

7 A VERY LOW DROP POSITIVE VOLTAGE REGULATOR ADJUSTABLE AND FIXED

PRELIMINARY DATA

- OUTPUT CURRENT LIMIT
- LOW DROPOUT VOLTAGE: TYPICALLY 400mV AT 7A OUTPUT CURRENT
- OUTPUT VOLTAGE REMOTE SENSE PIN
- FAST TRANSIENT RESPONSE
- THERMAL SHUTDOWN PROTECTION WITH HYSTERESIS
- WIDE OPERATING TEMPERATURE RANGE -40°C TO 125°C
- NO SUPPLY SEQUENCING PROBLEMS IN DUAL SUPPLY MODE
- OUTPUT VOLTAGES AVAILABLE 1.5 V, 1.8V, 2.5 V, 3.0 V, 3.3 V ADJUSTABLE.

DESCRIPTION

The LD1580 is a very low dropout positive linear voltage regulator particularly suitable in applications requiring output currents up to 7 A. The LD1580 typical dropout voltage is 400mV at 7A while it decreases at lighter loads.

This very low dropout is achieved thanks to a second input voltage pin, named $V_{CONTROL}$, which is also responsible of the output power stage driving.

The LD1580 is provided with an output voltage remote sense pin which reduces dramatically any

output voltage variations that could occur due to load changes.

On fixed voltage devices, the ADJ pin is still available. A small capacitor on this pin helps to improve transient response.

SCHEMATIC DIAGRAM

LD1580

The LD1580 also features a built-in output current limit function and a thermal shutdown protection with hysteresis which prevents from excessive power dissipation in case of insufficient

heatsinking. On chip trimming allows the regulator to reach a very tight output voltage tolerance, within $\pm 2\%$ at the maximum output current and over the full temperature range.

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
V_{POWER}	DC V_{POWER} voltage	from -0.3 to 6	V
$V_{CONTROL}$	DC $V_{CONTROL}$ voltage	from -0.3 to 13	V
I_{OUT}	Output Current	Internally Limited	A
P_D	Power Dissipation	Internally Limited	W
T_{stg}	Storage Temperature Range	-55 to +150	°C
T_{op}	Operating Junction Temperature Range	-40 to +125	°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these condition is not implied.

Note 1: Measured when the V_{OUT} voltage drops below 100mV with respect to its nominal value.

Note 2: Measured when the V_{OUT} voltage drops below 2% with respect to its nominal value.

TYPICAL CHARACTERISTICS (unless otherwise specified $T_J=25^\circ\text{C}$, $C_P=330\mu\text{F}$, $C_C=10\mu\text{F}$, $C_{\text{OUT}}=100\mu\text{F}$)
