

Radiation Hardened Octal D-Type Flip-Flop, Three-State, Positive Edge Triggered

Intersil's Satellite Applications Flow™ (SAF) devices are fully tested and guaranteed to 100kRAD total dose. These QML Class T devices are processed to a standard flow intended to meet the cost and shorter lead-time needs of large volume satellite manufacturers, while maintaining a high level of reliability.

The Intersil HCTS374T is a Radiation Hardened Non-Inverting Octal D-type, Positive Edge Triggered Flip-Flop with three-state outputs. The eight flip-flops enter data into their registers on the LOW-to-HIGH transition of the clock (CP). Data is also transferred to the outputs during this transition. The output enable (\overline{OE}) controls the three-state outputs and is independent of the register operation. When the output enable is high, the outputs are in the high impedance state.

Specifications

Specifications for Rad Hard QML devices are controlled by the Defense Supply Center in Columbus (DSCC). The SMD numbers listed below must be used when ordering.

Detailed Electrical Specifications for the HCTS374T are contained in SMD 5962-95748. A "hot-link" is provided from our website for downloading.
