## Low-Voltage 1:5 Dual Diff. LVECL/LVPECL/LVEPECL/HSTL Clock Driver

The MC100LVEP210 is a low skew 1-to-5 dual differential driver, designed with clock distribution in mind. The LVECL/LVPECL input signals can be either differential or single-ended if the  $V_{BB}$  output is used. The signal is fanned out to 5 identical differential outputs. HSTL inputs can be used when the EP210 is operating in LVPECL mode.

The LVEP210 specifically guarantees low output-to-output skew. Optimal design, layout, and processing minimize skew within a device and from lot to lot.

To ensure the tight skew specification is realized, both sides of the differential output need to be terminated identically into  $50\Omega$  even if only one side is being used. When fewer than all ten pairs are used, identically terminate all the output pairs on the same package side whether used or unused. If no outputs on a single side are used, then leave these outputs open (unterminated). This will maintain minimum output skew. Failure to do this will result in a 10–20ps loss of skew margin (propagation delay) in the output(s) in use.

The MC100LVEP210, as with most other LVECL devices, can be operated from a positive  $V_{CC}$  supply in LVPECL mode. This allows the LVEP210 to be used for high performance clock distribution in +3.3V or +2.5V systems. Single ended input operation is limited to a  $V_{CC} \geq 3.0V$  in PECL mode, or  $V_{EE} \leq -3.0V$  in ECL mode.

Designers can take advantage of the LVEP210's performance to distribute low skew clocks across the backplane or the board. In a LVPECL environment, series or Thevenin line terminations are typically used as they require no additional power supplies. For more information on using PECL, designers should refer to Application Note AN1406/D.

- 100ps Part-to-Part Skew
  - 35ps Output-to-Output Skew
  - Differential Design
  - $V_{BB}$  Output
  - 475ps Typical Propagation Delay
  - High Bandwidth to 1.5GHz Typical
  - LVPECL and HSTL mode: 2.375V to 3.8V  $V_{CC}$  with  $V_{EE} = 0V$
  - LVECL mode: 0V  $V_{CC}$  with  $V_{EE} = -2.375V$  to  $-3.8V$
  - Internal Input Resistors: Pulldown on D,  $\overline{D}$
  - Pullup and Pulldown on  $\overline{CLK}$
  - ESD Protection: >2KV HBM, >100V MM
  - Moisture Sensitivity Level 2
- For Additional Information, See Application Note AND8003/D
- Flammability Rating: UL-94 code V-0 @ 1/8", Oxygen Index 28 to 34
  - Transistor Count = 461 devices
