

## SI-3000F Series

# 5-Terminal, Multi-Function, Full-Mold, Low Dropout Voltage Dropper Type

### ■Features

- Compact full-mold package (equivalent to TO220)
- Output current: 1.0A
- Low dropout voltage:  $V_{DIF} \leq 1V$  (at  $I_o = 1.0A$ )
- Variable output voltage (rise only)
  - May be used for remote sensing (excluding SI-3025F)
- Output ON/OFF control terminal is compatible with LS-TTL.  
(It may be directly driven by LS-TTL or standard CMOS logic.)
- Built-in foldback overcurrent, overvoltage, thermal protection circuits
- Variable output voltage type (SI-3025F) also available

### ■Applications

- For stabilization of the secondary stage of switching power supplies
- Electronic equipment

### ■Absolute Maximum Ratings

(T<sub>a</sub>=25°C)

| Conditions  | V <sub>C</sub> =0.4V             |  |      |                  |   |      |                  |   |       |                  |   |       |                  |   |       |                  |   |          |                  |       |      |

\*1: "A" may be indicated to the right of the Sanken logo.

\*2: V<sub>IN(max)</sub> and I<sub>O(max)</sub> are restricted by the relation P<sub>D(max)</sub>=(V<sub>IN</sub>-V<sub>O</sub>)•I<sub>O</sub>=14W(SI-3240F: 18W).

\*3: Refer to the dropout voltage.(Refer to Setting DC Input Voltage on page 7.)

\*4: I<sub>s1</sub> is specified at -5(%) drop point of output voltage V<sub>O</sub> on the condition that V<sub>IN</sub>=V<sub>O</sub>+3V, I<sub>O</sub>=0.5A.

\*5: Output is ON even when output control terminal VC is open. Each input level is equivalent to LS-TTL. Therefore, it may be directly driven by an LS-TTL circuit.

\*6: When setting output voltage to 5V or less, input voltage needs to be set to 6V or over to operate stably.

\*7: A foldback type overcurrent protection circuit is built into the IC regulator. Therefore, avoid using it for the following applications as it may cause starting errors:

- (1) Constant current load (2) Plus/minus power (3) Series power (4) V<sub>O</sub> adjustment by raising ground voltage

■Standard External Circuit

■T<sub>a</sub>-P<sub>d</sub> Characteristics

## External Variable Output Voltage Circuit (Except SI-3025F)

### 1. Variable output voltage with a single external resistor

The output voltage may be increased by inserting resistor  $R_{EX}$  between terminals No.4 (sensing terminal) and No.3 (output terminal). The current  $I_{REX}$  flowing into terminal No.4 is 1mA (typ.), therefore the adjusted output voltage  $V_{OUT}$  is:

$$V_O = V_{04} + I_{REX} \cdot R_{EX} \quad *V_{04}: \text{output voltage of SI-3000F series}$$

However, the internal resistor (between terminals No. 4 and No.1) is a semiconductor resistor, which has approximately thermal characteristics of  $+0.2\%/^{\circ}\text{C}$ .

It is important to keep the thermal characteristics in mind when adjusting the output voltage.

### 2. Variable output voltage with two external resistors

The output voltage may be increased by inserting resistors  $R_{EX1}$  between terminals No.4 (sensing terminal) and No.3 (output terminal) and  $R_{EX2}$  between terminals No.4 and No.1 (ground terminal).

The current  $I_{4IN}$  flowing into terminal No.4 is 1mA (typ.) so the thermal characteristics may be improved compared to the method shown in 1 by setting the external current  $I_{REX1}$  at approximately 5 times the value of  $I_{4IN}$  (stability coefficient  $S=5$ ).

The adjusted output voltage  $V_{OUT}$  in this case is:

$$\begin{cases} V_O = V_{04} + R_{EX1} \cdot I_{REX1} \\ I_{REX1} = S \cdot I_{4IN} \end{cases}$$

The value of the external resistors may be obtained as follows:

$$R_{EX1} = \frac{V_O - V_{04}}{S \cdot I_{4IN}}, \quad R_{EX2} = \frac{V_{04}}{(S-1) \cdot I_{4IN}}$$

\* $V_{04}$ : Output voltage of SI-3000F series

S: Stability coefficient of  $I_{4IN}$  (may be set to any value)

Note: In the SI-3000F series, the output voltage increase can be adjusted as mentioned above. However, when the rise is set to approximately 10V compared to output voltage  $V_{04}$ , the necessary output current may not be obtained due to the S.O.A. protection circuit in the SI-3000F series.

■Typical Characteristics

( $T_a=25^\circ\text{C}$ )

**$I_o$  vs.  $V_{DIF}$  Characteristics**

**Temperature Coefficient of Output Voltage(SI-3050F)**

**Output ON/OFF Control(SI-3050F)**

**Output Voltage(SI-3050F)**

**Output Voltage(SI-3120F)**
