# Regarding the change of names mentioned in the document, such as Hitachi Electric and Hitachi XX, to Renesas Technology Corp.

The semiconductor operations of Mitsubishi Electric and Hitachi were transferred to Renesas Technology Corporation on April 1st 2003. These operations include microcomputer, logic, analog and discrete devices, and memory chips other than DRAMs (flash memory, SRAMs etc.) Accordingly, although Hitachi, Hitachi, Ltd., Hitachi Semiconductors, and other Hitachi brand names are mentioned in the document, these names have in fact all been changed to Renesas Technology Corp. Thank you for your understanding. Except for our corporate trademark, logo and corporate statement, no changes whatsoever have been made to the contents of the document, and these changes do not constitute any alteration to the contents of the document itself.

Renesas Technology Corp. Customer Support Dept. April 1, 2003

#### **Cautions**

Keep safety first in your circuit designs!

Renesas Technology Corporation puts the maximum effort into making semiconductor products better
and more reliable, but there is always the possibility that trouble may occur with them. Trouble with
semiconductors may lead to personal injury, fire or property damage.
Remember to give due consideration to safety when making your circuit designs, with appropriate
measures such as (i) placement of substitutive, auxiliary circuits, (ii) use of nonflammable material or
(iii) prevention against any malfunction or mishap.

#### Notes regarding these materials

- 1. These materials are intended as a reference to assist our customers in the selection of the Renesas Technology Corporation product best suited to the customer's application; they do not convey any license under any intellectual property rights, or any other rights, belonging to Renesas Technology Corporation or a third party.
- 2. Renesas Technology Corporation assumes no responsibility for any damage, or infringement of any third-party's rights, originating in the use of any product data, diagrams, charts, programs, algorithms, or circuit application examples contained in these materials.
- 3. All information contained in these materials, including product data, diagrams, charts, programs and algorithms represents information on products at the time of publication of these materials, and are subject to change by Renesas Technology Corporation without notice due to product improvements or other reasons. It is therefore recommended that customers contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor for the latest product information before purchasing a product listed herein.
  - The information described here may contain technical inaccuracies or typographical errors. Renesas Technology Corporation assumes no responsibility for any damage, liability, or other loss rising from these inaccuracies or errors.
  - Please also pay attention to information published by Renesas Technology Corporation by various means, including the Renesas Technology Corporation Semiconductor home page (http://www.renesas.com).
- 4. When using any or all of the information contained in these materials, including product data, diagrams, charts, programs, and algorithms, please be sure to evaluate all information as a total system before making a final decision on the applicability of the information and products. Renesas Technology Corporation assumes no responsibility for any damage, liability or other loss resulting from the information contained herein.
- 5. Renesas Technology Corporation semiconductors are not designed or manufactured for use in a device or system that is used under circumstances in which human life is potentially at stake. Please contact Renesas Technology Corporation or an authorized Renesas Technology Corporation product distributor when considering the use of a product contained herein for any specific purposes, such as apparatus or systems for transportation, vehicular, medical, aerospace, nuclear, or undersea repeater use.
- 6. The prior written approval of Renesas Technology Corporation is necessary to reprint or reproduce in whole or in part these materials.
- 7. If these products or technologies are subject to the Japanese export control restrictions, they must be exported under a license from the Japanese government and cannot be imported into a country other than the approved destination.
  - Any diversion or reexport contrary to the export control laws and regulations of Japan and/or the country of destination is prohibited.
- 8. Please contact Renesas Technology Corporation for further details on these materials or the products contained therein.

4M High Speed SRAM (512-kword  $\times$  8-bit)

ADE-203-1197C (Z)

Rev. 2.0 Feb. 3, 2003

## Description

The HM628511HC Series is a 4-Mbit high speed static RAM organized 512-k word  $\times$  8-bit. It has realized high speed access time by employing CMOS process (6-transistor memory cell) and high speed circuit designing technology. It is most appropriate for the application which requires high speed, high density memory and wide bit width configuration, such as cache and buffer memory in system. It is packaged in 400-mil 36-pin plastic SOJ.

