## Single Chip TV Chroma/Luminance Processor

### Features

- All Chroma Processing and Demodulating Circuitry on a Single Chip in a 28 Lead Plastic Package
- Phase Locked Subcarrier Regeneration Utilizing Sample and Hold Techniques
- Supplementary ACC with Overload Detector to Prevent Over Saturation of the Picture Tube
- Linear DC Controls for Chroma Gain and Tint
- Dynamic "Flesh Correction" - Corrects Purple and Green Flesh Colors without Affecting Primary Colors
- Balanced Chroma Demodulators with Low Output Impedance for Direct Coupling
- Internal RF Filtering
- Requires Few External Components
- Automatic Beam Limiter
- Chroma Luminance Tracking Picture Control

### Description

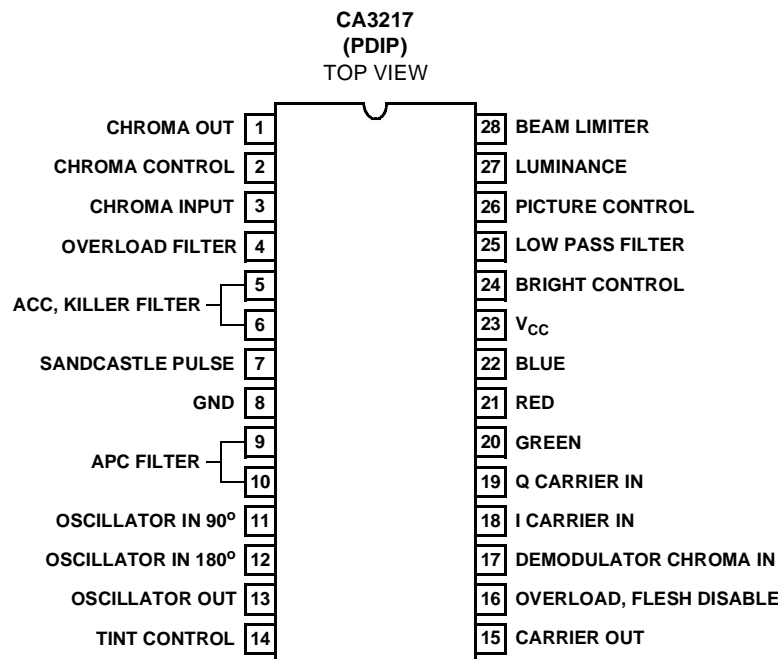

The Harris CA3217E (Note) is a monolithic silicon integrated circuit. It contains all the required circuit functions between the video detector and the picture tube RGB driver stages of a color television receiver. The CA3217E decodes the chrominance signals and then produces three different color signals that are internally combined with the luminance to develop the RGB signals. The picture saturation, hue and brightness DC controls are externally adjustable by the viewers. The AFPC, ACC, Dynamic flesh control, Beam limiting and Gate black level (Brightness) control are servo loops used to stabilize the RGB output and reduce frequent manual adjustment. The automatic beam limiter circuit reduces picture contrast and brightness to prevent excessive drive output at the picture tube.

NOTE: Formerly Developmental Type No. TA10806.

### Ordering Information

PART NUMBER	TEMPERATURE RANGE	PACKAGE
CA3217E	-40°C to +85°C	28 Lead PDIP

### Pinout

# Specifications CA3217

## Absolute Maximum Ratings

DC Voltage (Between Terminals 23 and 8) ..... 14.0V  
 Power Dissipation  
 Up to  $T_A = +55^\circ\text{C}$  ..... 1.27W  
 Above  $T_A = +55^\circ\text{C}$  ..... Derate Linearly at 13.3mW/ $^\circ\text{C}$   
 Junction Temperature (Plastic Package) ..... +150 $^\circ\text{C}$   
 Storage Temperature Range ..... -65 $^\circ\text{C}$  to +150 $^\circ\text{C}$   
 Lead Temperature (Soldering 10s) ..... +300 $^\circ\text{C}$

