

CMOS 8-Bit Microcomputer

**TMP87CH48U / DF**

TMP87CH48 is a low power, high-speed and high-performance 8-bit single chip microcomputer, including large capacity ROM/RAM, input/output ports, a multiple timer counter, serial interfaces (UART, I<sup>2</sup>C-bus, and SIO), four 12-bit PWM outputs, a 10-bit A/D converter and two oscillators.

| Part No.    | ROM       | RAM       | Package            | OTP         |
|-------------|-----------|-----------|--------------------|-------------|
| TMP87CH48U  | 16 Kbytes | 512 bytes | P-LQFP64-1010-0.50 | TMP87PH48U  |
| TMP87CH48DF |           |           | P-QFP64-1414-0.80A | TMP87PH48DF |

**Features**

- ◆ 8-bit single chip microcomputer TLCS-870 series
- ◆ Minimum instruction execution time: 0.5  $\mu$ s (at 8 MHz), 122  $\mu$ s (at 32.768 kHz)
- ◆ 412 basic machine instructions: 129 types
- ◆ 15 interrupt sources (External: 6, Internal: 9)
  - All sources have independent latches each, and nested interrupt control is available.
  - Edge-selectable external interrupts with noise reject.
  - High-speed task switching by register bank changeover
- ◆ Input/output ports (56 pins)
  - High current output: 8 pins (typ.20 mA), LED direct drive
- ◆ 16-bit timer counters: 2 channels
  - Timer, Event counter, PPG (Programmable Pulse Generator) output, Pulse width measurement, External trigger timer, Window modes
- ◆ 8-bit timer counters: 2 channels
  - Timer, Event counter, Capture (Pulse width/duty measurement) PWM (Changeable pulse width) output, PDO (Programmable Divider Output)
- ◆ Time base timer (Interrupt frequency: 1 to 16384 Hz)
- ◆ Divider output functions (Frequency: 1 to 8 kHz)
- ◆ Watchdog timer
  - Interrupt/Reset output (programmable)
- ◆ D/A conversion (changeable pulse width) output
  - 12-bit resolution: 4 channels
- ◆ UART: 1 channel (parity-framing-overrun error detection)
- ◆ Serial bus interface (SBI-ver. B)
  - 1 channel (I<sup>2</sup>C bus or clock synchronous SIO)
- ◆ 10-bit successive approximation type A/D converter
  - Analog input: 16 channels
  - Conversion time: 24.5  $\mu$ s or 98  $\mu$ s (at 8 MHz)

980910EBP1

- For a discussion of how the reliability of microcontrollers can be predicted, please refer to Section 1.3 of the chapter entitled Quality and Reliability Assurance / Handling Precautions.
- TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.

