# **Dual J-K Master-Slave Flip-Flop**

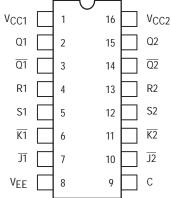

The MC10135 is a dual master–slave dc coupled J–K flip–flop. Asynchro– nous set (S) and reset (R) are provided. The set and reset inputs override the clock.

A common clock is provided with separate  $\overline{J}$ - $\overline{K}$  inputs. When the clock is static, the  $\overline{J}$ - $\overline{K}$  inputs do not effect the output.

The output states of the flip–flop change on the positive transition of the clock.

- $P_D = 280 \text{ mW typ/pkg (No Load)}$
- $f_{Tog} = 140 \text{ MHz typ}$
- $t_{pd} = 3.0 \text{ ns typ}$
- $t_r$ ,  $t_f = 2.5$  ns typ (20%–80%)

Each MECL 10,000 series circuit has been designed to meet the dc specifications shown in the test table, after thermal equilibrium has been established. The circuit is in a test socket or mounted on a printed circuit board and transverse air flow greater than 500 linear fpm is maintained. Outputs are terminated through a 50-ohm resistor to -2.0 volts. Test procedures are shown for only one gate. The other gates are tested in the same manner.
