RENESAS MCU  
RX Family / RX200 Series

All information contained in these materials, including products and product specifications, represents information on the product at the time of publication and is subject to change by Renesas Electronics Corporation without notice. Please review the latest information published by Renesas Electronics Corporation through various means, including the Renesas Electronics Corporation website (<http://www.renesas.com>).

## Notice

1. Descriptions of circuits, software and other related information in this document are provided only to illustrate the operation of semiconductor products and application examples. You are fully responsible for the incorporation of these circuits, software, and information in the design of your equipment. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from the use of these circuits, software, or information.
2. Renesas Electronics has used reasonable care in preparing the information included in this document, but Renesas Electronics does not warrant that such information is error free. Renesas Electronics assumes no liability whatsoever for any damages incurred by you resulting from errors in or omissions from the information included herein.
3. Renesas Electronics does not assume any liability for infringement of patents, copyrights, or other intellectual property rights of third parties by or arising from the use of Renesas Electronics products or technical information described in this document. No license, express, implied or otherwise, is granted hereby under any patents, copyrights or other intellectual property rights of Renesas Electronics or others.
4. You should not alter, modify, copy, or otherwise misappropriate any Renesas Electronics product, whether in whole or in part. Renesas Electronics assumes no responsibility for any losses incurred by you or third parties arising from such alteration, modification, copy or otherwise misappropriation of Renesas Electronics product.
5. Renesas Electronics products are classified according to the following two quality grades: "Standard" and "High Quality". The recommended applications for each Renesas Electronics product depends on the product's quality grade, as indicated below.

"Standard": Computers; office equipment; communications equipment; test and measurement equipment; audio and visual equipment; home electronic appliances; machine tools; personal electronic equipment; and industrial robots etc.

"High Quality": Transportation equipment (automobiles, trains, ships, etc.); traffic control systems; anti-disaster systems; anticrime systems; and safety equipment etc.

Renesas Electronics products are neither intended nor authorized for use in products or systems that may pose a direct threat to human life or bodily injury (artificial life support devices or systems, surgical implantations etc.), or may cause serious property damages (nuclear reactor control systems, military equipment etc.). You must check the quality grade of each Renesas Electronics product before using it in a particular application. You may not use any Renesas Electronics product for any application for which it is not intended. Renesas Electronics shall not be in any way liable for any damages or losses incurred by you or third parties arising from the use of any Renesas Electronics product for which the product is not intended by Renesas Electronics.

6. You should use the Renesas Electronics products described in this document within the range specified by Renesas Electronics, especially with respect to the maximum rating, operating supply voltage range, movement power voltage range, heat radiation characteristics, installation and other product characteristics. Renesas Electronics shall have no liability for malfunctions or damages arising out of the use of Renesas Electronics products beyond such specified ranges.
7. Although Renesas Electronics endeavors to improve the quality and reliability of its products, semiconductor products have specific characteristics such as the occurrence of failure at a certain rate and malfunctions under certain use conditions. Further, Renesas Electronics products are not subject to radiation resistance design. Please be sure to implement safety measures to guard them against the possibility of physical injury, and injury or damage caused by fire in the event of the failure of a Renesas Electronics product, such as safety design for hardware and software including but not limited to redundancy, fire control and malfunction prevention, appropriate treatment for aging degradation or any other appropriate measures. Because the evaluation of microcomputer software alone is very difficult, please evaluate the safety of the final products or systems manufactured by you.
8. Please contact a Renesas Electronics sales office for details as to environmental matters such as the environmental compatibility of each Renesas Electronics product. Please use Renesas Electronics products in compliance with all applicable laws and regulations that regulate the inclusion or use of controlled substances, including without limitation, the EU RoHS Directive. Renesas Electronics assumes no liability for damages or losses occurring as a result of your noncompliance with applicable laws and regulations.
9. Renesas Electronics products and technology may not be used for or incorporated into any products or systems whose manufacture, use, or sale is prohibited under any applicable domestic or foreign laws or regulations. You should not use Renesas Electronics products or technology described in this document for any purpose relating to military applications or use by the military, including but not limited to the development of weapons of mass destruction. When exporting the Renesas Electronics products or technology described in this document, you should comply with the applicable export control laws and regulations and follow the procedures required by such laws and regulations.
10. It is the responsibility of the buyer or distributor of Renesas Electronics products, who distributes, disposes of, or otherwise places the product with a third party, to notify such third party in advance of the contents and conditions set forth in this document, Renesas Electronics assumes no responsibility for any losses incurred by you or third parties as a result of unauthorized use of Renesas Electronics products.
11. This document may not be reproduced or duplicated in any form, in whole or in part, without prior written consent of Renesas Electronics.
12. Please contact a Renesas Electronics sales office if you have any questions regarding the information contained in this document or Renesas Electronics products, or if you have any other inquiries.

