DESCRIPTION

The GS70/100T300 family includes 70/100W DC-DC converters used to generate isolated output voltages with an output current up to 20A from a wide range input voltage (200 to 400Vdc). All the GS70/100T300 family modules require an external fuse (1 Amps.) on the input side.

CONNECTION DIAGRAM AND MECHANICAL DATA

Figure 1.

PIN DESCRIPTION

Pin	Function	Description
1	ENABLE	The converter is ON (Enable) when the voltage applied to this pin with reference to pin 2 is lower than 1.2V. The converter is OFF (Inhibit) for a control voltage in the range of 2.1 to 5V. When the pin is unconnected the converter is OFF (Inhibit).
2	- Vin	Negative input voltage.
3	+ Vin	Positive input voltage. Unregulated input voltage in the range of 200 to 400Vdc must be applied between pin 2-3.
4,5	+ Vo	+Vo output voltage.
6,7	- Vo	+Vo output voltage return.
8	+ SENSE	Senses the remote load high side. To be connected to pins 4,5 when remote sense is not used.
9	- SENSE	Senses the remote load return. To be connected to pins 6,7 when remote sense is not used.
10	ADJ	Adjust output voltage pin. A voltage generator between the ADJ. pin and -SENSE pin sets the Vo. When unconnected Vo is at nominal value (see fig. 2).

ADJUSTMENT OF THE OUTPUT VOLTAGE

The output voltage can be fixed following the indications given in fig. 2. The external reference voltage V_{adj} can be calculated using the following formula:

$$V_{adj} = 5 \cdot \frac{V_o}{V_{nom}}$$

The V_{out} and V_{adj} ranges are given in the following table:

Table 1: Output voltage generation with external voltage generator

Type	Nominal Output Voltage (V)	Output Voltage Range (V_{out})	External Voltage Generator allowed Range (V_{adj})