#### **Features**

• Single 5.0 V supply:  $5.0 \text{ V} \pm 10\%$ 

• Access time: 10/12 ns (max)

• Completely static memory

- No clock or timing strobe required

• Equal access and cycle times

• Directly TTL compatible

— All inputs and outputs

• Operating current: 140/130 mA (max)

• TTL standby current: 40 mA (max)

CMOS standby current: 5 mA (max)

: 1.2 mA (max) (L-version)

• Data retention current: 0.8 mA (max) (L-version)

• Data retention voltage: 2 V (min) (L-version)

• Center V<sub>CC</sub> and V<sub>ss</sub> type pin out

## **Ordering Information**

## **Pin Arrangement**

## **Pin Description**

| Pin name        | Function          |
|-----------------|-------------------|
| A0 to A18       | Address input     |
| I/O1 to I/O8    | Data input/output |
| <del>CS</del>   | Chip select       |
| ŌĒ              | Output enable     |
| WE              | Write enable      |
| V <sub>cc</sub> | Power supply      |
| $V_{ss}$        | Ground            |
| NC              | No connection     |

## **Block Diagram**

#### **Operation Table**

| <del>CS</del> | ŌĒ | WE | Mode           | V <sub>cc</sub> current            | I/O    | Ref. cycle            |
|---------------|----|----|----------------|------------------------------------|--------|-----------------------|
| Н             | ×  | ×  | Standby        | I <sub>SB</sub> , I <sub>SB1</sub> | High-Z | _                     |
| L             | Н  | Н  | Output disable | I <sub>cc</sub>                    | High-Z | _                     |
| L             | L  | Н  | Read           | I <sub>cc</sub>                    | Dout   | Read cycle (1) to (3) |
| L             | Н  | L  | Write          | I <sub>cc</sub>                    | Din    | Write cycle (1)       |
| L             | L  | L  | Write          | I <sub>cc</sub>                    | Din    | Write cycle (2)       |

Note: H:  $V_{H}$ , L:  $V_{L}$ ,  $\times$ :  $V_{H}$  or  $V_{L}$ 

#### **Absolute Maximum Ratings**

| Parameter                                      | Symbol          | Value                            | Unit |  |
|--|-----------------|----------------------------------|------|--|
| Supply voltage relative to V <sub>ss</sub>     | V <sub>cc</sub> | -0.5 to +7.0                     | V    |  |
| Voltage on any pin relative to V <sub>ss</sub> | V <sub>T</sub>  | $-0.5^{*1}$ to $V_{cc}+0.5^{*2}$ | V    |  |
| Power dissipation                              | P <sub>T</sub>  | 1.0                              | W    |  |
| Operating temperature                          | Topr            | 0 to +70                         | °C   |  |
| Storage temperature                            | Tstg            | −55 to +125                      | °C   |  |
| Storage temperature under bias                 | Tbias           | −10 to +85                       | °C   |  |

Notes: 1.  $V_{T}$  (min) = -2.0 V for pulse width (under shoot)  $\leq$  6 ns.

2.  $V_T$  (max) =  $V_{cc}$ +2.0 V for pulse width (over shoot)  $\leq$  6 ns.

## **Recommended DC Operating Conditions**

 $(Ta = 0 \text{ to } +70^{\circ}C)$ 

| Parameter      | Symbol                         | Min    | Тур | Max                     | Unit |
|----------------|--------------------------------|--------|-----|-------------------------|------|
| Supply voltage | V <sub>cc</sub> *3             | 4.5    | 5.0 | 5.5                     | V    |
|                | V <sub>SS</sub> * <sup>4</sup> | 0      | 0   | 0                       | V    |
| Input voltage  | V <sub>IH</sub>                | 2.2    | _   | V <sub>CC</sub> + 0.5*2 | V    |
|                | V <sub>IL</sub>                | -0.5*1 | _   | 0.8                     | V    |

Notes: 1.  $V_{\parallel}$  (min) = -2.0 V for pulse width (under shoot)  $\leq$  6 ns.