(Note 1) "Renesas Electronics" as used in this document means Renesas Electronics Corporation and also includes its majority owned subsidiaries.

(Note 2) "Renesas Electronics product(s)" means any product developed or manufactured by or for Renesas Electronics.

**CAUTION**

With reference to Directive 2014/30/EU Article 2, clause 2 (e) this is a custom built evaluation kit destined for professionals to be used solely at research and development facilities for such purposes. This equipment can cause radio frequency noise when used. In such cases, the user/operator of the equipment may be required to take appropriate countermeasures under his responsibility.

**CAUTION**

This equipment should be handled like a CMOS semiconductor device. The user must take all precautions to avoid build-up of static electricity while working with this equipment. All test and measurement tool including the workbench must be grounded. The user/operator must be grounded using the wrist strap. The connectors and/or device pins should not be touched with bare hands.

EEDT-ST-004-10

**For customers in the European Union only**

The WEEE (Waste Electrical and Electronic Equipment) regulations put responsibilities on producers for the collection and recycling or disposal of electrical and electronic waste. Return of WEEE under these regulations is applicable in the European Union only. This equipment (including all accessories) is not intended for household use. After use the equipment cannot be disposed of as household waste, and the WEEE must be treated, recycled and disposed of in an environmentally sound manner. Renesas Electronics Europe GmbH can take back end of life equipment, register for this service at <http://www.renesas.eu/weee>

## Disclaimer

By using this Renesas Starter Kit (RSK), the user accepts the following terms:

The RSK is not guaranteed to be error free, and the entire risk as to the results and performance of the RSK is assumed by the User. The RSK is provided by Renesas on an "as is" basis without warranty of any kind whether express or implied, including but not limited to the implied warranties of satisfactory quality, fitness for a particular purpose, title and non-infringement of intellectual property rights with regard to the RSK. Renesas expressly disclaims all such warranties. Renesas or its affiliates shall in no event be liable for any loss of profit, loss of data, loss of contract, loss of business, damage to reputation or goodwill, any economic loss, any reprogramming or recall costs (whether the foregoing losses are direct or indirect) nor shall Renesas or its affiliates be liable for any other direct or indirect special, incidental or consequential damages arising out of or in relation to the use of this RSK, even if Renesas or its affiliates have been advised of the possibility of such damages.

## Precautions

The following precautions should be observed when operating any RSK product:

This Renesas Starter Kit is only intended for use in a laboratory environment under ambient temperature and humidity conditions. A safe separation distance should be used between this and any sensitive equipment. Its use outside the laboratory, classroom, study area or similar such area invalidates conformity with the protection requirements of the Electromagnetic Compatibility Directive and could lead to prosecution.

The product generates, uses, and can radiate radio frequency energy and may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment causes harmful interference to radio or television reception, which can be determined by turning the equipment off or on, you are encouraged to try to correct the interference by one or more of the following measures;

- ensure attached cables do not lie across the equipment
- reorient the receiving antenna
- increase the distance between the equipment and the receiver
- connect the equipment into an outlet on a circuit different from that which the receiver is connected
- power down the equipment when not in use
- consult the dealer or an experienced radio/TV technician for help NOTE: It is recommended that wherever possible shielded interface cables are used.

The product is potentially susceptible to certain EMC phenomena. To mitigate against them it is recommended that the following measures be undertaken;

- The user is advised that mobile phones should not be used within 10m of the product when in use.
- The user is advised to take ESD precautions when handling the equipment.

The Renesas Starter Kit does not represent an ideal reference design for an end product and does not fulfil the regulatory standards for an end product.

# How to Use This Manual

## 1. Purpose and Target Readers

This manual is designed to provide the user with an understanding of the RSK hardware functionality, and electrical characteristics. It is intended for users designing sample code on the RSK platform, using the many different incorporated peripheral devices.

