### DESCRIPTION

The STV6436 is a filtered video output interface for STB and DVD applications.

After removing D/A conversion noises using integrated low pass filters, the STV6436 adapts in amplitude and impedance the video signals coming from the digital decoder for transmission, via  $75\Omega$  adapted cables, to the TV set, VCR and auxiliary devices.

The STV6436 is powered by a 5V supply.

The STV6436 is fully compatible with STi55xx Digital Decoders.

The STV6436 is mounted in a SO24 package (STV6436S) or in a DIP package (STV6436D).
