

## Aeromat air circuit breakers

type AE 1000-SS / AE 3200-SS

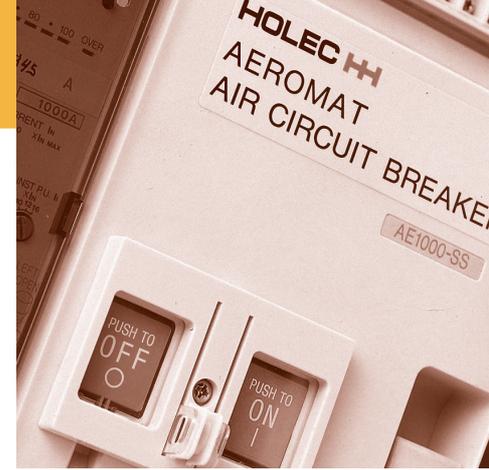

1000 A - 1250 A - 1600 A - 2000 A - 2500 A - 3200 A, 690 V~

Aeromat state-of-the-art air circuit breakers are specially suitable for switchboards in industries and utility buildings where high safety and reliability requirements, together with small dimensions apply. A complete range of electronic trip relays for standard and special application guarantees optimum operation under a wide variety of conditions.

Detailed ordering information on request.

### Characteristics

- 3-pole and 4-pole in fixed and withdrawable design;
- Very compact construction due to the use of new synthetic materials;
- Max. switch height 430 mm;
- Only two circuit breaker sizes: 1000 A up to 1600 A and 2000 A up to 3200 A;
- High short-circuit capacity: 65 kA (up to 1600 A) and 85 kA (up to 3200 A) at 500 V~;
- Minimum arc discharge rate allows closely spaced stacking in switchgear cubicles;
- Negligible maintenance;
- Relatively light weight due to the restricted number of parts and the consistent application of synthetic resins;
- High accuracy together with high reliability;
- Contemporary modern styling.

### Electronic trip relay

A wide range of protection functions is available, such as:

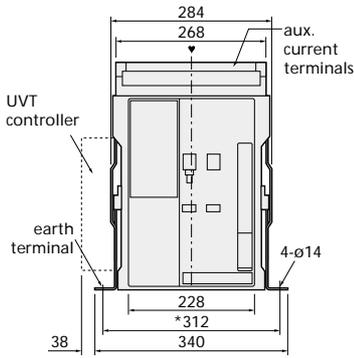

- Pre-alarm at overload currents;
- Temperature alarm when breaker contacts reach inadmissibly high temperatures;
- Ground fault trip or alarm function;
- Residual current alarm or tripping facility;
- Protection against overcurrent in neutral pole due to third harmonic wave forms generated from loads with d.c. power supplies, etc.;
- Load current LED indication;
- Load current measurement of the largest phase current;
- Special electronic trip relay to protect industrial and marine use generators;
- Independent effective value (r.m.s.) detection for each phase to cope with increasing use of electronic devices;
- Expanded discrimination range with making current release (MCR) function.