The manual comprises of an overview of the capabilities of the RSK product, but does not intend to be a guide to embedded programming or hardware design. Further details regarding setting up the RSK and development environment can found in the tutorial manual.

Particular attention should be paid to the precautionary notes when using the manual. These notes occur within the body of the text, at the end of each section, and in the Usage Notes section.

The revision history summarizes the locations of revisions and additions. It does not list all revisions. Refer to the text of the manual for details.

The following documents apply to the RSKRX23T. Make sure to refer to the latest versions of these documents. The newest versions of the documents listed may be obtained from the Renesas Electronics Web site.

## 1. Overview

### 1.1 Purpose

This RSK is an evaluation tool for Renesas microcontrollers. This manual describes the technical details of the RSK hardware. The Quick Start Guide and Tutorial Manual provide details of the software installation and debugging environment.

### 1.2 Features

This RSK provides an evaluation of the following features:

- Renesas microcontroller programming
- User code debugging
- User circuitry such as switches, LEDs and a potentiometer
- Sample application
- Sample peripheral device initialisation code

The RSK board contains all the circuitry required for microcontroller operation.

### 1.3 Board specification

Board specification was shown in **Table 1-1** below.

Item	Specification
Microcontroller	Part No : R5F523T5ADFM
	Package : 64-pin LQFP
	On-Chip Memory : ROM 128KB, RAM 12KB
On-Board Memory	I2C EEPROM : 2Kbit
Input Clock	RX23T Main : 20MHz
	RL78/G1C Main: 12MHz
Power Supply* <sup>1</sup>	DC Power Jack : 5 V Input
	Power Supply IC : 5V Input, 3.3V Output
Debug Interface	E1 14-pin box header
Push Switch	Reset Switch x 1
	User Switch x 3
Potentiometer (for ADC)	Single-turn, 10kΩ
LED	Power indicator: green x 1
	User : green x 1, orange x 1, red x 2
USB to Serial Converter Interface	Connector : USB-MiniB
	Driver : RL78/G1C Microcontroller (Part No R5F10JBCANA)
Pmod™	PMOD1 : Angle type, 12-pin Connector
	PMOD2* <sup>2</sup> : Straight type, 12-pin Connector
Application Board Interface * <sup>2</sup>	2.54mm pitch, 26-pin x 2 (JA1, JA2), 24-pin x 2 (JA5, JA6)

**Table 1-1: Board Specification**

\*<sup>1</sup>: Board can also supply 5V into RX23T microcontroller without LDO regulator.

\*<sup>2</sup>: The Application Board Interface connectors are not fitted on this product.

## 2. Power Supply

### 2.1 Requirements

This RSK is supplied with an E1 debugger. The debugger is able to power the RSK board with up to 200mA. When the RSK is connected to another system then that system should supply power to the RSK. This board has an optional centre positive supply connector using a 2.0mm barrel power jack.

Details of the external power supply requirements for the RSK, and configuration are shown in **Table 2-2** below. The default RSK power configuration is shown in **bold, blue text**.

Connector	Supply voltage
PWR	Input 5VDC

**Table 2-1: PWR Connector Requirements**

J6 Setting(DNF)	R139 Setting	Supply Source	Board_VCC UC_VCC	Unavailable Feature
Pin1-2 shorted	DNF	PWR/Unregulated_VCC/CON_5V	3V3	None
		E1(3V3)/CON_3V3	3V3	None
<b>All open</b>	<b>Fit</b>	PWR/Unregulated_VCC/CON_5V	3V3	None
		<b>E1(3V3)/CON3V3</b>	<b>3V3</b>	<b>None</b>
Pin2-3 shorted	DNF	PWR/Unregulated_VCC/CON_5V	5V	Pmod
		E1(5V)	5V	Pmod

**Table 2-2: Main Power Supply Requirements**

The main power supply connected to PWR should supply a minimum of 5W to ensure full functionality.
--

### 2.2 Power-Up Behaviour

When the RSK is purchased, the RSK board has the 'Release' build of the example tutorial software pre-programmed into the Renesas microcontroller. Please consult the 'Renesas Starter Kit Code Generator Tutorial Manual' for further information of this example.

### 3. Board Layout

#### 3.1 Component Layout

Figure 3-1 below shows the top component layout of the board.

