

## Linear Building Block – Quad Low Power Op Amp with Shutdown Modes

### Features

- Optimized for Single Supply Operation
- Small Package: 16-Pin QSOP
- Ultra Low Input Bias Current: Less than 100pA
- Low Quiescent Current, Operating: 20 $\mu$ A (Typ.), Shutdown Mode: 6 $\mu$ A (Typ.)
- Rail-to-Rail Inputs and Outputs
- Operates Down to 1.8V
- Can Shut Down One, Two or Three Op Amps

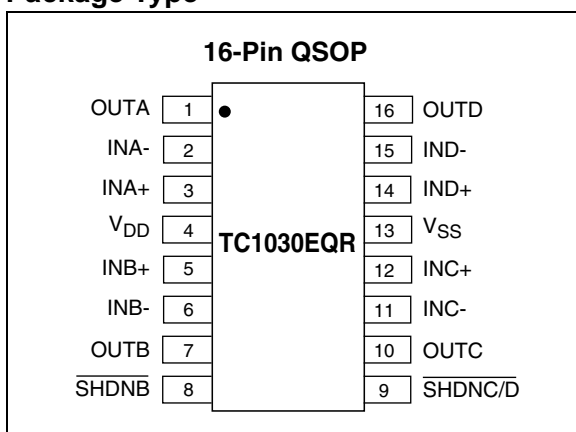

### Applications

- Power Management Circuits
- Battery Operated Equipment
- Consumer Products

### Device Selection Table

Part Number	Package	Temperature Range
TC1030EQR	16-Pin QSOP	-40°C to +85°C

### Package Type

### General Description

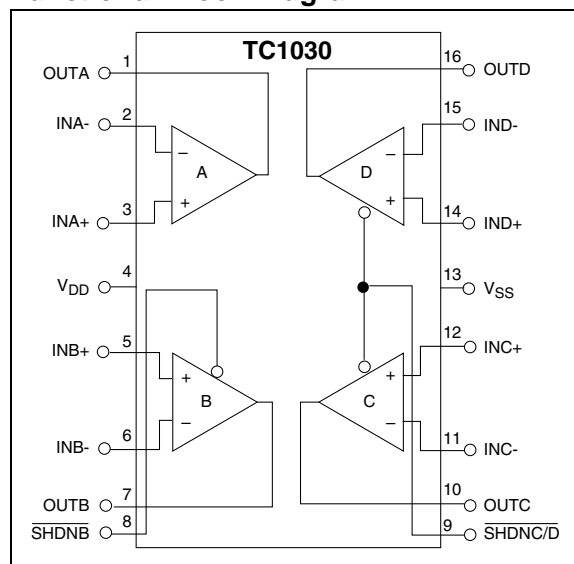

The TC1030 is a quad CMOS operational amplifier designed for low power applications. It has a typical operating supply current of 20 $\mu$ A which is constant over the supply voltage range of 1.8V to 5.5V.

Each op amp has rail-to-rail inputs and output which allow operation at low supply voltages with large input and output signal swings. Two active low shutdown pins are provided. One pin disables op amp B while the other disables op amps C and D. Op amp A is always active. When disabled, the outputs of op amps B, C and D are in a high impedance state.

Packaged in a 16-Pin QSOP, the TC1030 is ideal for battery operated applications.

The TC1030 is packaged in a 16-Pin QSOP, making it ideal for battery operated applications.

### Functional Block Diagram

## 1.0 ELECTRICAL CHARACTERISTICS

### ABSOLUTE MAXIMUM RATINGS\*

Supply Voltage .....	6.0V
Voltage on Any Pin .....	( $V_{SS} - 0.3V$ ) to ( $V_{DD} + 0.3V$ )
Junction Temperature.....	+150°C
Operating Temperature Range.....	-40°C to +85°C
Storage Temperature Range .....	-55°C to +150°C

\*Stresses above those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operation sections of the specifications is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability.

### TC1030 ELECTRICAL SPECIFICATIONS

Electrical Characteristics: Typical values apply at 25°C and $V_{DD} = 3.0V$ ; $T_A = -40^\circ$ to +85°C, and $V_{DD} = 1.8V$ to 5.5V, unless otherwise specified.						
Symbol	Parameter	Min	Typ	Max	Units	Test Conditions
$V_{DD}$	Supply Voltage	1.8	—	5.5	V	
<b>Shutdown Inputs</b>

## 2.0 PIN DESCRIPTION

The description of the pins are listed in Table 2-1.

