

LOW DROP FIXED AND ADJUSTABLE POSITIVE VOLTAGE REGULATORS

PRELIMINARY DATA

- LOW DROPOUT VOLTAGE
(1.15V TYP @ $I_{OUT}=1.2A$, $25^{\circ}C$)
- VERY LOW QUIESCENT CURRENT
(5mA TYP @ $25^{\circ}C$)
- TYPE A: OUTPUT CURRENT UP TO 1000mA
- TYPE B: OUTPUT CURRENT UP TO 1200mA
- FIXED OUTPUT VOLTAGE OF: 1.8V, 2.5V,
2.85V, 3.3V, 5.0V
- ADJUSTABLE VERSION AVAILABILITY
($V_{ref}=1.25V$)
- INTERNAL CURRENT AND THERMAL LIMIT
- ONLY 10 μF FOR STABILITY
- AVAILABLE IN $\pm 2\%$ (AT $25^{\circ}C$) AND 4% IN
FULL TEMPERATURE RANGE
- HIGH SUPPLY VOLTAGE REJECTION :
(80dB TYP)
- TEMPERATURE RANGE : $0^{\circ}C$ TO $125^{\circ}C$

DESCRIPTION

The LD1117A and LD1117B are two LOW DROP Voltage Regulator able to provide respectively up to 1000mA and 1200mA of Output Current, available even in adjustable version ($V_{ref}=1.25V$). Concerning fixed versions, are offered the following Output Voltages: 1.8V, 2.5V, 2.85V, 3.3V and 5.0V. The 2.85V type is ideal for SCSI-2 lines active termination. The device is supplied in: SOT-223, DPAK. The

BLOCK DIAGRAM

SOT-223 and DPAK surface mount packages optimize the thermal characteristics even offering a relevant space saving effect. High efficiency is assured by NPN pass transistor. In fact in this case, unlike than PNP one, the Quiescent Current flows mostly into the load. Only a very common 10 μF minimum capacitor is needed for stability. The ADJUSTABLE LD1117 is pin to pin compatible with the other standard Adjustable voltage regulators maintaining the better performances in terms of Drop and Tolerance.

LD1117A/B SERIES

ABSOLUTE MAXIMUM RATINGS

Symbol	Parameter	Value	Unit
V_{IN}	DC Input Voltage	10	V
P_{tot}	Power Dissipation	12	W
T_{stg}	Storage Temperature Range	-40 to 150	°C
T_{op}	Operating Junction Temperature Range	0 to 125	°C

Absolute Maximum Ratings are those values beyond which damage to the device may occur. Functional operation under these conditions is not implied. Over the above suggested Max Power Dissipation a Short Circuit could definitively damage the device.

LD1117 ADJUSTABLE: APPLICATION NOTE

The LD1117 ADJUSTABLE has a thermal stabilized $1.25 \pm 0.012\text{V}$ reference voltage between the OUT and ADJ pins. I_{ADJ} is $60\mu\text{A}$ typ. ($120\mu\text{A}$ max.) and ΔI_{ADJ} is $1\mu\text{A}$ typ. ($5\mu\text{A}$ max.).

R_1 is normally fixed to 120Ω . From figure 7 we obtain:

$$V_{OUT} = V_{REF} + R_2 (I_{ADJ} + I_{R1}) = V_{REF} + R_2 (I_{ADJ} + V_{REF} / R_1) = V_{REF} (1 + R_2 / R_1) + R_2 \times I_{ADJ}.$$

In normal application R_2 value is in the range of few Kohm, so the $R_2 \times I_{ADJ}$ product could not be considered in the V_{OUT} calculation; then the above expression becomes:

$$V_{OUT} = V_{REF} (1 + R_2 / R_1).$$

In order to have the better load regulation it is important to realize a good Kelvin connection of R_1 and R_2 resistors. In particular R_1 connection must be realized very close to OUT and ADJ pin, while R_2 ground connection must be placed as near as possible to the negative Load pin. Ripple rejection can be improved by introducing a $10\mu\text{F}$ electrolytic capacitor placed in parallel to the R_2 resistor (see Fig.8)