Figure 3-1: Board Layout

### 3.2 Board Dimensions

Figure 3-2 below gives the board dimensions and connector positions. All the through-hole connectors are on a common 0.1 inch grid for easy interfacing.

Figure 3-2: Board Dimensions

### 3.3 Component Placement

Figure 3-3 below shows placement of individual components on the top-side PCB – bottom-side component placement can be seen in Figure 3-4. Component types and values are shown on the board schematics.

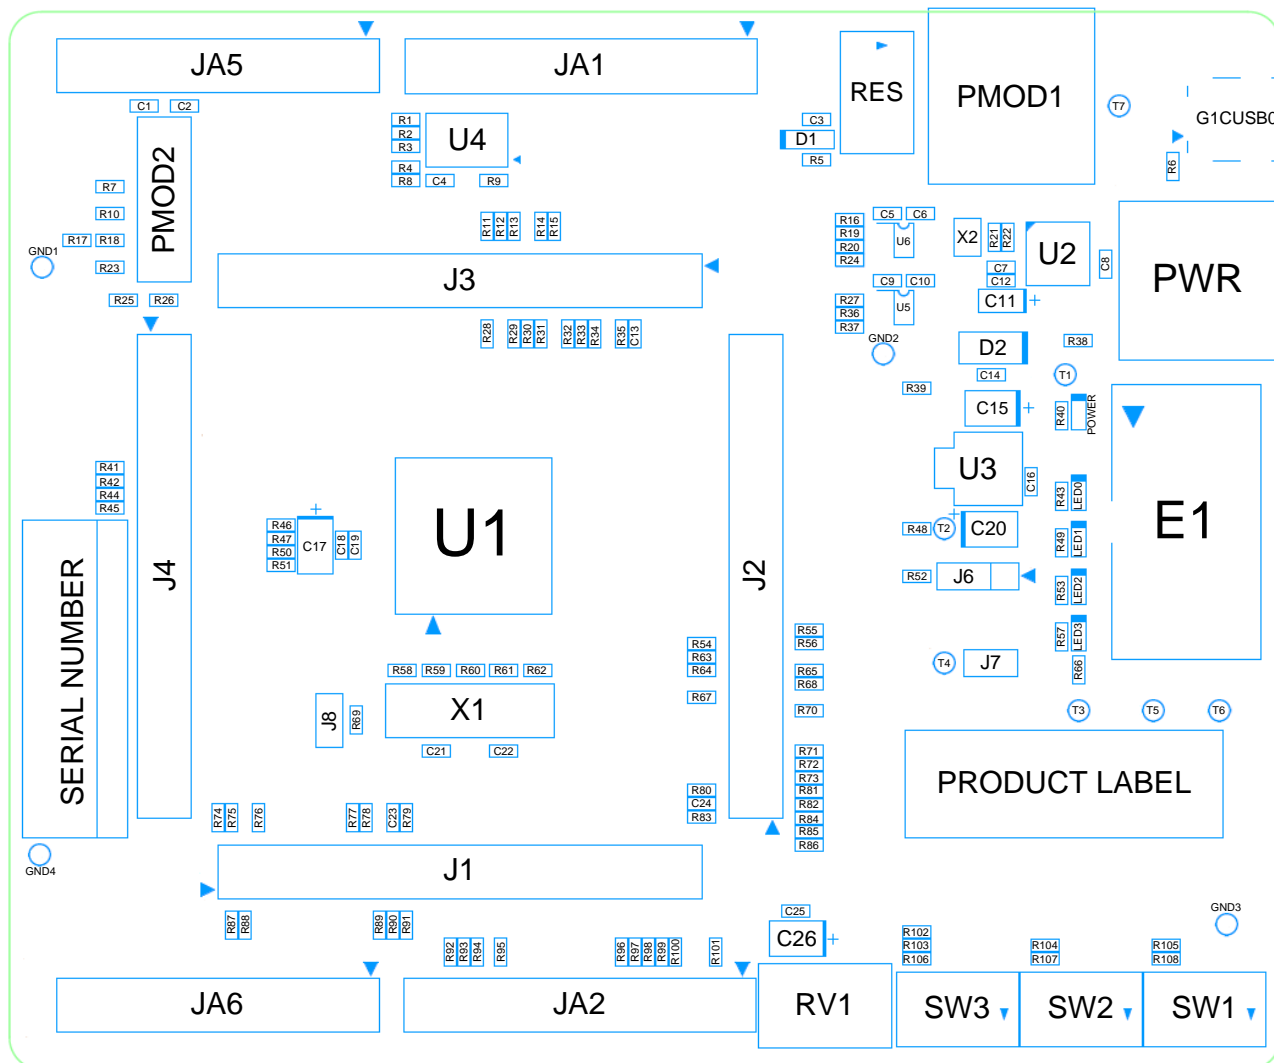

Figure 3-3 Top-Side Component Placement

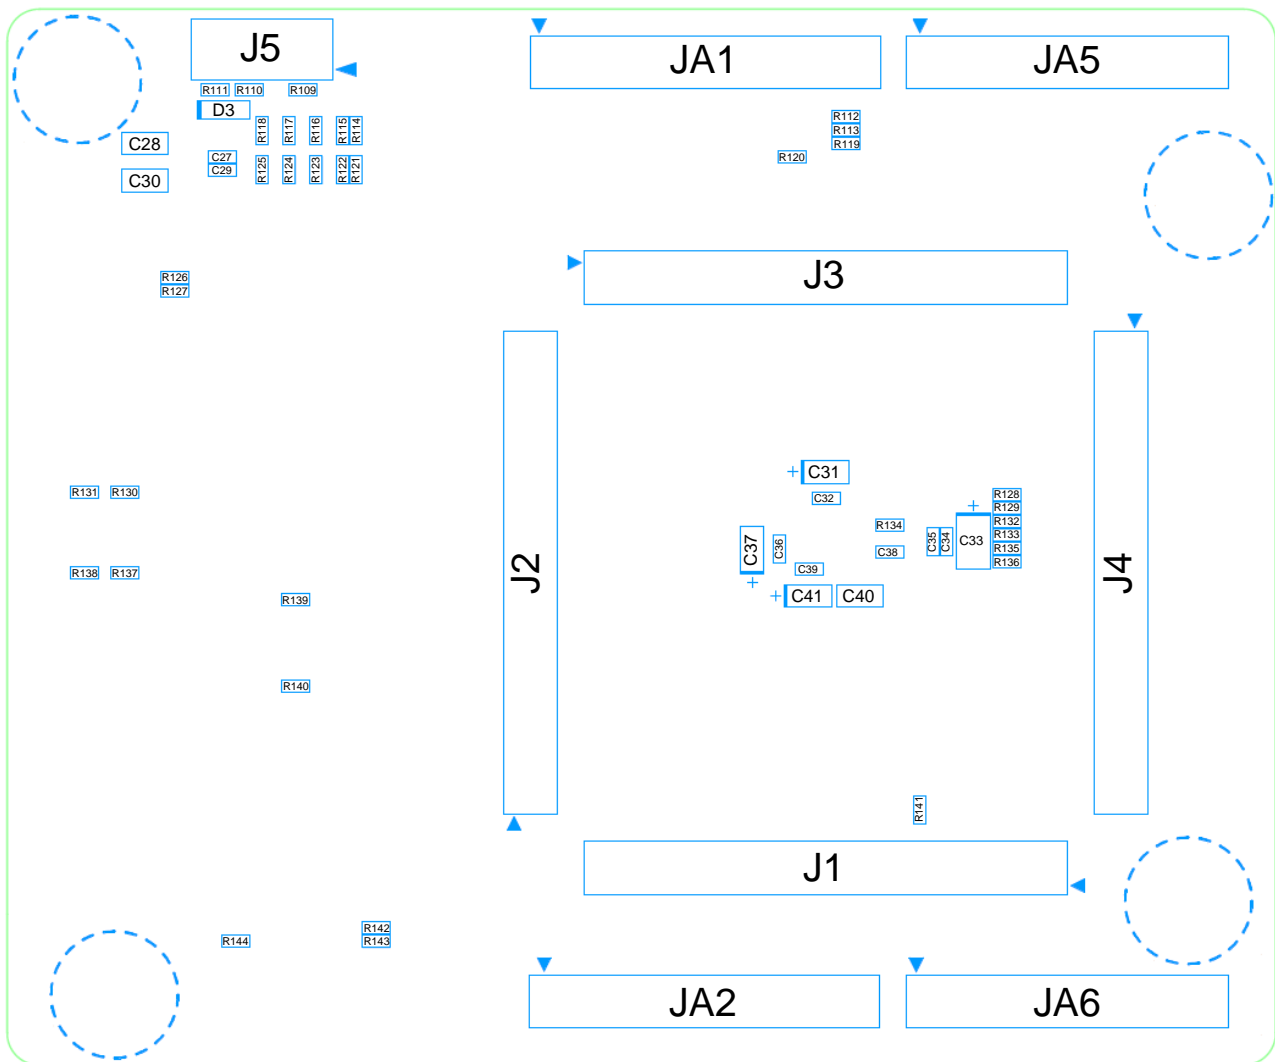

Figure 3-4 Bottom-Side Component Placement

## 4. Connectivity

### 4.1 Internal RSK Connections

The diagram below shows the RSK board components and their connectivity to the MCU.

\*1: This connection is not available in the default RSK configuration - refer to §6 for the required modifications.

**Figure 4-1: Internal RSK Block Diagram**

### 4.2 Debugger Connections

The diagram below shows the connections between the RSK, E1 debugger and the host PC.

Figure 4-2: Debugger Connection Diagram

## 5. User Circuitry

### 5.1 Reset Circuit

A reset control circuit is fitted to the RSK to generate a reset signal from the RES switch. Refer to the RX23T hardware manual for details regarding the reset signal timing requirements, and the RSK schematics for information regarding the reset circuitry in use on the board.

