TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

# TC9090AN, TC9090AF

## MULTICOLOR SYSTEM VERSION

## 3-LINE DIGITAL Y / C SEPARATION IC

The TC9090AN and TC9090AF separate luminance (Y) and chrominance (C) signals from a multicolor system composite video signal. It employs the Toshiba logical comb filter to realize high performance Y/C separation at low cost.

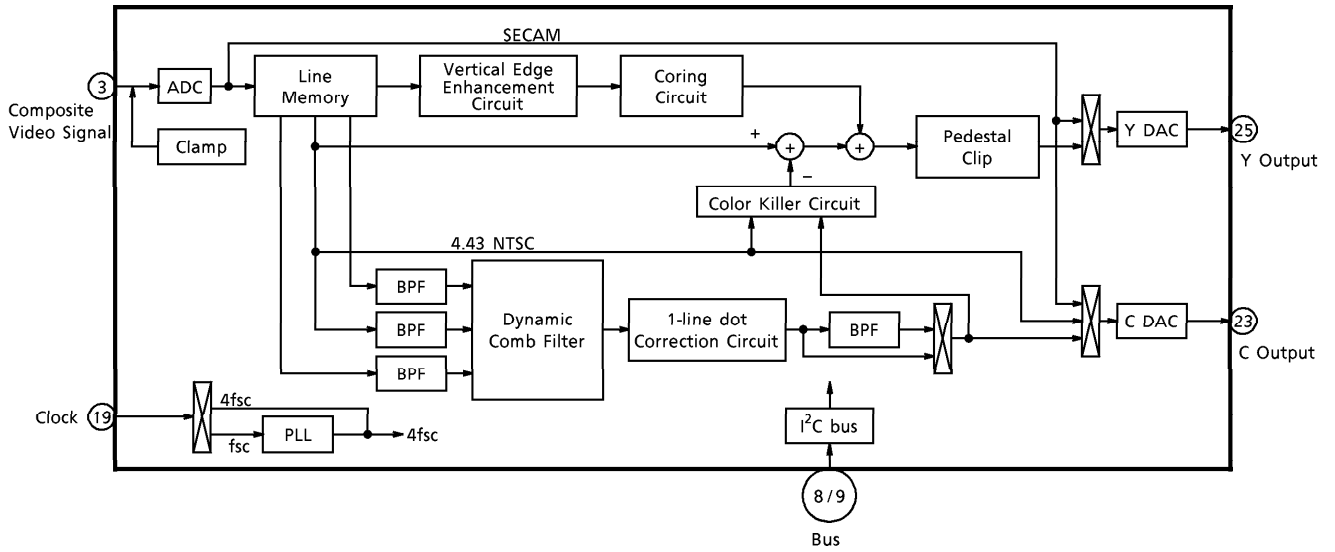

### FEATURES

- TV systems : NTSC, PAL, N-PAL, M-PAL, 4.43NTSC
- PLL 4× multiplication circuit
- Sync tip clamping circuit
- Internal 8bit A/D converter
- Internal 8bit D/A converters (2ch)
- 4H line memories
- Dynamic comb filter
- 1-line dot interference correction circuit
- Vertical edge enhancement circuit
- Color killer mode (Y/C separation OFF)
- Chroma output band width selectable
- I<sup>2</sup>C bus control
- SDIP28/SOP28 package
- 5V single power supply

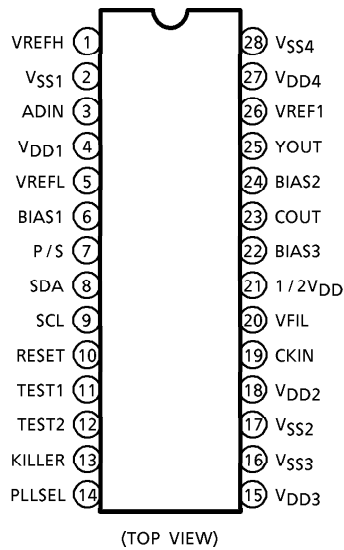

Weight  
 SDIP28-P-400-1.78 : 1.7g (Typ.)  
 SOP28-P-450-1.27 : 0.8g (Typ.)