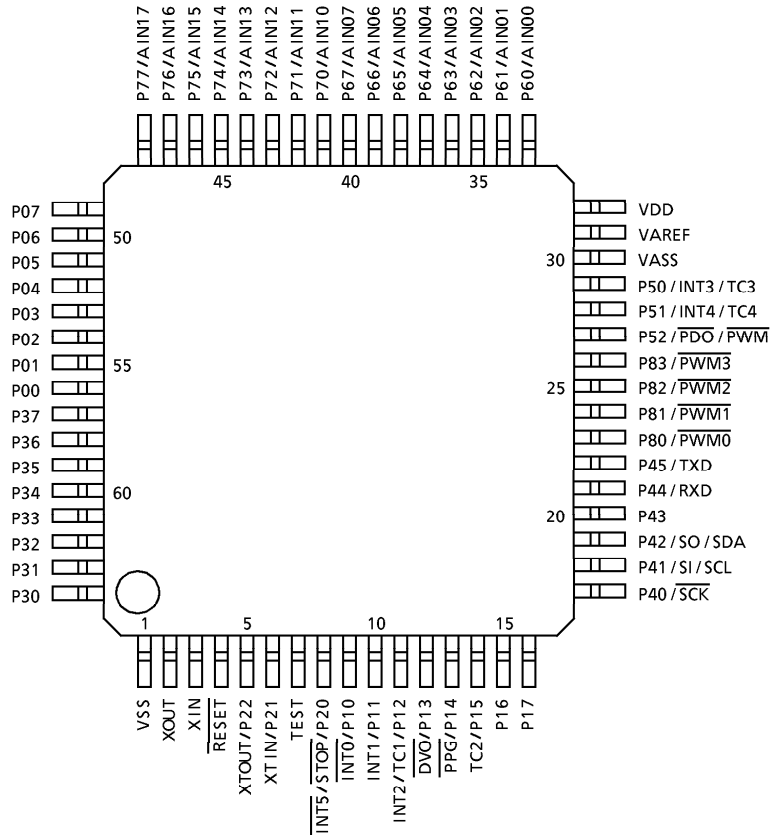

Purchase of TOSHIBA I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

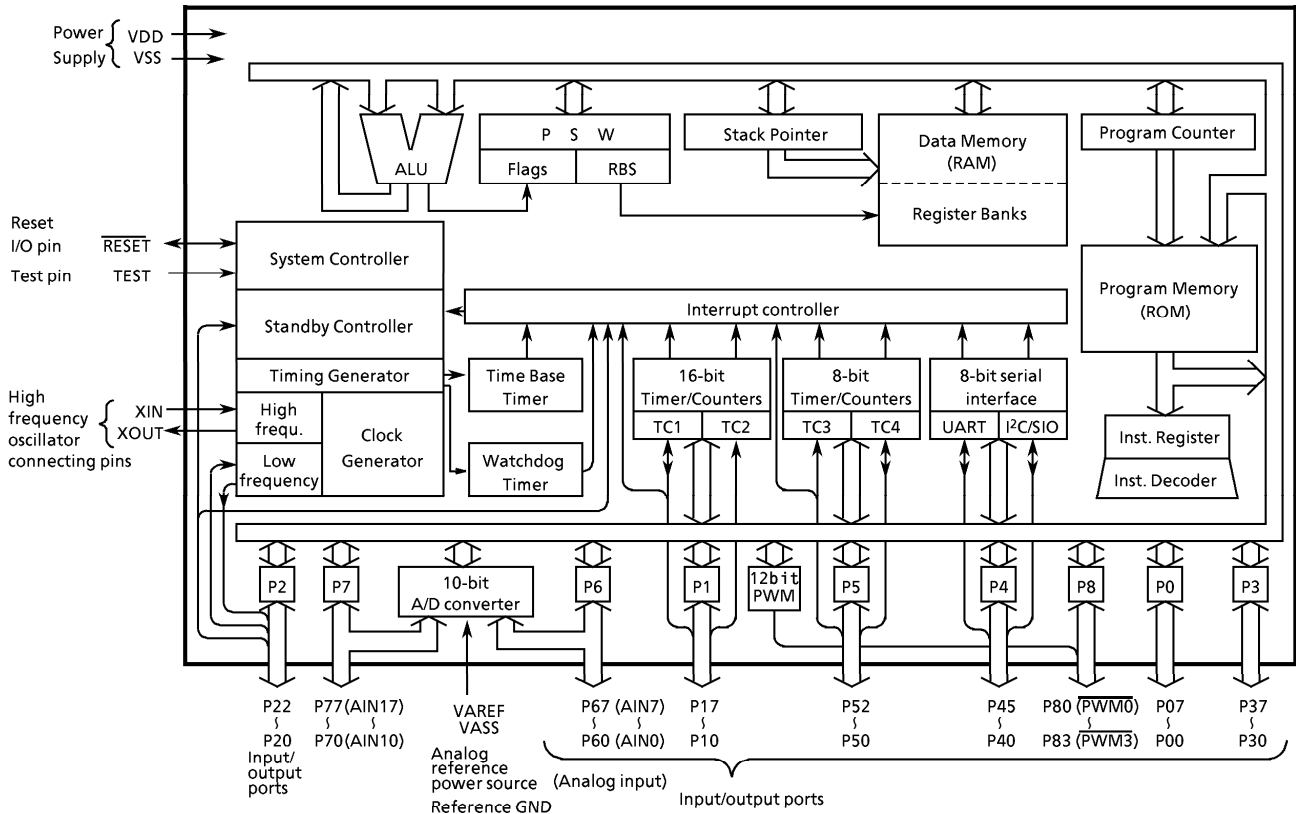

- ◆ Clock oscillation circuit: Two circuits
  - Single/Dual clock modes (Initial mode is always set to a single clock mode.)
- ◆ Low consumption power (Five modes)
  - STOP mode: Oscillation stop (Battery/Capacitor back-up). Port output hold/high-impedance.
  - SLOW mode: Low consumption power operation by low-frequency clock
  - IDEL1 mode: CPU stops, and only peripheral hardware operates using high-frequency clock. Release by interrupts (CPU restarts).
  - IDEL2 mode: CPU stops, and only peripheral hardware operates using high or low-frequency clock). Release by interrupts.
  - SLEEP mode: CPU stops, and only peripheral hardware operates using low-frequency clock. Release by interrupts.
- ◆ Operation voltage: 2.7 to 5.5 V at 4.2 MHz / 32.768 kHz, 4.5 to 5.5 V at 8 MHz / 32.768 kHz
- ◆ Emulation pod: BM87CH48U0A

Block Diagram

## Pin Function

| Pin Name   | Input / Output    | Functions  |  |
|--|-------------------|--|--|
| P07 to P00   | I/O               |  |  |
| P17, P16   | I/O               | 8-bit programmable input/output port (tri-state).<br>Each bit of these ports can be individually configured as an input or an output under software control. When used as an external interrupt input or a timer counter input, the latch must be set to input mode. When used as PPG output or a divider output, the output latch must be set to "1". |  |
| P15 (TC2)  | I/O (Input)       |  | Timer counter 2 input  |
| P14 (PPG)  | I/O (Output)      |  | Programmable pulse generator output  |