### 5.2 Clock Circuit

A clock circuit is fitted to the RSK to generate the required clock signal to drive the MCU, and associated peripherals. Refer to the RX23T Group Hardware Manual for details regarding the clock signal requirements, and the RSKRX23T board schematics for information regarding the clock circuitry in use on the RSK. Details of the oscillators fitted to the board are listed in **Table 5-1** below.

Crystal	Function	Default Placement	Frequency	Device Package
X1	RX23T Main oscillator.	Fitted	20MHz	Encapsulated, SMT
X2	RL78/G1C Main oscillator	Fitted	12MHz	Encapsulated, SMT

**Table 5-1: Oscillators**

### 5.3 Switches

There are four switches located on the RSK board. The function of each switch and its connection is shown in **Table 5-2**. For further information regarding switch connectivity, refer to the RSK schematics.

Switch	Function	MCU	
		Signal (Port)	Pin
RES	When pressed, the microcontroller is reset	RES#	6
SW1	Connects to an IRQ input for user controls	IRQ5 (PD6)	13
SW2	Connects to an IRQ input for user controls.	IRQ2 (P00)	2
SW3	Connects to an IRQ input for user controls. <sup>*1</sup>	IRQ1 (P94)	29
	Connects to an ADTRG input.	ADTRG0# (PA4)	64

**Table 5-2: Switch Connections**

<sup>\*1</sup>: This connection is a not available in the default RSK configuration - refer to §6 for the required modifications.

