Quad OR/NOR Gate

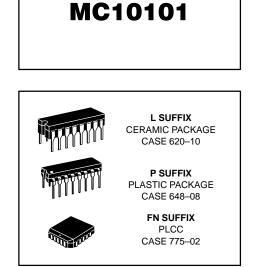

The MC10101 is a quad 2-input OR/NOR gate with one input from each gate common to pin 12.

 $\begin{array}{l} \mathsf{P}_D = 25 \text{ mW typ/gate (No Load)} \\ \mathsf{t}_{pd} = 2.0 \text{ ns typ} \\ \mathsf{t}_{f}, \, \mathsf{t}_{f} = 2.0 \text{ ns typ } (20\%\text{--}80\%) \end{array}$

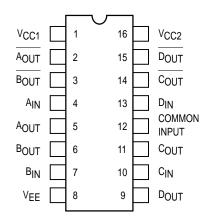

DIP PIN ASSIGNMENT

Pin assignment is for Dual–in–Line Package. For PLCC pin assignment, see the Pin Conversion Tables on page 6–36 of the Motorola MECL Data Book (DL122/D).

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