| P13 (DVO)  |                   |  | Divider output   |
| P12 (INT2 / TC1)                                       | I/O (Input)       |  | External interrupt input 2 or Timer counter 1 input  |
| P11 (INT1)   |                   |  | External interrupt input 1   |
| P10 (INT0)   |                   |  | External interrupt input 0   |
| P22 (XTOUT)  | I/O (Output)      |  | 3-bit input/output port. When used as an input port, an oscillator connecting pin, an external interrupt input or STOP mode release input of P20, the output latch must be set to "1". |
| P21 (XTIN)   | I/O (Input)       | External interrupt input 5 or STOP mode release signal input   |  |
| P20 (INT5 / STOP)                                      |                   |  |  |
| P37 to P30   | I/O               | 8-bit input/output port (high current output). When used as an input port, the output latch must be set to "1".  |  |
| P45 (TxD)  | I/O (Output)      | 8-bit input/output port.<br>When used as an input port, a serial interface pin, the output latch must be set to "1".   | UART serial data output (send)   |
| P44 (RxD)  | I/O (Input)       |  | UART serial data output (receive)  |
| P43  | I/O               |  |  |
| P42 (SO / SDA)   | I/O (Output, I/O) |  | SIO serial data output or I <sup>2</sup> C bus data input/output   |
| P41 (SI / SCL)   | I/O (Input, I/O)  |  | SIO serial data output or I <sup>2</sup> C bus clock input/output  |
| P40 (SCK)  | I/O (I/O)         |  | SIO serial clock input/output  |
|  | I/O               |  |  |
