

Features

- This Circuit is Processed in Accordance to MIL-STD-883 and is Fully Conformant Under the Provisions of Paragraph 1.2.1.
- High Slew Rate (HA-2500/883) 25V/μs (Min)
30V/μs (Typ)
- Wide Power Bandwidth (HA-2500/883) . . . 350kHz (Min)
- High Input Impedance (HA-2500/883) 25MΩ (Min)
50MΩ (Typ)
- Low Offset Current (HA-2500/883) 25nA (Max)
10nA (Typ)
- Low Quiescent Current 6mA (Max)
- Fast Settling Time (0.1% of 10V Step) 330ns (Typ)
- High Gain Bandwidth Product 12MHz (Typ)
- Internally Compensated For Unity Gain Stability

Applications

- Data Acquisition Systems
- RF Amplifiers
- Video Amplifiers
- Signal Generators
- Pulse Amplification

Description

HA-2500/883 and HA-2502/883 comprise a series of monolithic operational amplifiers whose designs are optimized to deliver excellent slew rate, bandwidth, and settling time specifications. The outstanding dynamic features of this internally compensated device are complemented with low offset voltage and offset current.

These dielectrically isolated amplifiers are ideally suited for applications such as data acquisition, RF, video, and pulse conditioning circuits. Guaranteed slew rates of ±25V/μs minimum (HA-2500/883) and ±20V/μs minimum (HA-2502/883) make these devices excellent components in fast, accurate data acquisition and pulse amplification designs. To insure compliance, all devices are 100% tested for AC performance characteristics over the full temperature limits.

A typical 12MHz gain bandwidth product and 500kHz full power bandwidth make these devices well suited to RF and video applications. With guaranteed offset voltages of 5mV (HA-2500/883) and 8mV (HA-2502/883) plus external offset adjust flexibility and low offset current, these amplifiers are particularly useful components in signal conditioning designs.

NOTES:

3. Parameters listed in Table 3 are controlled via design or process parameters and are not directly tested at final production. These parameters are lab characterized upon initial design release, or upon design changes. These parameters are guaranteed by characterization based upon data from multiple production runs which reflect lot to lot and within lot variation.
4. Full Power Bandwidth guarantee based on Slew Rate measurement using $FPBW = \text{Slew Rate} / (2\pi V_{PEAK})$.
5. Quiescent Power Consumption based upon Quiescent Supply Current test maximum. (No load on outputs.)