## 5.4 LEDs

There are five LEDs on the RSK. The function of each LED, its colour, and its connections are shown in **Table 5-3**.

LED	Colour	Function	MCU	
			Port	Pin
POWER	Green	Indicates the status of the Board_VCC power rail	-	-
LED0	Green	User operated LED	PA3	27
LED1	Orange	User operated LED	P71	38
LED2	Red	User operated LED	P72	37
LED3	Red	User operated LED	P73	36

**Table 5-3: LED Connections**

## 5.5 Potentiometer

A single-turn potentiometer is connected as a potential divider to analog input AN000 (Port P40, Pin 56). The potentiometer can be used to create a voltage between Board\_VCC and ground. Refer to the maker site for specification of the potentiometer (PIHER with part number N6 series).

The potentiometer offers an easy method of supplying a variable analog input to the microcontroller. It does not necessarily reflect the accuracy of the controller's ADC. Refer to the RX23T Group Hardware Manual for further details.

## 5.6 Pmod™

The RSK board are equipped with connectors for Digilent Pmod™ interface. Please connect the PMOD1 connector that is compatible with Debug LCD.

Care should be taken when installing the LCD module to ensure pins are not bent or damaged. The LCD module is vulnerable to electrostatic discharge (ESD); therefore appropriate ESD protection should be used.

