DESCRIPTION

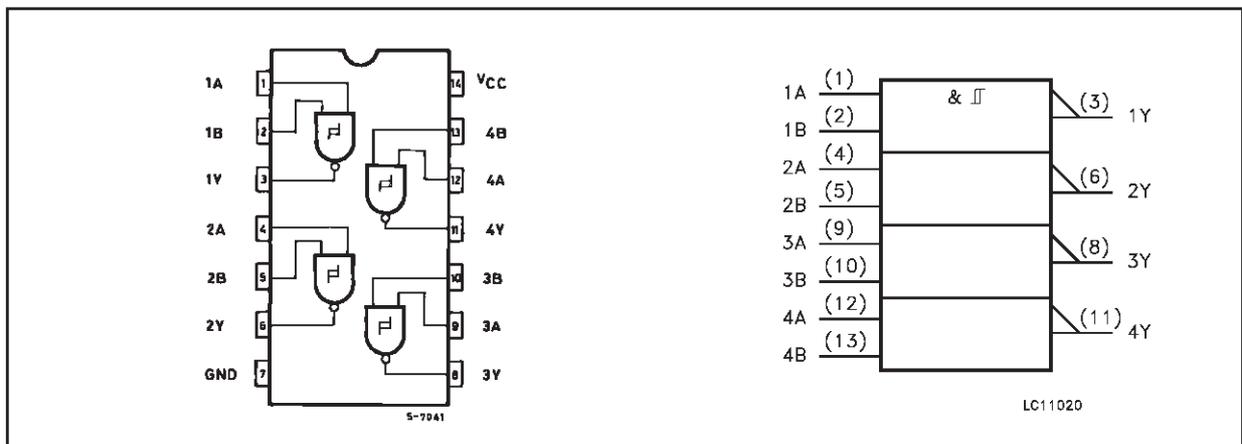

The M74HCT132 is an high speed CMOS QUAD 2-INPUT SCHMITT NAND GATE fabricated with silicon gate C²MOS technology.

Pin configuration and function are the same as those of the M74HCT00. The hysteresis characteristics (around 20% V_{CC}) of all inputs allow slowly changing input signals to be transformed into sharply defined jitter-free output signals.

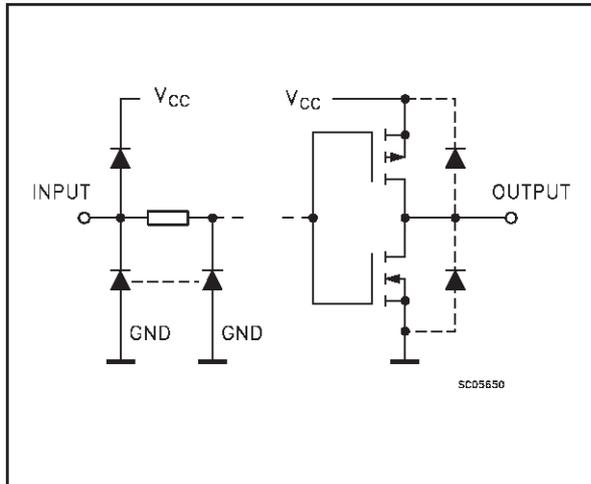

The M74HCT132 is designed to directly interface HSC²MOS systems with TTL and NMOS components.

All inputs are equipped with protection circuits against static discharge and transient excess voltage.