| P52 (PWM / PDO)  | I/O (Output)      | 3-bit input/output port. When used as an input port, PWM output, high-speed PWM output, a programmable divider output, an external interrupt input or timer counter input, the output latch must be set to "1".  | 8-bit PWM output or 8-bit programmable divider output  |
| P51 (INT4 / TC4)                                       | I/O (Input)       |  | External interrupt input 4 or Timer counter 4 input  |
| P50 (INT3 / TC3)                                       |                   |  | External interrupt input 3 or Timer counter 3 input  |
| P67 (AIN7) to P60 (AIN0)<br>P77 (AIN17) to P70 (AIN10) | I/O               | 8-bit programmable input/output port (tri-state). Each bit of these ports can be individually configured as an input or an output under software control. When used as an analog input, the latch must be set to an analog input mode by P6CR and P7CR.)   | A/D converter analog input   |
| P83 (PWM3) to P80 (PWM0)                               | I/O (Output)      | 4-bit programmable input/output port (tri-state). Each bit of the port can be individually configured as an input or an output under software control. An input or an output is determined by setting P8CR.  | DA conversion (PWM) output (PWM3 to PWM0)  |
| XIN, XOUT  | Input, Output     | Oscillator connecting pins for high frequency clock. For inputting external clock, XIN is used and XOUT is opened.   |  |
| RESET  | I/O               | Reset signal input or watchdog timer output/address-trap-reset output/system-clock-reset output.   |  |
| TEST   | Input             | Test pin for outgoing test. Be externally tied to low.   |  |
| VDD, VSS   | Power Supply      | + 5 V, 0 V (GND)   |  |
| VAREF, VASS  |                   | A/D conversion analog reference voltage, Reference GND.  |  |

