

# LD29080 SERIES

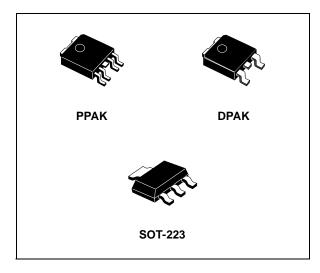

# 800mA FIXED AND ADJUSTABLE OUTPUT VERY LOW DROP VOLTAGE REGULATOR

#### **PRELIMINARY DATA**

- VERY LOW DROPOUT VOLTAGE (TYP. 0.4V AT 800mA)
- GUARANTEED OUTPUT CURRENT UP TO 800mA
- FIXED AND ADJUSTABLE OUTPUT VOLTAGE (±1% AT 25°C)
- INTERNAL CURRENT AND THERMAL LIMIT
- LOGIC CONTROLLED ELECTRONIC SHUTDOWN

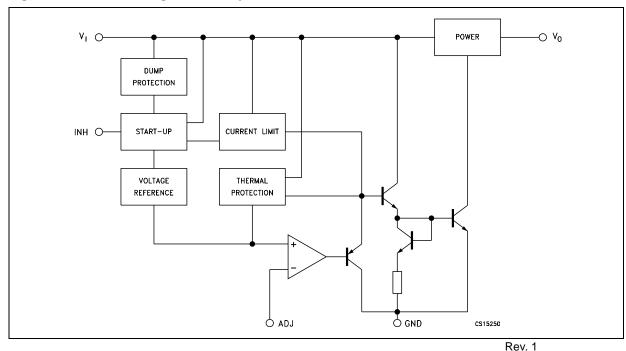

#### **DESCRIPTION**

The LD29080 is a high current, high accuracy, low-dropout voltage regulators series. These regulators feature 400mV dropout voltages and very low ground current. Designed for high current loads, these devices also find applications in lower current, extremely low dropout-critical systems, where their tiny dropout voltage and ground current values are important attributes. Typical application are in Power supply switching post

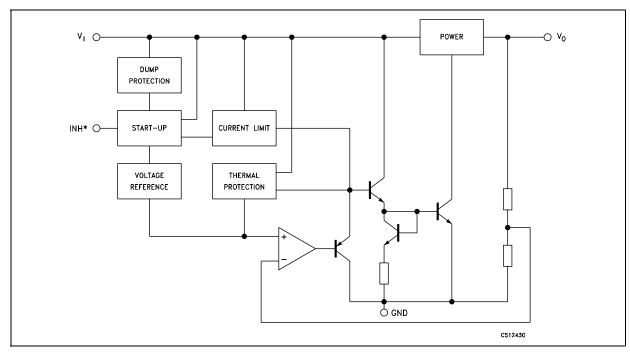

regulation, Series power supply for monitors, Series power supply for VCRs and TVs, Computer Systems and Battery powered systems.

NOTE 1: Guaranteed by design. NOTE 2: Dropout voltage is defined as the input-to-output differential when the output voltage drops to 99% of its nominal value with  $V_O+1V$ 

NOTE 2. Disposit voltage is defined as the input-to-output differential when the output voltage grops to 99% of its normal value with V<sub>O</sub>+1V applied to V<sub>I</sub>.

NOTE 3: Reference Voltage is measured between output and GND pins, with ADJ PIN tied to V<sub>OUT</sub>.

NOTE 4: in order to avoid any output voltage rise within the whole operating temperature range, due to output leakage current, a minimum load current of 2mA is required.
