# **PC929**

## **Shortcircuit Protector Circuit Built-in Photocoupler Suitable** for Inverter-Driving MOS-FET/IGBT

\* TÜV (VDE 0884) approved type is also available as an option.

#### ■ Features

- 1. Built-in IGBT shortcircuit protector circuit
- 2. Built-in direct drive circuit for IGBT drive (Peak output current ... Io1P, Io2P: MAX, 0.4A)
- 3. High speed response ( $t_{PLH}$ ,  $t_{PHL}$ : MAX. 0.5  $\mu$  s)
- 4. High isolation voltage ( $V_{iso}$ :  $4000V_{rms}$ )
- 5. Half lead pin pitch (p=1.27 mm) package type
- 6. Recognized by UL, file NO. E64380

#### ■ Application

1. IGBT control for inverter drive

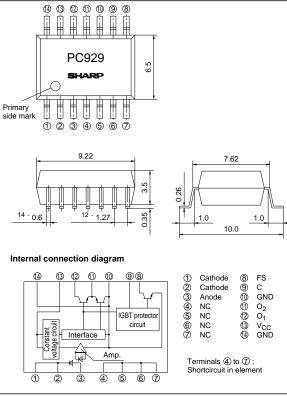

#### ■ Absolute Maximum Ratings

(Ta=Topr unless otherwise specified)

	Parameter	Symbol	Rating	Unit			
Input	*1 Forward current	$I_F$	20	mA			
	Reverse voltage	$V_R$	$6 (Ta = 25^{\circ}C)$	V			
Output	Supply voltage	Vcc	35	V			
	O <sub>1</sub> output current	I <sub>O1</sub>	0.1	A			
	*4 O <sub>1</sub> peak output current	I <sub>O1P</sub>	0.4	A			
	O2 output current	$I_{O2}$	0.1	A			
	*4 O2 peak output current	I <sub>O2P</sub>	0.4	A			
	O <sub>1</sub> output voltage	V <sub>O1</sub>	35	V			
	*2 Power dissipation	Po	500	mW			
	Overcurrent detecting voltage	Vc	$V_{CC}$	V			
	Overcurrent detecting current	Ic	30	mA			
	Error signal output voltage	V <sub>FS</sub>	$V_{CC}$	V			
	Error signal output current	$I_{FS}$	20	mA			
	*3 Total power dissipation	P <sub>tot</sub>	550	mW			
*5 Isolation voltage		Viso	4 000	Vrms			
Operating temperature		Topr	- 25 to + 80	°C			
Storage temperature		T <sub>stg</sub>	- 55 to + 125	°C			
	Soldering temperature	T <sub>sol</sub>	260 (for 10 sec)	°C			

<sup>\*1, 2, 3</sup> Decrease in the ambient temperature range of the Absolute Max. Rating: Shown in Figs 1 and 2.

#### ■ Outline Dimensions (Unit: mm)

<sup>\* &</sup>quot;OPIC" (Optical IC) is a trademark of the SHARP Corporation. An OPIC consists of a light-detecting element and signal processing circuit integrated onto a single chip.

Operation truth table is shown on the next page.

Pulse width <= 0.15 µs, Duty ratio=0.01

<sup>40</sup> to 60% RH, AC for 1 minute, Ta=25°C

## **■** Electro-optical Characteristics (1)

(Ta=Topr unless otherwise specified)

Parameter		Symbol	Conditions	MIN.	TYP.	MAX.	Unit	Measuring circuit

<sup>\*9</sup> When measuring overcurrent, protective output and error signal output characteristics, connect a bypass capacitor  $(0.01\,\mu\,\text{F}\,\text{or}\,\text{more})$  between  $V_{CC}$  (3) and GND (4) near the device. \*10  $V_{CTH}$  represents C-terminal voltage when  $O_2$  output goes from "High" to "Low".