## Operating Conditions

Operating Temperature Range ..... -40 $^\circ\text{C}$  to +85 $^\circ\text{C}$

*CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.*

## Electrical Specifications $T_A = +25^\circ\text{C}$

### NOTES:

1. With  $K_7$  energized and frequency counter at D vary  $C_1$  for 3.579175MHz. Then with  $K_4$  energized, check for pull-in. Repeat for frequency tuned to 3.579875MHz. For all other tests tune to 3.579545MHz  $\pm 10\text{Hz}$ .
2. Vary  $S_2$  for 1.5V<sub>p-p</sub> at Pin 21.
3. % of 100% ACC.
4. Adjust  $C_1$  for 3.579545MHz  $\pm 10\text{Hz}$ . Adjust  $S_2$  for 1.6V<sub>p-p</sub> at Pin 22 and 0 reference, then adjust  $S_5$  for minimum at P21. Read and record  $S_5$  voltage.
5. Black to White.
6.  $T_{17} = T_{17}/T_{16}$ .
7. Adjust  $S_3$  for 4.0V<sub>p-p</sub>.
8. AC amplitude = 50mV<sub>p-p</sub> reference 15kHz.
9. Adjust beam limiter to 10.7V.
10. Adjust beam limiter to 9.8V.
11. Adjust  $S_2$  for 1.5V<sub>p-p</sub> at Pin 21, then calculate P20/P21 and P22/P21.

