KA317HV

3-Terminal Positive Adjustable Regulator

Features

- Output Current In Excess of 1. 5A
- Output Adjustable Between 1. 2V and 57V
- Internal Thermal Overload Protection
- Internal Short Circuit Current Limiting
- Output Transistor Safe Area Compensation
- TO-220 Package

Description

This monolithic integrated circuit is an adjustable 3-terminal positive voltage regulator designed to supply more than 1.5A of load current with an output voltage adjustable over a 1.2 to 57V. It employs internal current limiting, thermal shut down and safe area compensation.

Note :

1. Load and line regulation are specified at constant junction temperature. Change in V_D due to heating effects must be taken into account separately. Pulse testing with low duty is used. (P_{MAX} = 20W)
2. C_{ADJ}, when used, is connected between the adjustment pin and ground.

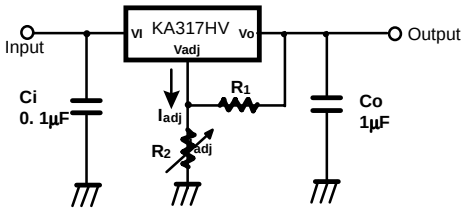
Typical Application



$$V_O = 1.25V\ (1 + R_2/R_1) + I_{adj} R_2$$

Figure 5. Programmable Regulator

C_i is required when regulator is located an appreciable distance from power supply filter.
C_O is not needed for stability, however, it does improve transient response.
Since I_{ADJ} is controlled to less than 100µA, the error associated with this term is negligible in most applications.