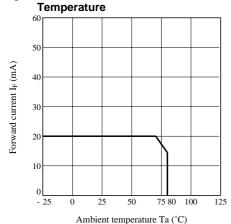

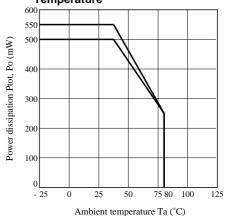

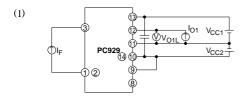

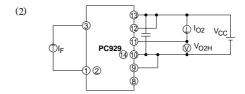

Fig. 2 Power Dissipation vs. Ambient Temperature

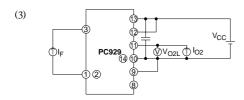

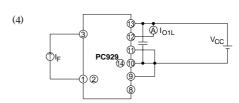

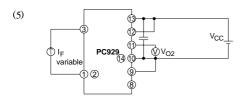

#### **■** Test Circuit Diagram

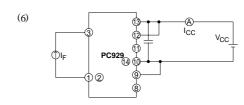

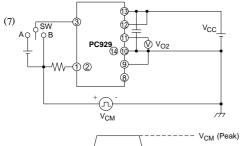

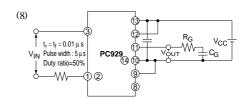

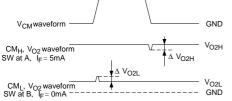

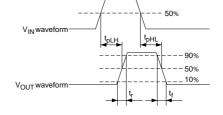

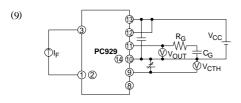

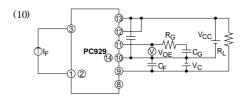

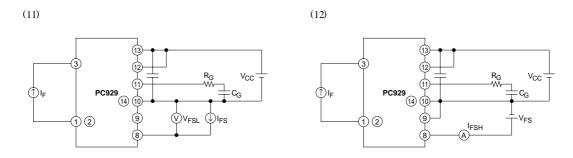

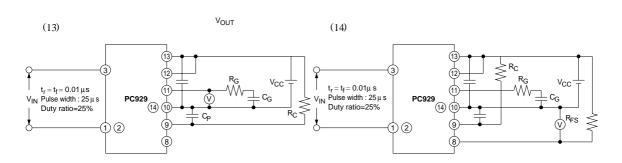

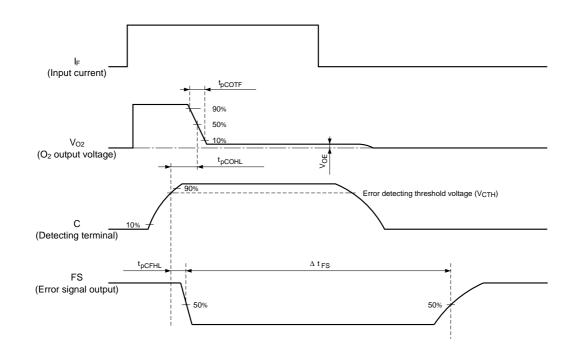

### **■ Test Circuit Diagram**

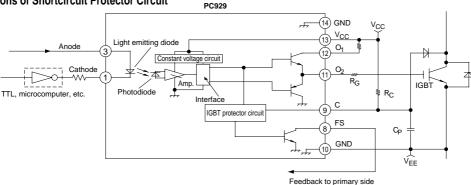

Operations of Shortcircuit Protector Circuit

- 1. Detection of increase in V<sub>CE</sub> (sat) of IGBT due to overcurrent by means of C-terminal ① terminal)
- 2. Reduction of the IGBT gate voltage, and suppression of the collector current.
- 3. Simultaneous output of signals to indicate the shortcircuit condition (FS signal) from FS terminal to the microcomputer
- 4. Judgement and processing by the microcomputer 

  In the case of instantaneous shortcircuit, run continues.

  At fault, input to the photocoupler is cut off, and IGBT is turned OFF.

#### **Precautions for Operation**

- 1. It is recommended that a capacitor of about 1000pF is added between C-terminal and GND in order to prevent malfunction of C-terminal due to noise. In the case of capacitor added, rise of the detecting voltage is delayed. Thus, use together a resistance of about  $1k\Omega$  set between  $V_{CC}$  and C-terminal.
- The C-terminal rise time varies with the time constant of CR added. Check sufficiently before use.
- 2. The light-detecting element used for this product is provided with a parasitic diode between each terminal and GND. When a terminal happens to reach electric potential lower than GND potential even in a moment, malfunction or rupture may result. Design the circuit so that each terminal will be kept at electric potential lower than the GND potential at all times.

#### **NOTICE**

- •The circuit application examples in this publication are provided to explain representative applications of SHARP devices and are not intended to guarantee any circuit design or license any intellectual property rights. SHARP takes no responsibility for any problems related to any intellectual property right of a third party resulting from the use of SHARP's devices.
- •Contact SHARP in order to obtain the latest device specification sheets before using any SHARP device. SHARP reserves the right to make changes in the specifications, characteristics, data, materials, structure, and other contents described herein at any time without notice in order to improve design or reliability. Manufacturing locations are also subject to change without notice.
- Observe the following points when using any devices in this publication. SHARP takes no responsibility for damage caused by improper use of the devices which does not meet the conditions and absolute maximum ratings to be used specified in the relevant specification sheet nor meet the following conditions:
  - (i) The devices in this publication are designed for use in general electronic equipment designs such as:
  - Personal computers
  - Office automation equipment
  - Telecommunication equipment [terminal]
- Test and measurement equipment
- Industrial control
- Audio visual equipment
- Consumer electronics
- (ii) Measures such as fail-safe function and redundant design should be taken to ensure reliability and safety when SHARP devices are used for or in connection with equipment that requires higher reliability such as:
- Transportation control and safety equipment (i.e., aircraft, trains, automobiles, etc.)
- Traffic signals
- Gas leakage sensor breakers
- Alarm equipment
- Various safety devices, etc.
- (iii) SHARP devices shall not be used for or in connection with equipment that requires an extremely high level of reliability and safety such as:
- Space applications
- Telecommunication equipment [trunk lines]
- Nuclear power control equipment
- Medical and other life support equipment (e.g., scuba).
- •Contact a SHARP representative in advance when intending to use SHARP devices for any "specific" applications other than those recommended by SHARP or when it is unclear which category mentioned above controls the intended use.
- •If the SHARP devices listed in this publication fall within the scope of strategic products described in the Foreign Exchange and Foreign Trade Control Law of Japan, it is necessary to obtain approval to export such SHARP devices.
- •This publication is the proprietary product of SHARP and is copyrighted, with all rights reserved. Under the copyright laws, no part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, for any purpose, in whole or in part, without the express written permission of SHARP. Express written permission is also required before any use of this publication may be made by a third party.
- Contact and consult with a SHARP representative if there are any questions about the contents of this
  publication.
