Sizes 1808, 1812, 2211, 2215 and 2220
- Smaller sizes suitable for use in equipment certified to EN60950
- Certification specifications for larger sizes include IEC/EN60384, UL/CSA60950 and UL1414
- Surface mount package
- Reduces board area and height restrictions
- Reduced assembly costs over conventional through hole components
- FlexiCap™ option available on all sizes.

Class	Rated voltage	Impulse voltage	Insulation bridging	May be used in primary circuit
Y1	250Vac	8000V	Double or reinforced	Line to protective earth

Industry wide standard multilayer ceramic capacitors are supplied with a DC rating only. For AC use, Surge and Safety capacitors with an AC rating of 250Vac have been available but the capacitance range is limited as a result of the strict impulse and VP requirements in the international standards. Syfer Technology have developed a range which provides a solution for use at up to 250Vac 60Hz continuous use and provides for non safety-critical applications where extended capacitance ranges are required.

Capacitance range

Case sizes 0805 to 2220 are available in both X7R and COG/NPO dielectrics with capacitances of up to 120nF. The capacitance ranges are divided into four groups which are based on the voltage coefficient of capacitance, COG/NPO which has negligible capacitance shift with applied voltage and three subgroups of X7R. Type A with ±30% maximum capacitance shift 0V-240V, Type B with +30% to

-50% maximum capacitance shift 0V-240V and Type C with +30 to -80% maximum capacitance shift 0V to 240V.

Chip size	0805	1206	1210	1808	1812	2220
<b>COG/NPO</b>	1.0pF - 470pF	1.0pF - 1.2nF	4.7pF - 2.2nF	4.7pF - 2.2nF	10pF - 5.6nF	10pF - 10nF
<b>X7R A ±30%</b>	560pF - 1.5nF	1.5nF - 10nF	2.7nF - 22nF	2.7nF - 22nF	6.8nF - 56nF	12nF - 120nF
<b>X7R B +30% -50%</b>	1.8nF - 3.3nF	12nF	27nF	27nF	68nF - 82nF	-
<b>X7R C +30% -80%</b>	3.9nF - 10nF	15nF - 47nF	33nF - 100nF	33nF - 100nF	100nF - 120nF	-

NOTE: X7R A) has a VCC of ± 30% over 0 to 240Vac 50Hz  
X7R B) has a VCC of +30% to -50% over 0 to 240Vac 50Hz  
X7R C) has a VCC of +30% to -80% over 0 to 240Vac 50Hz  
Measurement conditions described in Syfer Application Notes AN0033

## 115Vac 400Hz Capable capacitors

Syfer Technology has conducted reliability testing on standard surface mount ceramic capacitors in order to ensure their performance at 115Vac 400Hz and the associated voltage and frequency transients required by MIL-STD-704. Self heating will occur due to losses in the capacitor but has been measured at less than 25°C rise with neutral mounting conditions at room temperature.

## High Dielectric Withstand Voltage capacitors (DWV range)

The Syfer DWV range is specifically designed for use in applications where a high Dielectric Withstand Voltage (DWV) is required.

These parts have a continuous rated voltage of 500Vdc minimum and are 100% DWV tested at the specified voltages to ensure Flashover (arcing) across the surface does not occur.

- High dielectric withstand voltages (DWV) of 1.5kV and 2.5kV
- These ratings are based on an application of the DWV voltage for a period of up to 60 seconds (where the charging current is limited to 50mA)
- Case sizes 1206 to 2225
- COG/NPO and X7R dielectrics

- Capacitance values from 4.7pF to 120nF
- For full range information please see Syfer web site, or contact our Sales Office.

Syfer Technology has developed a range of surface mount multilayer ceramic capacitors aimed specifically at the LCD inverter market. The advantage gained over standard product is a reduced susceptibility to surface arcing which allows for the replacement of leaded components. The improved properties are achieved by the utilisation of a unique COG/NPO dielectric material.

Parts for these applications are identified with the suffix code FB9.

Users should carefully consider solder pad design as this can influence arcing voltage.

Fourth digit is number of zeros eg. 0101 = 100pF Values are E24 series	<10pF B = ±0.1pF C = ±0.25pF D = ±0.5pF ≥10pF F = ±1% G = ±2% J = ±5% K = ±10%	<b>C</b> = COG/NPO	<b>T</b> = 178mm (7") reel <b>R</b> = 330mm (13") reel <b>B</b> = Bulk pack - tubs	LCD Inverter range

The Syfer E01 and E07 ranges of feedthrough MLCC chip 'C' filters are 3 terminal chip devices designed to offer reduced inductance compared to conventional MLCC's when used in signal line filtering.

The filtered signal passes through the chip internal electrodes and the noise is filtered to the grounded side contacts, resulting in reduced length noise transmission paths.

