TOSHIBA CMOS Digital Integrated Circuit Silicon Monolithic

TC74LCX16244FT

Low-Voltage 16-Bit Bus Buffer with 5-V Tolerant Inputs and Outputs

The TC74LCX16244FT is a high-performance CMOS 16-bit bus buffer. Designed for use in 2.5-V or 3.3-V systems, it achieves high-speed operation while maintaining the CMOS low power dissipation.

The device is designed for low-voltage (2.5-V or 3.3-V) V_{CC} applications, but it could be used to interface to 5 V supply environment for both inputs and outputs.

This device is non-inverting 3-state buffer having four active-low output enables. It can be used as four 4-bit buffers two 8-bit buffers or one 16-bit buffer. When the \overline{OE} input is high, the outputs are in a high-impedance state. This device is designed to be used with 3-state memory address drivers, etc.

All inputs are equipped with protection circuits against static discharge.

Features

- Low-voltage operation: V_{CC} = 2.0 to 3.6 V
- High-speed operation: $t_{pd} = 4.5 \text{ ns} (max) (V_{CC} = 3.0 \text{ to } 3.6 \text{ V})$
- Output current: |IOH|/IOL = 24 mA (min) (VCC = 3.0 V)
- Latch-up performance: ±500 mA
- Package: TSSOP (thin shrink small outline package)
- Power-down protection provided on all inputs and outputs

Maximum Ratings

| Characteristics | Symbol | Rating | Unit |
|---|-----------------------------------|--|------|
| Power supply voltage | V _{CC} | -0.5 to 6.0 | V |
| Input voltage | V _{IN} | -0.5 to 7.0 | V |
| Output voltage | V _{OUT} | -0.5 to 7.0 (Note 1) | V |
| Output voltage | VOUT | -0.5 to V _{CC} + 0.5 (Note 2) | v |
| Input diode current | I _{IK} | -50 | mA |
| Output diode current | I _{OK} | ±50 (Note 3) | mA |
| DC output current | IOUT | ±50 | mA |
| Power dissipation | PD | 400 | mW |
| DC V _{CC} /ground current per supply pin | I _{CC} /I _{GND} | ±100 | mA |
| Storage temperature | T _{stg} | -65 to 150 | °C |

Note 1: Output in OFF state

Note 2: High or low state. $I_{\mbox{OUT}}$ absolute maximum rating must be observed.

Note 3: $V_{OUT} < GND, V_{OUT} > V_{CC}$

Recommended Operating Conditions

| Characteristics | Symbol | Rating | Unit |
|--------------------------|----------------------------------|-------------------------------|------|
| Power supply voltage | V _{CC} | 2.0 to 3.6 | V |
| Tower supply voltage | vcc | 1.5 to 3.6 (Note 4) | v |
| Input voltage | V _{IN} | 0 to 5.5 | V |
| | Vour | 0 to 5.5 (Note 5) | V |
| Output voltage | Vout | 0 to V _{CC} (Note 6) | v |
| | I _{OH} /I _{OL} | ±24 (Note 7) | |
| Output current | | ±12 (Note 8) | mA |
| | | ±8 (Note 9) | |
| Operating temperature | T _{opr} | -40 to 85 | °C |
| Input rise and fall time | dt/dv | 0 to 10 (Note 10) | ns/V |

Note 4: Data retention only

Note 5: Output in OFF state

Note 6: High or low state

Note 7: $V_{CC} = 3.0$ to 3.6 V

Note 8: $V_{CC} = 2.7$ to 3.0 V

Note 9: $V_{CC} = 2.3$ to 2.7 V

Note 10: $V_{IN} = 0.8$ to 2.0 V, $V_{CC} = 3.0$ V

Capacitive Characteristics (Ta = 25°C)

| Characteristics | Symbol | Test Condition | V _{CC} (V) | Тур. | Unit |
|-------------------------------|------------------|-----------------------------------|---------------------|------|------|
| Input capacitance | C _{IN} | | 3.3 | 7 | pF |
| Output capacitance | C _{OUT} | _ | 3.3 | 8 | pF |
| Power dissipation capacitance | C _{PD} | $f_{IN} = 10 \text{ MHz}$ (Note 1 | 2) 3.3 | 25 | pF |

Note 12: C_{PD} is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation:

 $I_{CC (opr)} = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC}/16$ (per bit)

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
 In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
