

PRECISION TEMPERATURE-TO-VOLTAGE CONVERTERS

FEATURES

- Linearized Temperature-to-Voltage Converters
- Direct Centigrade Output Voltage Scaling (TC03)
- Wide Temperature Measurement Range (TC02) - 20°C to +125°C
- Excellent Temperature Converter Linearity .. 0.8°C Over Temperature
- High Temperature Converter Accuracy ±2°C at 25°C Guaranteed
- Small Packages TO-92-3 and SOT-23B-3

APPLICATIONS

- Power Supply Thermal Shut-Down
- Temperature-Controlled Fans
- Temperature Measurement/Instrumentation
- Temperature Regulators
- Consumer Electronics

GENERAL DESCRIPTION

The TC02/03 temperature sensors furnish a linearized output voltage directly proportional to measured temperature. The TC03 has a temperature measurement range of - 20°C to +100°C. Its output voltage is directly calibrated in degrees Centigrade (i.e. $V_{OUT} = 10mV/^{\circ}C \times \text{Temperature } (^{\circ}C)$). An external pull-down resistor to a negative voltage source is required for temperature measurement below 0°C.

The TC02 has a temperature measurement range of - 20°C to +125°C, and operates with a single supply. It has the same output voltage slope with temperature as the TC03 (10mV/°C). The output voltage range is 300mV at - 20°C to 1,750mV at +125°C.

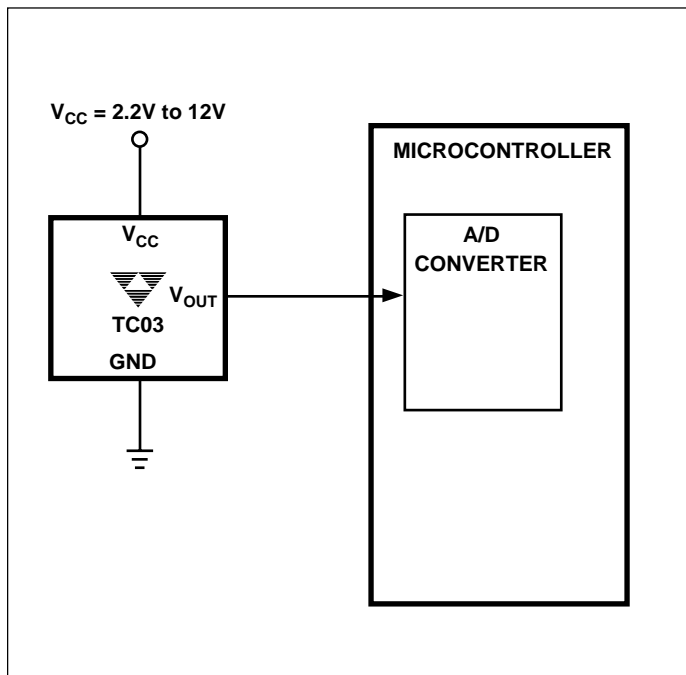

Small size, low cost and low power operation make the TC02/03 suitable for a wide range of general purpose temperature measurement applications.

* Static-sensitive device. Unused devices must be stored in conductive material. Protect devices from static discharge and static fields. Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to Absolute Maximum Rating Conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS : $T_A = -20^\circ\text{C}$ to $+125^\circ\text{C}$, $V_{CC} = 5V \pm 5\%$, unless otherwise specified.

- Notes:** 1. V_{OUT} outputs open circuited.
 2. Accuracy = Difference between calculated output voltage ($10\text{mV}/^\circ\text{C} \times \text{Device case temperature at specified temperature and power supply}$) and measured output voltage expressed in $^\circ\text{C}$.
 3. Nonlinearity = deviation of output voltage versus temperature from the best-fit straight line over the device rated temperature range.
 4. Guaranteed by design.

DETAILED DESCRIPTION

A plot of output voltage versus temperature for both the TC02 and TC03 appears in Figure 1. The TC03 can be used with single power supply to measure temperatures from 0°C to 100°C . A pull-down resistor (R_1 in Figure 2) must be added from V_{OUT} to the negative power supply for measuring temperatures less than 0°C . The value of the resistor must be chosen to limit the maximum current pulled from the output to the negative supply to $-50\mu\text{A}$ (i.e. $R_1 = V_{SS}/50\mu\text{A}$).

OUTPUT STAGE

Both the TC02 and TC03 have Class A output stages capable of sourcing 1mA. These devices have a limited ability to drive heavy capacitive loads. Loads of 50pF (to ground) can be driven directly. For heavier loads, a 2k Ω (or greater) resistor should be placed in series with the output for decoupling. If the TC02/03 is used in a noisy electrical environment, a 0.1 μF bypass capacitor from V_{CC} to GND is recommended.