OPERATIONAL DESCRIPTION

1. CPU CORE FUNCTIONS

The CPU core consists of a CPU, a system clock controller, an interrupt controller, and a watchdog timer. This section provides a description of the CPU core, the program memory (ROM), the data memory (RAM), and the reset circuit.

1.1 Memory Address Map

The TLCS-870 Series is capable of addressing 64K bytes of memory. Figure 1-1 shows the memory address maps of the 87CH48. In the TLCS-870 Series, the memory is organized 4 address spaces (ROM, RAM, SFR, and DBR). It uses a memory mapped I/O system, and all I/O registers are mapped in the SFR/DBR address spaces. There are 16 banks of general-purpose registers. The register banks are also assigned to the first 128 bytes of the RAM address space.

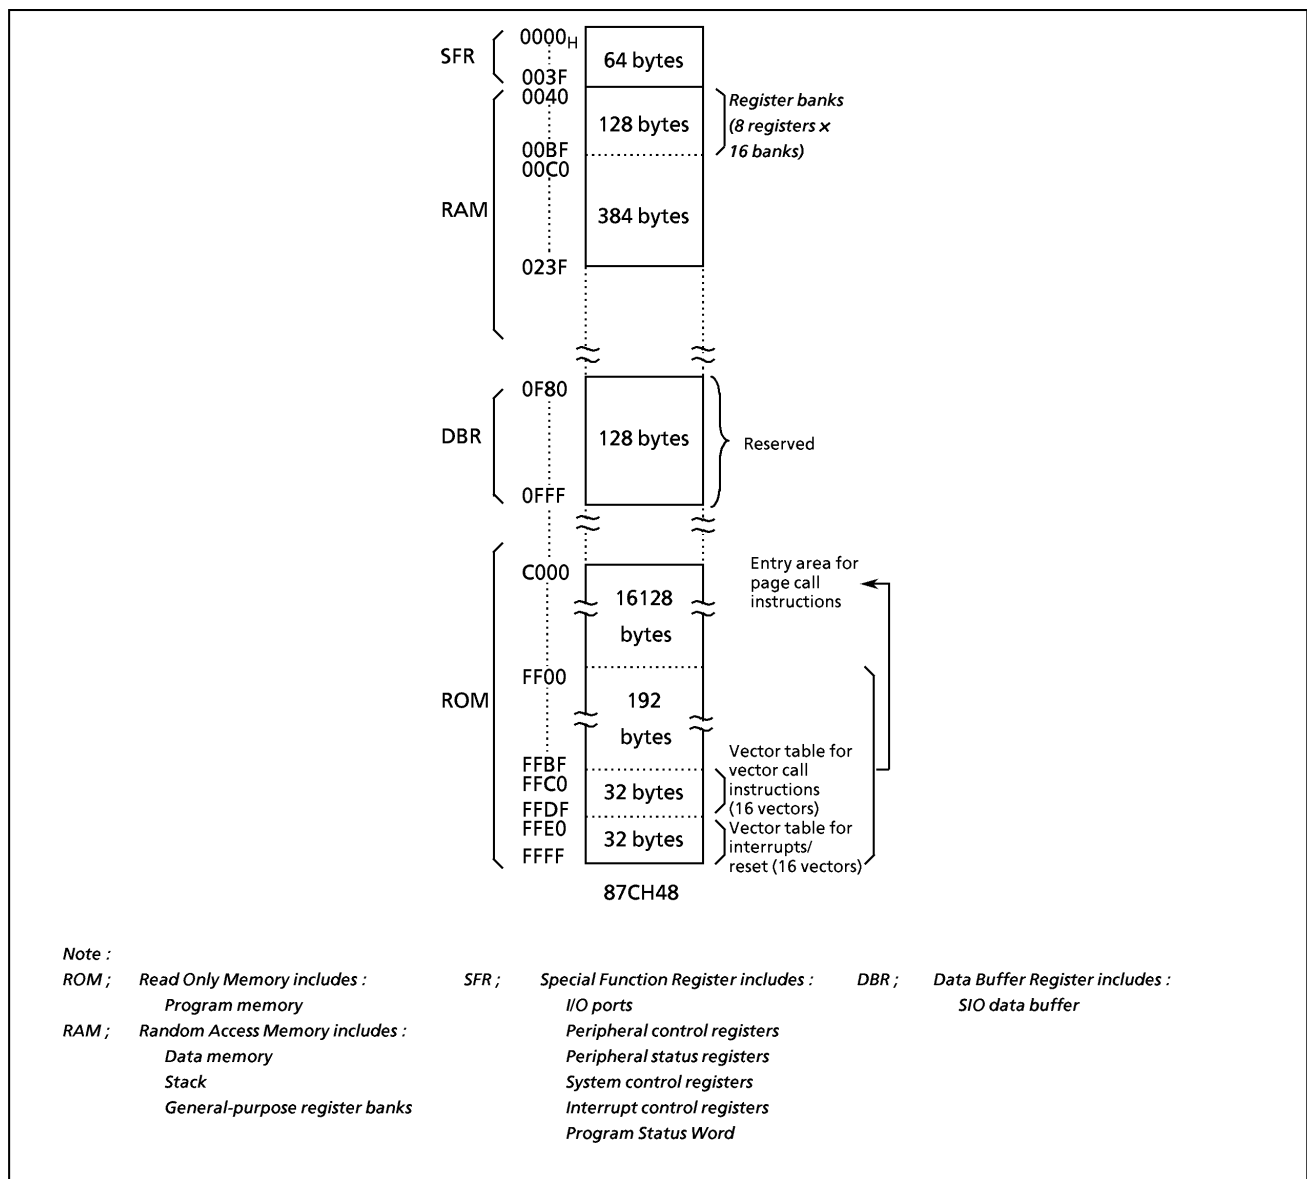

Figure 1-1. Memory Address Maps

## Electrical Characteristics

## Absolute Maximum Ratings

(V<sub>SS</sub> = 0 V)