**TABLE 2-1: PIN FUNCTION TABLE**

Pin No. (16-Pin QSOP)	Symbol	Description
1	OUTA	Op amp output.
2	INA-	Op amp inverting input.
3	INA+	Op amp non-inverting input.
4	V <sub>DD</sub>	Positive supply voltage.
5	INB+	Op amp non-inverting input.
6	INB-	Op amp inverting input.
7	OUTB	Op amp output.
8	$\overline{\text{SHDNB}}$	Shutdown op amp B.
9	$\overline{\text{SHDNC/D}}$	Shutdown op amps C and D.
10	OUTC	Op amp output.
11	INC-	Op amp inverting input.
12	INC+	Op amp non-inverting input.
13	V <sub>SS</sub>	Negative supply voltage.
14	IND+	Op amp non-inverting input.
15	IND-	Op amp inverting input.
16	OUTD	Op amp output.

## 3.0 DETAILED DESCRIPTION

The TC1030 is one of a series of very low power, linear building block products targeted at low voltage, single supply applications. The TC1030 minimum operating voltage is 1.8V, and maximum supply current is only 32 $\mu$ A (fully enabled). It combines four op amps in a single package.

Microchip's op amps are internally compensated to be unity-gain stable and have a typical gain bandwidth product of 90kHz with typical slew rates of 35V/msec.

The amplifier's input range extends beyond both supplies by 200mV and the outputs will swing to within several millivolts of the supplies depending on the load current being driven.

Two shutdown mode pins are incorporated for easy adaptation to system power management schemes. In this state, the shutdown pins allow the user to power on one, two, three, or all four op amps (see Table 4-1). Pin **SHDNB** can be used to disable op amp B and pin **SHDNC/D** to disable op amps C and D. Op amp A is always powered on regardless of the states of the shutdown pins. When both shutdown pins are low, the total quiescent current of the TC1030 is only 6 $\mu$ A, typical.

Input offset voltage is 500 $\mu$ V max at 25°C with an input bias current of less than 100pA. This makes the TC1030 extremely suitable for precision, low power applications.

## 4.0 TYPICAL APPLICATIONS

The TC1030 lends itself to a wide variety of applications, particularly in battery-powered systems. It typically finds application in power management, process supervisory and interface circuitry.

### 4.1 Voice Band Receive Filter

The majority of spectral energy for human voices is found to be in a 2.7kHz frequency band from 300Hz to 3kHz. To properly recover a voice signal in applications such as radios, cellular phones and voice pagers a low-power bandpass filter that is matched to the human voice spectrum can be implemented using Microchip's CMOS op amps. Figure 4-1 shows a unity gain multi-pole Butterworth filter with ripple less than 0.15dB in the human voice band. The lower 3dB cut-off frequency is 70Hz (single order response) while the upper cut-off frequency is 3.5kHz (fourth order response).

### 4.2 Supervisory Audio Tone (SAT) Filter for Cellular

Supervisory Audio Tones (SAT) provide a reliable transmission path between cellular subscriber units and base stations. The SAT tone functions much like the current/voltage used in land line telephone systems to indicate that a phone is off the hook. The SAT tone may be one of three frequencies: 5970, 6000 or 6030Hz. A loss of SAT implies that channel conditions are impaired and if SAT is interrupted for more than 5 seconds a cellular call is terminated.

Figure 4-2 shows a high Q (30) second order SAT detection bandpass filter using Microchip's CMOS op amp architecture. This circuit nulls all frequencies except the three SAT tones of interest.

**TABLE 4-1: TC1030 SHUTDOWN POWER CONTROL LOGIC**

SHDNC/D	SHDNB	OP AMPS ENABLED	OP AMPS DISABLED	MAX. DEVICE SUPPLY CURRENT
V <sub>IL</sub>	V <sub>IL</sub>	A	B,C,D	10 $\mu$ A
V <sub>IL</sub>	V <sub>IH</sub>	A,B	C,D	16 $\mu$ A
V <sub>IH</sub>	V <sub>IL</sub>	A,C,D	B	24 $\mu$ A
V <sub>IH</sub>	V <sub>IH</sub>	A,B,C,D	None	32 $\mu$ A

NOTES:

## **Sales and Support**

### **Data Sheets**

Products supported by a preliminary Data Sheet may have an errata sheet describing minor operational differences and recommended workarounds. To determine if an errata sheet exists for a particular device, please contact one of the following:

1. Your local Microchip sales office
2. The Microchip Corporate Literature Center U.S. FAX: (480) 792-7277
3. The Microchip Worldwide Site ([www.microchip.com](http://www.microchip.com))

Please specify which device, revision of silicon and Data Sheet (include Literature #) you are using.

### **New Customer Notification System**

Register on our web site ([www.microchip.com/cn](http://www.microchip.com/cn)) to receive the most current information on our products.