## Specifications CA3217

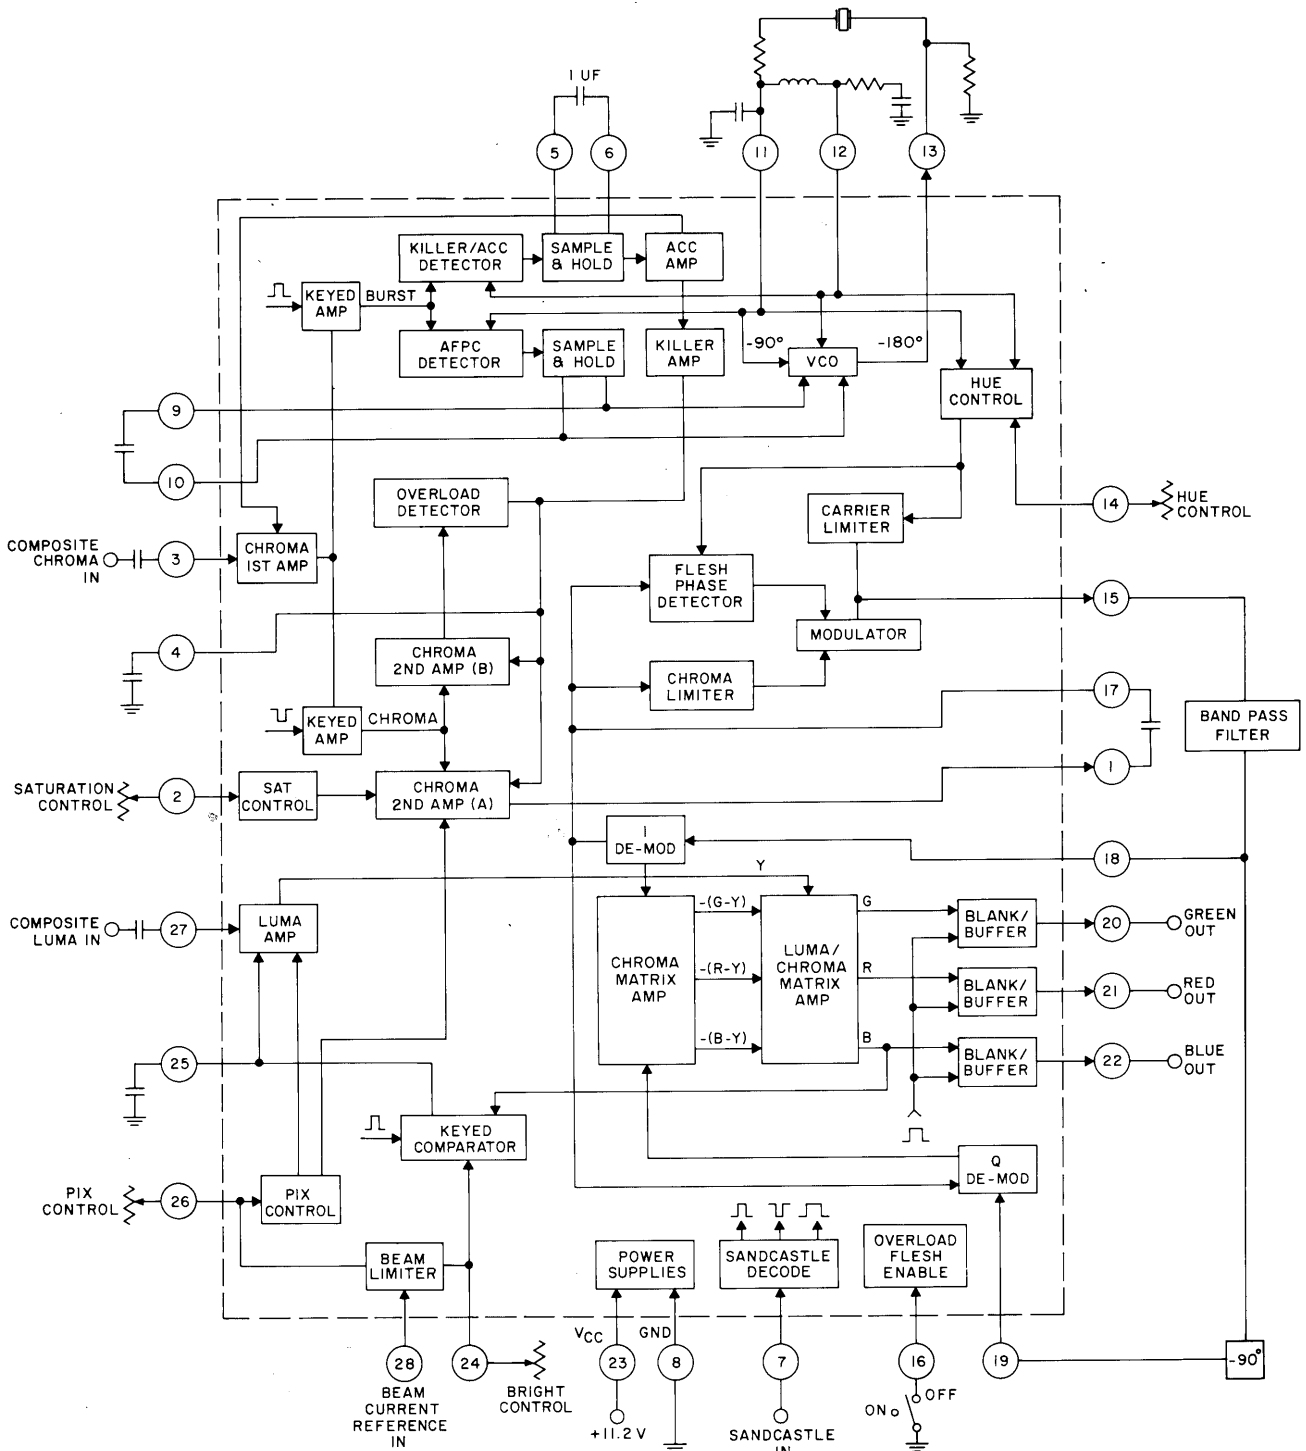

### Typical Performance of the CA3217E

FUNCTION	TYPICAL DATA	
Nominal Supply	11.2V	
Nominal Dissipation	500mW	
Oscillator Stability		
Supply Variation $10^{-14}V$	5Hz	
Variation With Temperature ( $\Delta T = +50^{\circ}C$ )	25Hz	
AFPC Characteristics		
DC Loop Gain	33Hz/Degree	
Pull In Range	$\pm 500Hz$	
ACC Characteristics		
100% Chroma Input Level	250mV <sub>P-P</sub> on Red Bar	
3dB Point	At 20% Nominal Input Level	
Hue Control Range	100°	
Saturation Control Range	40dB (Min)	
DEMODULATOR PARAMETERS	RELATIVE AMPLITUDE	ANGLE
R - Y	1.0	93°
B - Y	1.2	2°
G - Y	0.3	258°
Bandwidth (Chroma)	900kHz	
Flesh Control	Primary Control in the +1 Half Plane	
Chroma Overload Control	Two Levels	
Picture Control	40dB	
Brightness Control	Black Level Clamped on 3V to 5V Level	
Beam Limiting	On Picture and Brightness Controls	
Luma Bandwidth	5MHz (Min)	
Sandcastle Input		
1.2 - 2.3V	Blanking	
>3.3V	Burst Gate	
Maximum Linear Output		
R	5V	
G	3V	
B	3.7V
