

FEATURES/BENEFITS

- 5V tolerant inputs and outputs
- Bus Hold feature holds last active state during 3-state operation
- $10\mu A$ I_{CCQ} quiescent power supply current
- Hot insertable
- 2.0V–3.6V V_{CC} supply operation
- $\pm 24mA$ balanced output drive
- Power down high impedance inputs and outputs
- Input hysteresis for noise immunity
- Meets or exceeds JEDEC Standard 36 specifications
- Multiple power and ground pins for low noise
- Operating temperature range:
 $-40^{\circ}C$ to $85^{\circ}C$
- Latch-up performance exceeds 500mA
- ESD performance:
 Human body model > 2000V
 Machine model > 200V
- Packages available:
 20-pin QSOP
 20-pin SOIC
 20-pin TSSOP

DESCRIPTION

The LVCH245A is an 8-bit non-inverting transceiver that has three-state outputs which are useful for bus-oriented applications. The Transmit/Receive (T/R) input determines the direction of data flow, either from A to B or B to A, and the Output Enable (\overline{OE}) inputs enables the selected port for output. The 3.3V LVC family features low power, low switching noise, and fast switching speeds for low power portable applications as well as high-end, advanced workstation applications. 5V tolerant inputs and outputs allow this LVC product to be used in mixed-voltage applications. Active Bus Hold feature on LVCH245A retains last valid logic state at unused or floating data inputs, thus eliminating the need for external pull-up resistors. To accommodate hot-plug or live insertion applications, this product is designed not to load an active bus when V_{CC} is removed. However, during power up or power down sequence, \overline{OE} should be tied to V_{CC} to ensure high-impedance state on the outputs.