- 2.  $V_{\text{IH}}$  (max) =  $V_{\text{CC}}$ +2.0 V for pulse width (over shoot)  $\leq$  6 ns.
- 3. The supply voltage with all  $\rm V_{cc}$  pins must be on the same level.
- 4. The supply voltage with all  $V_{\rm ss}$  pins must be on the same level.

#### **DC** Characteristics

 $(Ta = 0 \text{ to } +70^{\circ}\text{C}, V_{cc} = 5.0 \text{ V} \pm 10\%, V_{ss} = 0 \text{ V})$ 

| Parameter                                  |             | Symbol             | Min | Typ* <sup>1</sup> | Max   | Unit | Test conditions  |
|--|-------------|--------------------|-----|-------------------|-------|------|--|

|  |             |                    | *²  | 0.6*2             | 1.2*2 | _    |  |
| Output voltage                             |             | V <sub>OL</sub>    | _   | _                 | 0.4   | V    | I <sub>OL</sub> = 8 mA   |
|  |             | V <sub>OH</sub>    | 2.4 | _                 | _     | V    | $I_{OH} = -4 \text{ mA}$   |

Notes: 1. Typical values are at  $V_{cc} = 5.0 \text{ V}$ ,  $Ta = +25^{\circ}\text{C}$  and not guaranteed.

2. This characteristics is guaranteed only for L-version.

## Capacitance

 $(Ta = +25^{\circ}C, f = 1.0 \text{ MHz})$ 

| Parameter                  | Symbol           | Min | Тур | Max | Unit | Test conditions        |
|----------------------------|------------------|-----|-----|-----|------|------------------------|
| Input capacitance*1        | Cin              | _   | _   | 6   | pF   | Vin = 0 V              |
| Input/output capacitance*1 | C <sub>I/O</sub> | _   | _   | 8   | pF   | V <sub>I/O</sub> = 0 V |

Note: 1. This parameter is sampled and not 100% tested.

#### **AC Characteristics**

(Ta = 0 to +70°C,  $V_{cc}$  = 5.0 V ± 10%, unless otherwise noted.)

#### **Test Conditions**

• Input pulse levels: 3.0 V/0.0 V

• Input rise and fall time: 3 ns

• Input and output timing reference levels: 1.5 V

• Output load: See figures (Including scope and jig)

#### **Read Cycle**

|                  | -10  |   | -12   |  |  |  |

HM628511HC

Notes: 1. Transition is measured  $\pm 200$  mV from steady voltage with output load (B). This parameter is sampled and not 100% tested.

- 2. Address should be valid prior to or coincident with  $\overline{CS}$  transition low.
- 3. WE and/or CS must be high during address transition time.
- 4. If  $\overline{\text{CS}}$  and  $\overline{\text{OE}}$  are low during this period, I/O pins are in the output state. Then, the data input signals of opposite phase to the outputs must not be applied to them.
- 5. If the  $\overline{\text{CS}}$  low transition occurs simultaneously with the  $\overline{\text{WE}}$  low transition or after the  $\overline{\text{WE}}$  transition, output remains a high impedance state.
- 6.  $t_{AS}$  is measured from the latest address transition to the later of  $\overline{CS}$  or  $\overline{WE}$  going low.
- 7.  $t_{ws}$  is measured from the earlier of  $\overline{CS}$  or  $\overline{WE}$  going high to the first address transition.
- 8. A write occurs during the overlap of a low  $\overline{CS}$  and a low  $\overline{WE}$ . A write begins at the latest transition among  $\overline{CS}$  going low and  $\overline{WE}$  going low. A write ends at the earliest transition among  $\overline{CS}$  going high and  $\overline{WE}$  going high.  $t_{wp}$  is measured from the beginning of write to the end of write.
- 9.  $t_{\text{cw}}$  is measured from the later of  $\overline{\text{CS}}$  going low to the end of write.

## **Timing Waveforms**