The Digilent Pmod™ Compatible headers uses an SPI interface. **Figure 5-1** below shows Digilent Pmod™ Compatible Header Pin Numbering. Connection information for the Digilent Pmod™ Compatible header is provided in **Table 5-4** and **Table 5-5** below.

Please note that the connector numbering adheres to the Digilent Pmod™ standard and is different from all other connectors on the RSK designs. Details can be found in the Digilent Pmod™ Interface Specification Revision: November 20, 2011.

**Figure 5-1: Digilent Pmod™ Compatible Header Pin Numbering**

Digilent Pmod™ Compatible Header (PMOD1) Connections							
Pin	Signal Name	MCU		Pin	Signal Name	MCU	
		Port	Pin			Port	Pin
1	PMOD1_PIN1	PA2/P02	28/1	7	IRQ0	P93	30
2	P-TXD5	PB5	19	8	IRQ4	P01	4
3	P-RXD5	PB6	18	9	P91	P91	32
4	P-SCK5	PB7	17	10	P92	P92	31
5	GROUND	-	-	11	GROUND	-	-
6	Board_3V3	-	-	12	Board_3V3	-	-

**Table 5-4: Pmod™1 Header Connections**

Digilent Pmod™ Compatible Header (PMOD2) Connections							
Pin	Signal Name	MCU		Pin	Signal Name	MCU	
		Port	Pin			Port	Pin
1	PD7	PD7	12	7	P-IRQ2	P00	2
2	P-TXD5	PB5	19	8	P-IRQ3	PB4	21
3	P-RXD5	PB6	18	9	P30	P30	45
4	P-SCK5	PB7	17	10	P31	P31	43
5	GROUND	-	-	11	GROUND	-	-
6	Board_3V3	-	-	12	Board_3V3	-	-

**Table 5-5: Pmod™2 Header Connections**

## 5.7 USB Serial Port

A USB serial port is implemented in a Renesas low power microcontroller (RL78/G1C) and is connected to the RX23T Serial Communications Interface (SCI) module. Multiple options are provided to allow the selection of the connected SCI1 port. Connections between the USB to Serial converter and the microcontroller are listed in **Table 5-6** below.

Signal Name	Function	MCU	
		Port	Pin
TXD1	SCI1 Transmit Signal	PD3	16
RXD1	SCI1 Receive Signal	PD5	14

**Table 5-6: Serial Port Connections**

\*<sup>1</sup>: This connection is not available in the default RSK configuration - refer to §6 for the required modifications.

When the RSK board is first connected to a PC running Windows with the USB/Serial connection, the PC will look for a driver. This driver is installed during the installation process, so the PC should be able to find it. The PC will report that it is installing for a driver and then report that a driver has been installed successfully, as shown in **Figure 5-2**. The exact messages may vary depending upon operating system.

**Figure 5-2: USB-Serial Windows Installation message**

## 5.8 I<sup>2</sup>C Bus (Inter-IC Bus)

The RX23T features one I<sup>2</sup>C (Inter-IC Bus) interface modules. RIIC0 is connected to a 2Kbit EEPROM. Specific details of the EEPROM device and the connections can be found in the board schematics.

## 6. Configuration

### 6.1 Modifying the RSK

This section lists the option links that are used to modify the way RSK operates in order to access different configurations. Configurations are made by modifying link resistors or headers with movable jumpers or by configuration DIP switches

A link resistor is a 0Ω surface mount resistor, which is used to connect or isolate parts of a circuit. Option links are listed in the following sections, detailing their function when fitted or removed. **Bold, blue text** indicates the default configuration that the RSK is supplied with. Refer to the component placement diagram (§3) to locate the option links, jumpers and DIP switches.

When removing soldered components, always ensure that the RSK is not exposed to a soldering iron for intervals greater than 5 seconds. This is to avoid damage to nearby components mounted on the board.

When modifying a link resistor, always check the related option links to ensure there is no possible signal contention or short circuits. Because many of the MCU's pins are multiplexed, some of the peripherals must be used exclusively. Refer to the RX23T Group Hardware Manual and RSKRX23T schematics for further information.

### 6.2 MCU Operating Modes

**Table 6-1** below details the option links associated with configuring the MCU operating modes.

Reference	Link Fitted Configuration	Link Removed Configuration	Related Ref.
J8	Boot Mode (SCI)	<b>Single Chip Mode</b>	-

**Table 6-1: MCU Option Links**

### 6.3 Power Supply Configuration

**Table 6-2** and **Table 6-3** below details the function of the option links associated with power supply configuration.

