

STB7100

Low-cost set-top box decoder chip for MPEG-4 AVC and HD MPEG-2

DATA BRIEF

DESCRIPTION

Demonstrating its continued leadership in STB ICs, STMicroelectronics introduces the first fully integrated high-definition set-top box IC with an advanced low-bit rate video decoder.

The STB7100 is a single-chip video decoder supporting the H.264/AVC advanced video decoding standard, Microsoft's VC1 standard and high definition MPEG2. As well as STBs, the STB7100 can be used in DVD and automotive applications.

The STB7100 demultiplexes, descrypts, decodes and outputs HD and SD video streams with associated multi-channel audio. A dual display compositor provides mixing of graphics and video with independent composition for TV/monitor and VCR outputs. SATA and USB interfaces are provided to enable low-cost connectivity to hard-disk drives and low-cost system expansion.

Package (35 x 35 PGBA)

Figure 1. H.264/AVC low-bit rate set-top box decoder

FEATURES

- 300 MHz SH4-202 CPU core
- Linux and WindowsCE capable
- Transport stream merger/router
- Programmable transport stream interface (PTI)
- Advanced video decoder
 - H264/AVC HP@L4 and MPEG2 MP@HL
 - Microsoft VC1
- Graphics engine/blitter
- Dual display composition
 - High definition and standard definition
- Main and auxiliary output video DACs
- DVI, HDMI output
- Digital video & audio inputs
- Programmable audio decoder
 - MPEG1 I/II, MP3, Dolby® digital, AAC LC, high efficiency AAC
- USB 2.0 host controller
- DVR capable with a serial ATA HDD interface.

PART NUMBERING
