

## FEATURES/BENEFITS

- 5V tolerant inputs and outputs
- Bus Hold feature holds last active state during 3-state operation
- $10\mu A$   $I_{CCQ}$  quiescent power supply current
- Hot insertable
- 2.0V–3.6V  $V_{CC}$  supply operation
- $\pm 24mA$  balanced output drive
- Power down high impedance inputs and outputs
- $t_{PD} = 4.7ns$  max.
- Input hysteresis for noise immunity
- Meets or exceeds JEDEC Standard 36 specifications
- Multiple power and ground pins for low noise
- Operating temperature range:  
 $-40^{\circ}C$  to  $85^{\circ}C$
- Latch-up performance exceeds 500mA
- ESD performance:  
 Human body model > 2000V  
 Machine model > 200V
- Packages available:  
 56-pin TSSOP  
 56-pin SSOP

## DESCRIPTION

The LVCH16601A is an 18-bit registered bus transceiver with three-state outputs that are ideal for driving address and data buses. These high-speed, low-power registered transceivers combine D-type latches and D-type flip-flops to allow data flow in transparent, latched and clocked modes. The clocks can be controlled by the active-low clock-enable inputs. The QS74LVCH16601A provides Bus Hold circuitry on the data inputs to retain the last active state during 3-state operation, eliminating the need for external pull-up resistors. The 3.3V LVC family features low power, low switching noise, and fast switching speeds for low power portable applications as well as high-end advanced workstations applications. 5V tolerant inputs and outputs allow this LVC product to be used in mixed 5V and 3.3V applications. Easy board layout is facilitated by the use of flow-through pinouts and byte enable controls provide architectural flexibility for systems designers. To accommodate hot-plug or live insertion applications, both versions of this product were designed not to load an active bus when  $V_{CC}$  is removed. However, during power up or power down sequence,  $\overline{OE}$  should be tied to  $V_{CC}$  to ensure high-impedance state on the outputs.

| L       | L    | L    | ↑     | H  | H                |
| L       | L    | L    | L     | X  | B <sup>(2)</sup> |
| L       | L    | L    | H     | X  | B <sup>(3)</sup> |

**Notes:**

1. A-to-B data flow is shown. B-to-A data flow is similar but uses OEBA, LEBA, CLKBA and CLKENBA.
2. Output level before the indicated steady-state input conditions were established.
3. Output level before the indicated steady-state input conditions were established, provided that CLKAB was HIGH before LEAB went LOW.

**Table 3. Absolute Maximum Ratings**

|   |                          |
|---|--------------------------|
| Supply Voltage to Ground .....                          | -0.5V to 7.0V            |
| DC Output Voltage $V_{OUT}$                             |                          |
| Outputs HIGH-Z .....                                    | -0.5V to 7.0V            |
| Outputs Active .....                                    | -0.5V to $V_{CC} + 0.5V$ |
| DC Input Voltage $V_{IN}$ .....                         | -0.5V to 7.0V            |
| DC Input Diode Current with $V_{IN} < 0$ .....          | -50mA                    |
| DC Output Diode Current                                 |                          |
| $V_O < 0$ .....   | -50mA                    |
| $V_O > V_{CC}$ .....                                    | 50mA                     |
| DC Output Source/Sink Current ( $I_{OH}/I_{OL}$ ) ..... | $\pm 50mA$               |
| DC Supply Current per Supply Pin .....                  | $\pm 100mA$              |
| DC Ground Current per Ground Pin .....                  | $\pm 100mA$              |
| $T_{STG}$ Storage Temperature .....                     | -65°C to 150°C           |

**Note:** Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to this device resulting in functional or reliability type failures.

**Table 4. Recommended Operating Conditions**

| Symbol              | Parameter                           |                        | Min | Max      | Unit |

**Notes:**

1. Typical values are at  $V_{CC} = 3.3\text{V}$  and  $T_A = 25^\circ\text{C}$ .
2. These parameters are guaranteed by characterization, but not production tested.
3. Pins with Bus Hold are identified in the pin description.
4. An external driver must provide at least  $|I_{BH}|$  during transition to guarantee that the Bus Hold input will change state.
5. Per TTL driven input. All other inputs at  $V_{CC}$  or GND.

