**HARDWARE DESCRIPTION**

The ST19AF08, a member of the ST19 device family, is a serial access microcontroller especially designed for very large volume and cost competitive secure portable objects.

The ST19AF08 is based on a STMicroelectronics 8-bit CPU and includes on chip memories: User ROM, User RAM and User EEPROM with state of the art security features.

ROM, RAM and EEPROM memories can be configured into partitions with customized access rules. Access from any memory area to another is protected by hardware FIREWALLS.

Access rules are User defined and can be selected by mask options or during the life of the product.

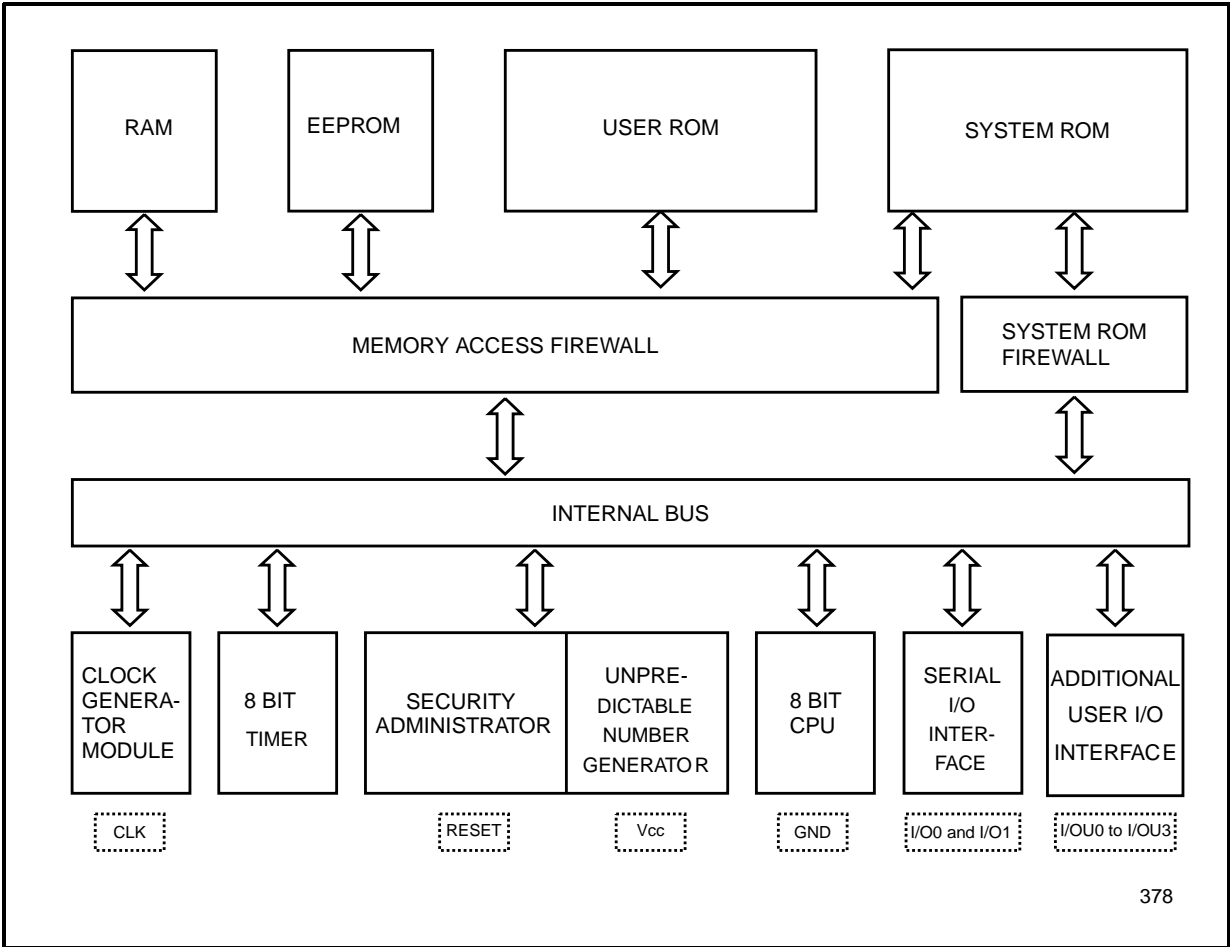

It is manufactured using the highly reliable ST CMOS EEPROM submicron technology.

As with all the other ST19 family members, it is fully compatible with the ISO 7816 standards for Smartcard applications.

**SOFTWARE DEVELOPMENT**

Software development and firmware (ROM code/options) generation are completed by the ST19-HDSX development system.
