

# SN74LS85

## 4-Bit Magnitude Comparator

The SN74LS85 is a 4-Bit Magnitude Comparator which compares two 4-bit words (A, B), each word having four Parallel Inputs ( $A_0$ – $A_3$ ,  $B_0$ – $B_3$ );  $A_3$ ,  $B_3$  being the most significant inputs. Operation is not restricted to binary codes, the device will work with any monotonic code. Three Outputs are provided: “A greater than B” ( $O_{A>B}$ ), “A less than B” ( $O_{A<B}$ ), “A equal to B” ( $O_{A=B}$ ). Three Expander Inputs,  $I_{A>B}$ ,  $I_{A<B}$ ,  $I_{A=B}$ , allow cascading without external gates. For proper compare operation, the Expander Inputs to the least significant position must be connected as follows:  $I_{A<B} = I_{A>B} = L$ ,  $I_{A=B} = H$ . For serial (ripple) expansion, the  $O_{A>B}$ ,  $O_{A<B}$  and  $O_{A=B}$  Outputs are connected respectively to the  $I_{A>B}$ ,  $I_{A<B}$ , and  $I_{A=B}$  Inputs of the next most significant comparator, as shown in Figure 1. Refer to Applications section of data sheet for high speed method of comparing large words.

The Truth Table on the following page describes the operation of the SN74LS85 under all possible logic conditions. The upper 11 lines describe the normal operation under all conditions that will occur in a single device or in a series expansion scheme. The lower five lines describe the operation under abnormal conditions on the cascading inputs. These conditions occur when the parallel expansion technique is used.

- Easily Expandable
- Binary or BCD Comparison
- $O_{A>B}$ ,  $O_{A<B}$ , and  $O_{A=B}$  Outputs Available

### GUARANTEED OPERATING RANGES

Symbol	Parameter	Min	Typ	Max	Unit
$V_{CC}$	Supply Voltage	4.75	5.0	5.25	V
$T_A$	Operating Ambient Temperature Range	0	25	70	°C
$I_{OH}$	Output Current – High			–0.4	mA
$I_{OL}$	Output Current – Low			8.0	mA

Figure 1. Comparing Two n-Bit Words

## APPLICATIONS

Figure 2 shows a high speed method of comparing two 24-bit words with only two levels of device delay. With the technique shown in Figure 1, six levels of device delay result

when comparing two 24-bit words. The parallel technique can be expanded to any number of bits, see Table 1.

Table 1

WORD LENGTH	NUMBER OF PKGS.
1–4 Bits	1
5–24 Bits	2–6
25–120 Bits	8–31

### NOTE:

The SN74LS85 can be used as a 5-bit comparator only when the outputs are used to drive the A<sub>0</sub>–A<sub>3</sub> and B<sub>0</sub>–B<sub>3</sub> inputs of another SN74LS85 as shown in Figure 2 in positions #1, 2, 3, and 4.