Available in COG/NPO and X7R dielectrics, with current ratings of 300mA, 1A, 2A and voltage ratings of 25Vdc to 200Vdc. Also available with FlexiCap™ termination which is strongly recommended for new designs.

Commonly used in automotive applications, a range qualified to AECQ-200 is also available.

**E01** 300mA, **E07** 1A/2A

### X2Y

The Syfer X2Y Integrated Passive Component is a 3 terminal EMI chip device.

When used in balanced line applications, the revolutionary design provides simultaneous line-to-line and line-to-ground filtering, using a single ceramic chip. In this way, differential and common mode filtering are provided in one device.

For unbalanced applications, it provides ultra low ESL (equivalent series inductance). Capable of replacing 2 or more conventional devices, it is ideal for balanced and unbalanced lines, twisted pairs and dc motors, in automotive, audio, sensor and other applications.

Available in sizes from 0603 to 2220, these filters can prove invaluable in meeting stringent EMC demands.

Manufactured in the UK by Syfer Technology Limited under licence from X2Y attenuators LLC.

**Dielectric**  
X7R or COG/NPO

**Electrical configuration**  
Multiple capacitance

**Capacitance measurement**  
At 1000hr point

**Typical capacitance matching**  
Better than 5%

**Temperature rating**  
-55°C to 125°C

**Insulation resistance**  
100Gohms or 1000s (whichever is the less)

**Dielectric withstand voltage**  
≤200V 2.5 times rated Volts for 5 secs  
500V 1.5 times rated Volts for 5 secs  
Charging current limited to 50mA Max.

G	Reel inside width	8.4 (0.33)	12.4 (0.49)
T	Reel outside width	14.4 (0.56) max	18.4 (0.72) max

**Missing components**

The number of missing components in the tape may not exceed 0.25% of the total quantity with not more than three consecutive components missing. This must be followed by at least six properly placed components.

**Identification**

Each reel is labelled with the following information: manufacturer, chip size, capacitance, tolerance, rated voltage, dielectric type, batch number, date code and quantity of components.

**Leader and Trailer**

**Component orientation**

Tape and reeling is in accordance with IEC 60286 part 3, which defines the packaging specifications of leadless components on continuous tapes.

- NOTES: 1) IEC60286 states  $A_0 \leq B_0$  (see Tape Dimensions above).  
2) Regarding the orientation of 1825 & 2225 components, the termination bands are right to left, NOT front to back. Please see diagram.

Orientation of 1825 & 2225 components

**Outer Packaging**

**Outer Carton Dimensions mm (inches) max.**

Note: The highlighted parts are defined as 'dual-use' under export control legislation and as such are subject to export licence restrictions. Please refer to page 9 for further details.

**Cropped leads**

Cropped leads between 4.0 (0.157) and 30.0 (1.18) are available to special order. Some of the preferred codes are listed below, together with the appropriate suffix code. Dimensions as for standard product except as specified.

<b>Suffix code - AE3</b> All radial ranges	<b>Suffix code - AE4</b> All radial ranges	<b>Suffix code - AD7</b> All radial ranges	<b>Suffix code - AD5</b> All radial ranges
<b>Lead length (L)</b> 6 ± 1 (0.236 ± 0.04) from seating plane	<b>Lead length (L)</b> 4 ± 1 (0.162 ± 0.04) from seating plane	<b>Lead length (L)</b> 5 ± 1 (0.2 ± 0.04) from seating plane	<b>Lead length (L)</b> 10 ± 1 (0.4 ± 0.04) from seating plane

**Snap in leads**

Various forms of snap in leads (preformed) are available to special order, some of the preferred suffix codes are listed below. Dimensions as for standard product except as specified.

**Suffix code - AD1**

For PCB holes 0.9mm diameter  
Types 8121N and 8131M

Dimensions  
Y = 8121N 8 (0.315) Max  
8131M 10 (0.394) Max  
L = Min: 2.75 (0.108)  
Max: 3.50 (0.138)

**Suffix code - AD2**

For PCB holes 1.2mm diameter  
Types 8131M

Dimensions  
Y = 10 (0.294) Max  
L = Min: 2.75 (0.108)  
Max: 3.50 (0.138)

**Suffix code - AD3**

For PCB holes 1.2mm diameter  
Types 8121N

Dimensions  
Y = 8 (0.315) Max  
L = Min: 2.75 (0.108)  
Max: 3.50 (0.138)

Dimensions mm (inches)

**Bandoliered suffix codes**

Dipped radial leaded with 2.54 and 5.08mm lead spacing can be supplied bandoliered on reels or in ammo boxes to special order. Some of the preferred suffix codes for bandoliered products are given below.

For bandoliered products the minimum order quantity, pieces, is specified in the tables below, larger orders must be in multiples of this quantity.