**Table 6. Dynamic Switching Characteristics**

| Symbol    | Parameter                            | Test Conditions  |   | Typ <sup>(1)</sup> | Unit        |

**Notes:**

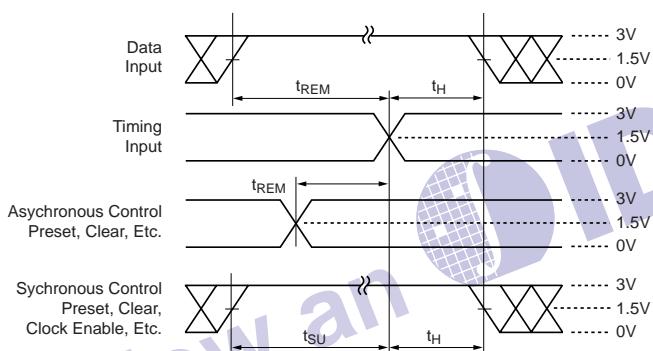

1. Minimums guaranteed but not tested. See Test Circuit and Waveforms.
2. Guaranteed by characterization.
3. Skew between any two outputs of the same package switching in the same direction. This parameter is guaranteed by characterization but not production tested.

## TEST CIRCUIT AND WAVEFORMS

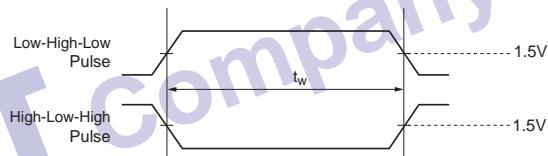

**Figure 3. Test Circuit**

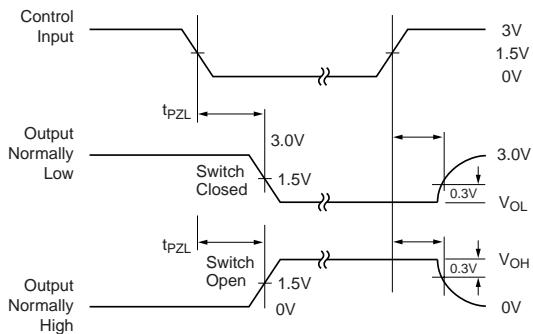

**Figure 4. Setup, Hold, and Release Timing**

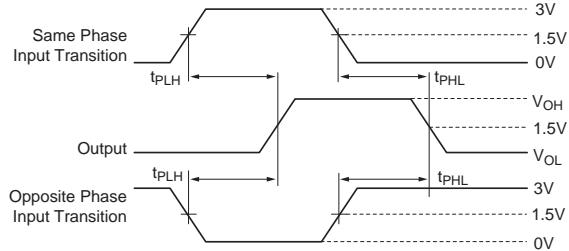

**Figure 6. Pulse Width**

**Figure 5. Enable and Disable Timing**

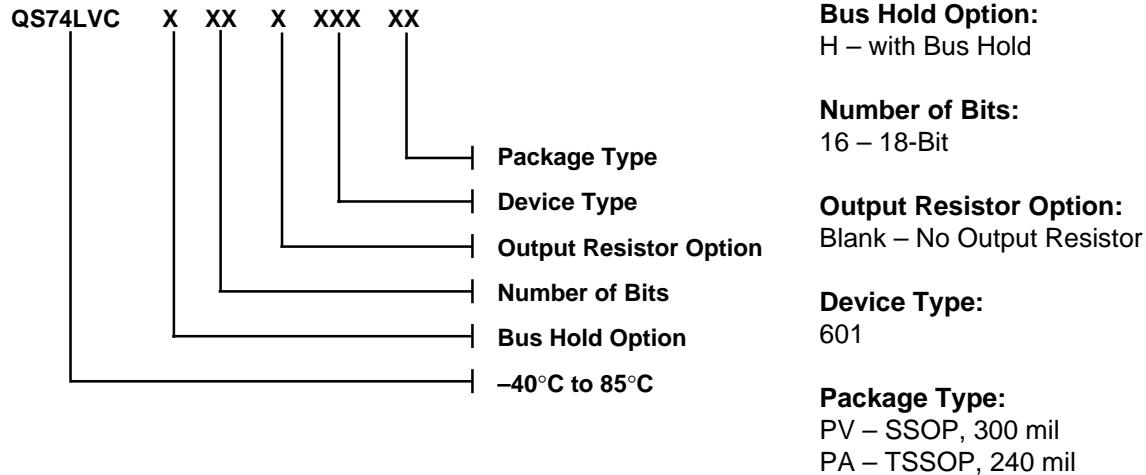

**Figure 7. Propagation Delay**

### Notes:

1. Input Control Enable = LOW and Input Control Disable = HIGH.
2. Pulse Generator for All Pulses: Rate  $\leq 1.0\text{MHz}$ ;  
 $Z_{OUT} \leq 50\Omega$ ;  $t_F, t_R \leq 2.5\text{ns}$ .