| Parameter                    | Symbol              | Conditions                           | Ratings                        | Unit |
|------------------------------|---------------------|--------------------------------------|--------------------------------|------|
| Supply Voltage               | V <sub>DD</sub>     |                                      | - 0.3 to 6.5                   | V    |
| Input Voltage                | V <sub>IN</sub>     |                                      | - 0.3 to V <sub>DD</sub> + 0.3 | V    |
| Output Voltage               | V <sub>OUT</sub>    |                                      | - 0.3 to V <sub>DD</sub> + 0.3 | V    |
| Output Current (Per 1 pin)   | I <sub>OUT1</sub>   | Ports P0, P1, P2, P4, P5, P6, P7, P8 | 3.2                            | mA   |
|                              | I <sub>OUT2</sub>   | Port P3                              | 30                             |      |
| Output Current (Total)       | Σ I <sub>OUT1</sub> | Ports P0, P1, P2, P4, P5, P6, P7, P8 | 120                            | mA   |
|                              | Σ I <sub>OUT2</sub> | Port P3                              | 120                            |      |
| Power Dissipation            | PD                  |                                      | 350                            | mW   |
| Soldering Temperature (time) | T <sub>sld</sub>    |                                      | 260 (10 s)                     | °C   |
| Storage Temperature          | T <sub>stg</sub>    |                                      | - 55 to 125                    | °C   |
| Operating Temperature        | T <sub>opr</sub>    |                                      | - 30 to 70                     | °C   |

*Note: The absolute maximum ratings are rated values which must not be exceeded during operation, even for an instant. Any one of the ratings must not be exceeded. If any absolute maximum rating is exceeded, a device may break down or its performance may be degraded, causing it to catch fire or explode resulting in injury to the user. Thus, when designing products which include this device, ensure that no absolute maximum rating value will ever be exceeded.*

## Recommended Operating Conditions

(V<sub>SS</sub> = 0 V, T<sub>opr</sub> = - 40 to 85°C)

| Parameter          | Symbol            | Pins                    | Conditions                     | Min                     | Max                     | Unit |                        |
|--------------------|-------------------|-------------------------|--------------------------------|-------------------------|-------------------------|------|------------------------|
| Supply Voltage     | * V <sub>DD</sub> |                         | f <sub>c</sub> = 8 MHz         | NORMAL1, 2 mode         | 4.5                     | 5.5  | V                      |
|                    |                   |                         |                                | IDLE1, 2 mode           |                         |      |                        |

|                    |                   |                         |                                | IDLE1, 2 mode           |                         |      |                        |
|                    |                   |                         | f <sub>s</sub> = 32.768 kHz    | SLOW mode               | 2.0                     |      |                        |
| SLEEP mode         |                   |                         |                                |                         |                         |      |                        |
| Input High Voltage | V <sub>IH1</sub>  | Except hysteresis input | V <sub>DD</sub> ≥ 4.5 V        | V <sub>DD</sub> × 0.70  | V <sub>DD</sub>         | V    |                        |
|                    | V <sub>IH2</sub>  | Hysteresis input        |                                | V <sub>DD</sub> × 0.75  |                         |      |                        |
|                    | V <sub>IH3</sub>  |                         |                                | V <sub>DD</sub> < 4.5 V |                         |      | V <sub>DD</sub> × 0.90 |
| Input Low Voltage  | V <sub>IL1</sub>  | Except hysteresis input | V <sub>DD</sub> ≥ 4.5 V        | 0                       | V <sub>DD</sub> × 0.30  | V    |                        |
|                    | V <sub>IL2</sub>  | Hysteresis input        |                                |                         | V <sub>DD</sub> × 0.25  |      |                        |
|                    | V <sub>IL3</sub>  |                         |                                |                         | V <sub>DD</sub> < 4.5 V |      | V <sub>DD</sub> × 0.10 |
| Clock Frequency    | f <sub>c</sub>    | XIN, XOUT               | V <sub>DD</sub> = 4.5 to 5.5 V | 0.4                     | 8.0                     | MHz  |                        |
|                    |                   |                         | V <sub>DD</sub> = 2.7 to 5.5 V |                         | 4.2                     |      |                        |
|                    | f <sub>s</sub>    | XTIN, XTOUT             |                                | 30.0                    | 34.0                    | kHz  |                        |

*Note: The recommended operating conditions for a device are operating conditions under which it can be guaranteed that the device will operate as specified. If the device is used under operating conditions other than the recommended operating conditions (supply voltage, operating temperature range, specified AC/DC values etc.), malfunction may occur. Thus, when designing products which include this device, ensure that the recommended operating conditions for the device are always adhered to.*
