# **Quad Exclusive OR Gate**

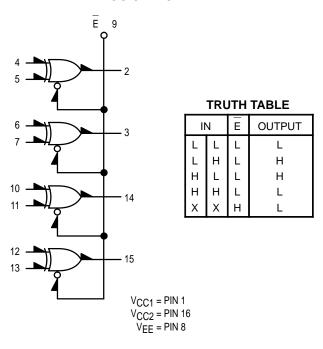

The MC10113 is a quad Exclusive OR gate, with an enable common to all four gates. The outputs may be wire—ORed together to perform a 4-bit comparison function (A = B). The enable is active low.

 $P_D = 175 \text{ mW typ/pkg (No Load)}$ 

 $t_{pd} = 2.5 \text{ ns typ}$ 

 $t_f$ ,  $t_f = 2.0$  ns typ (20% to 80%)

## DIP PIN ASSIGNMENT

Pin assignment is for Dual–in–Line Package. For PLCC pin assignment, see the Pin Conversion Tables on page 6–11 of the Motorola MECL Data Book (DL122/D).

<sup>\*</sup> Individually test each input applying VIH or VIL to input under test.

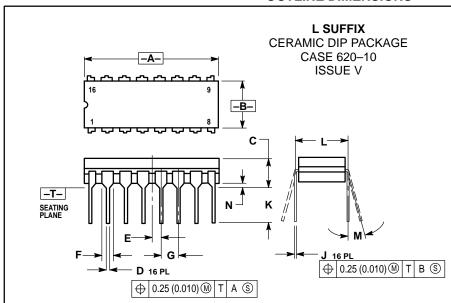

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50–ohm resistor to –2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