Reference	Jumper Position	Explanation	Related Ref.
J6 *1	Shorted Pin1-2	Connect Power rail via regulator.	R139*1
	Shorted Pin2-3	Direct connect Power rail.	R139*1
	All open	<b>In case of fitted R139*1, same as "Jumper J6 shorted Pin1-2".</b>	R139*1
J7 *2	Shorted	<b>Connect Power rail.</b>	R140
	Open	Enable current probe for MCU current consumption.	R140

**Table 6-2: Power Supply Option Links (1)**

\*1: By default, jumper J6 is not fitted to the RSK. R139 is fitted by default and becomes the same setting as 'Connect Power rail via regulator'.

\*2: By default, jumper J7 is not fitted to the RSK. R140 is fitted by default and becomes the same setting as 'Connect Power rail'.

Items shown in **bold** are the Fit / Do Not Fit (DNF) default configuration that the RSK is supplied with.

## 7. Headers

### 7.1 Application Headers

This RSK is fitted with application headers, which can be used to connect compatible Renesas application devices or as easy access to MCU pins.

**Table 7-1** below lists the connections of the application header, JA1.

Application Header JA1					
Pin	Header Name	MCU Pin	Pin	Header Name	MCU Pin
	Circuit Net Name			Circuit Net Name	
1	5V	-	2	0V	-
	CON_5V			GROUND	
3	3V3	-	4	0V	-
	CON_3V3			GROUND	
5	AVCC	57	6	AVSS	60/59
	CON_AVCC0			CON_AVSS0/CON_VREFL0

## 7.2 Microcontroller Pin Headers

This RSK is fitted with MCU pin headers, which are used to access all the MCU's pins.

**Table 7-5** below lists the connections of the microcontroller pin header, J1.

Microcontroller Pin Header J1					
Pin	Circuit Net Name	MCU Pin	Pin	Circuit Net Name	MCU Pin
1	P02	1	2	A-IRQ2_P-IRQ2	2
3	NC	NC	4	IRQ4	4
5	MD_FINED	5	6	RESn	6
7	CON_XTAL	7	8	GROUND	-

## 8. Code Development

### 8.1 Overview

For all code debugging using Renesas software tools, the RSK board must be connected to a PC via an E1/E20 debugger. An E1 debugger is supplied with this RSK product.

For further information regarding the debugging capabilities of the E1/E20 debuggers, refer to E1/E20 Emulator Additional Document for User's Manual (R20UT0399EJ).

### 8.2 Compiler Restrictions

The compiler supplied with this RSK is fully functional for a period of 60 days from first use. After the first 60 days of use have expired, the compiler will default to a maximum of 128k code and data. To use the compiler with programs greater than this size you need to purchase the full tools from your distributor.

The protection software for the compiler will detect changes to the system clock. Changes to the system clock back in time may cause the trial period to expire prematurely.

### 8.3 Mode Support

The MCU supports Single Chip and Boot modes (SCI), which are configured on the RSK board. Details of the modifications required can be found in §6.2. All other MCU operating modes are configured within the MCU's registers, which are listed in the RX23T group hardware manual.

Only change the MCU operating mode whilst the RSK is in reset, or turned off; otherwise the MCU may become damaged as a result.

### 8.4 Debugging Support

The E1 emulator (as supplied with this RSK) supports break points, event points (including mid-execution insertion) and basic trace functionality. It is limited to a maximum of 8 on-chip event points, 256 software breaks and 256 branch/cycle trace. For further details, refer RX Family E1/E20 Emulator User's Manual (R20UT0398EJ).

### 8.5 Address Space

For the MCU address space details, refer to the 'Address Space' section of RX23T Group Hardware Manual.

## 9. Additional Information

### Technical Support

For information about the RX23T Group microcontrollers refer to the RX23T Group Hardware Manual.

For information about the RX assembly language, refer to the RX Family Software Manual.

### Technical Contact Details

*Please refer to the contact details listed in section 8 of the “Quick Start Guide”*

General information on Renesas Microcontrollers can be found on the Renesas website at:

<http://www.renesas.com/>

### Trademarks

All brand or product names used in this manual are trademarks or registered trademarks of their respective companies or organisations.