**Dipped – straight and formed leads**

Product code	Lead style	Diagram	H	H <sub>0</sub>	Suffix code		
					Reel	AMMO pack	
8111M	Straight 2.54 crs	A	19±1	-	2500pcs C01	1000pcs C02	2000pcs C11
8111M	Straight 2.54 crs	A	16±0.5	-	C30	C31	C32
8111N	Formed 5.08 crs	B	-	16±0.5	C01	C02	C11
8121M	Straight 2.54 crs	A	19±1	-	C01	C02	C11
8121M	Straight 2.54 crs	A	16±0.5	-	C30	C31	C32
8121N	Formed 5.08 crs	B	-	16±0.5	C01	C02	C11
8131M	Straight 5.08 crs	A	19±1	-	C01	C02	C11
8131M	Straight 5.08 crs	A	16±0.5	-	C30	C31	C32

8121T and 8131T available in bulk packaging only.

**Dipped – stand-off lead form**

This style has been developed to provide a meniscus-free seating plane with a stress relieving form for auto-insertion.

Product code	Lead style	Y max	H <sub>0</sub>	2500pcs	1000pcs	2000pcs
8111N	Formed 5.08 crs	7.5	16±0.5	C12	C23	C22
8111N	Formed 5.08 crs	7.5	19±1	C13	C25	C24
8121N	Formed 5.08 crs	8.5	16±0.5	C12	C23	C22
8121N	Formed 5.08 crs	8.5	19±1	C13	C25	C24

A maximum of 3 consecutive components may be missing from the bandolier, followed by at least 6 filled positions. Components missing from the bandolier are included in the total quantity, whereby the number of missing components may not exceed 0.25% of this total per packing module. At the beginning and end of a reel the bandolier will exhibit at least 10 blank positions.

Minimum pull strength of product from tape = 5N.

Each reel/carton is provided with a label showing the: Manufacturer, product style, batch identification, quantity and date code.

Labelling with bar codes (code 39) is available on request.

In accordance with IEC 60286 part 2.

**Dimensions mm (inches)**

Description	Symbol	2.5mm lead space	5mm lead space	Tolerance
Lead wire diameter	d	0.5 (0.02) 0.6 (0.025)	0.5 (0.02) 0.6 (0.025)	±0.05 (0.002)
Component pitch	P	12.7 (0.5)	12.7 (0.5)	1.00 (0.04)
Feed hole pitch	P <sub>0</sub>	12.7 (0.5)	12.7 (0.5)	±0.30 (0.01)
Feed hole centre to lead	P <sub>1</sub>	5.08 (0.2)	3.81 (0.15)	±0.70 (0.03)
Feed hole centre to component	P <sub>2</sub>	6.35 (0.25)	6.35 (0.25)	±0.70 (0.03)
Lead spacing	F	2.54 (0.10)	5.08 (0.20)	+0.6 (0.02) -0.1 (0.004)
Component alignment	Δh	0	0	±2.00(0.08)
Tape width	W	18.0 (0.70)	18.0 (0.70)	+1.00 (0.04) -0.50 (0.02)
Hold down tape width	W <sub>0</sub>	6.0 (0.23)	6.0 (0.23)	±0.30 (0.01)
Hole position	W <sub>1</sub>	9.0 (0.35)	9.0 (0.35)	±0.50 (0.02)
Hold down tape position	W <sub>2</sub>	0.50 (0.02)	0.50 (0.02)	Max
Height to seating plane from tape centre (straight leads) (2)	H	16 (0.63) to 20 (0.79)	16 (0.63) to 20 (0.79)	As required
Height to seating plane from tape centre (formed leads) (2)	H <sub>0</sub>	16 (0.63) to 20 (0.79)	16 (0.63) to 20 (0.79)	As required
Height to top of component from tape centre	H <sub>1</sub>	32.2 (1.26)	32.2 (1.26)	Max
Feed hole diameter	D <sub>0</sub>	4.0 (0.16)	4.0 (0.16)	±0.20 (0.008)
Carrier tape plus adhesive tape thickness	t	0.7 (0.03)	0.7 (0.03)	±0.20 (0.008)
Carrier tape thickness	-	0.5 (0.02)	0.5 (0.02)	±0.10 (0.004)
Cut out component snipped lead length from tape centre	L	11.0 (0.43)	11.0 (0.43)	Max
Lead wire protrusion from hold down	L <sub>2</sub>	2.0 (0.08)	2.0 (0.08)	Max

**Bandoliered reels**

**Bandoliered ammo packing**

2 carton sizes

The adhesive tape faces outwards. The dispensing direction is as shown. For the protection of the components a paper inlay is inserted between the windings of the bandolier. At the end of the bandolier this paper inlay continues for at least a further two rotations.

Ceramic & Microwave Products (CMP) designs, manufactures and sells special electronic components and systems, including high-performance filters, switches, capacitors and EMI and cosite signal interference solutions. Our products are used in military, space, telecom infrastructure, medical and industrial applications where function and reliability are crucial.
