Measurement Equipment

The Toshiba TLP192G consists of a gallium arsenide infrared emitting diode optically coupled to a photo-MOSFET in a 6-pin SOP package.

This photorelay has a characteristic of high-withstanding voltage between output pins which enables TLP192G to be applied in hook relays and dial-pulse for modems and facsimiles.

Moreover, the TLP192G is used for PCMCIA-compliant card modems because the maximum mounted height of SOP package is as small as 2.1 mm.
