- Terminals (phone, fax, modem...) and central of-fice equipment

DESCRIPTION

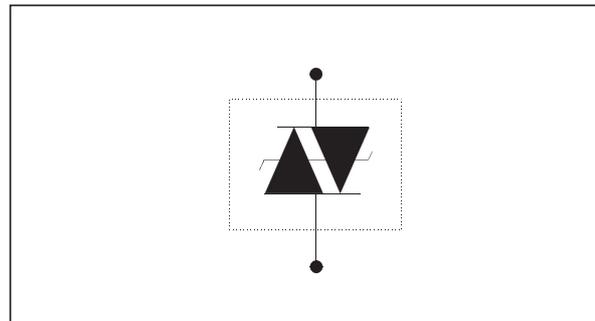

The SMP100MC-xxx series is a micro capacitance transient surge arrestor designed for the protection of high debit rate communication equipment. Its micro capacitance avoids any distortion of the signal and is compatible with digital line cards (ADSL, VDSL, T1/E1, ISDN...).

BENEFITS

Trisils are not subject to ageing and provide a fail safe mode in short circuit for a better protection. They are used to help equipment to meet main standards such as UL1950, IEC950 / CSA C22.2 and UL1459. They have UL94 V0 approved resin. SMB package is JEDEC registered (DO-214AA). Trisils are UL497B approved (file: E136224) and comply with the following standards GR-1089 Core, ITU-T-K20/K21, VDE0433, VDE0878, IEC61000-4-5 and FCC part 68.

TEST CIRCUIT 1 FOR DYNAMIC I_{BO} AND V_{BO} PARAMETERS

TEST CIRCUIT 2 FOR I_{BO} and V_{BO} parameters :

TEST CIRCUIT 3 FOR I_H PARAMETER

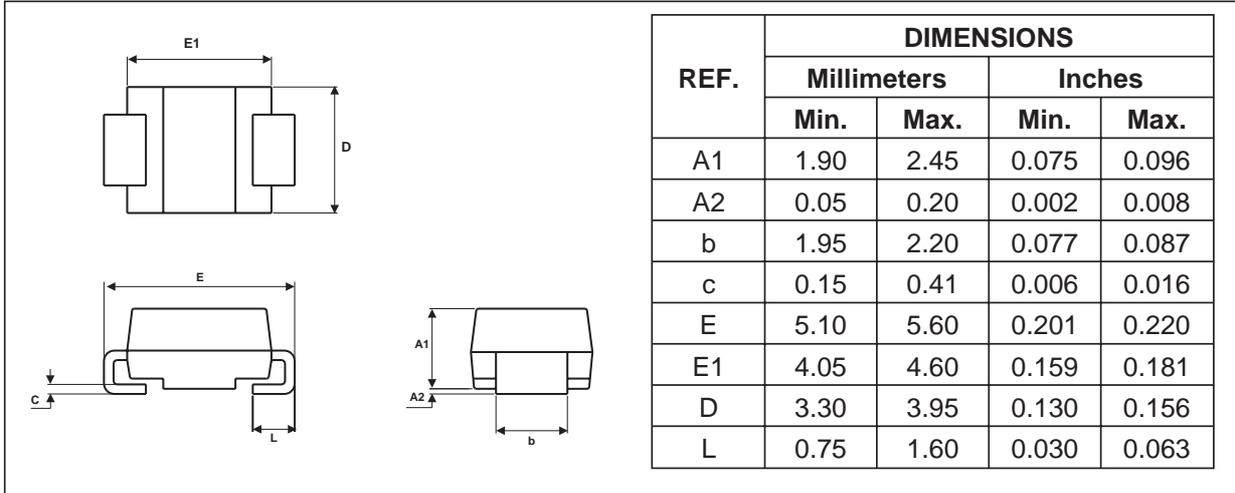

This is a GO-NO GO test which allows to confirm the holding current (I_H) level in a functional test circuit.

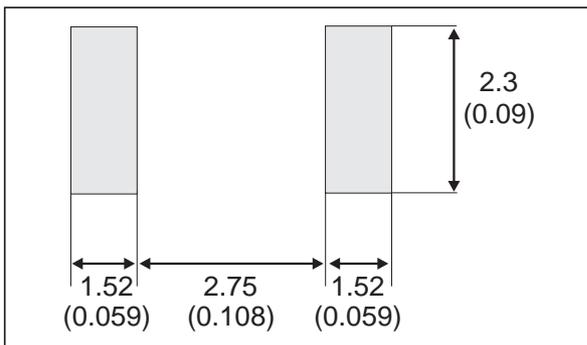

TEST PROCEDURE :

- Adjust the current level at the I_H value by short circuiting the D.U.T.
- Fire the D.U.T. with a surge current : $I_{pp} = 10A$, $10/1000 \mu s$.
- The D.U.T. will come back to the off-state within 50 ms max.