| PIN No. | PIN NAME           | FUNCTION                                                                                                                       | I/O | INTERFACE CIRCUIT                                                                     |
|---------|--------------------|--------------------------------------------------------------------------------------------------------------------------------|-----|---------------------------------------------------------------------------------------|
| 21      | 1/2V <sub>DD</sub> | Bias for line memory. This pin requires 2.5V external bias.                                                                    | I   |    |
| 22      | BIAS3              | Bias for DAC. This defaults internally to 3.5V, so this pin should normally be connected to ground through a 0.01μF capacitor. | —   |    |
| 23      | COUT               | Chrominance signal output.                                                                                                     | O   |   |
| 24      | BIAS2              | Bias for DAC. This defaults internally to 1.6V, so this pin should normally be connected to ground through a 0.01μF capacitor. | I   |  |
| 25      | YOUT               | Luminance signal output.                                                                                                       | O   |  |
| 26      | VREF1              | DAC bias lower-limit reference voltage for. This pin requires 3.0V external bias.                                              | —   |  |
| 27      | V <sub>DD4</sub>   | DAC power supply (+5V).                                                                                                        | —   | —                                                                                     |
| 28      | V <sub>SS4</sub>   | DAC ground.                                                                                                                    | —   | —                                                                                     |

**FUNCTION BLOCK DESCRIPTIONS**

1. Input clamp (CLAMP)  
This block performs sync tip clamping of the composite video signal. It provides a feedback signal for clamping A/D-converted minimum data at Y/C separation to the internal DC bias level.
2. A/D converter (ADC)  
This block comprises a high-speed series-parallel 8-bit A/D converter that accepts an input video signal of 1.5V<sub>p-p</sub> (from sync level to 100% white level).
3. Line memory  
This block consists of DRAM resident line memory for 1H delay. There are four pairs. The line memories are combined to produce a 3-line composite video signal for each TV system type.

1H delay of the line memory

| TV SYSTEM     | 3.58NTSC | PAL   | N-PAL | M-PAL | 4.43NTSC |
|---------------|----------|-------|-------|-------|----------|
| Delay (clock) | 910      | 1,135 | 917   | 909   | —        |

4. Band-pass filter (BPF)  
In this block, with fsc as the center frequency of the BPF, the chrominance signal is extracted from the line-memory-delayed composite video signal. The same logic is used for NTSC, PAL, M-PAL and N-PAL input signals, but the characteristics differ since each TV system uses a different fsc and system clock. Since the BPF for the chrominance signal output can be controlled (ON or OFF), the chrominance output can therefore be switched between a narrow band width and a wide band width. This can be controlled by the I<sup>2</sup>C bus only in I<sup>2</sup>C bus control mode. In pin control mode, the chrominance output is set to a fixed wide band width. Separate BPF logic is used for the 4.43NTSC system type.

5. Dynamic comb filter (DCF)

This block comprises a band-pass filter that extracts the vertical component of the chrominance signal. Using Toshiba original logic, a correlation of the three lines is sought for. The absence of correlation is taken as an indication of a luminance signal, at which time chrominance signal output is suppressed.

6. Vertical edge enhancement circuit (VENH)

This block enhances the uncorrelated components among the three lines of the luminance signal following coring. The luminance signal, obtained by subtracting the chrominance signal from the composite video signal, is added to the vertical edge enhancement component and output through the D/A converter. However, this output signal is limited to the pedestal level (fixed internally) by the pedestal clipping circuit (except for the sync tip level). Eight levels of enhancement (0dB to 1.94dB) can be selected by I<sup>2</sup>C bus control and four levels of enhancement (0dB to 1.49dB) can be selected by pin control. This block can be used with any of the TV system types except SECAM.

(i) Input signal with edge component

(ii) Output signal

$$\text{Enhance level} = 20 \log \frac{a+b}{a} \text{ (dB)}$$

Vertical edge enhancement characteristic

Vertical edge enhancement characteristic (Zoom)

The relation between a and b.

- a : The difference of the luminance level in part of the edge.
- b : The component of vertical edge enhancement which is add to the luminance signal.

Both are expressed by digital value.

(However, this graph only shows adjustable enhance value of the device pin.)

— (A) Enhance Value : 1.49dB

- - - (D) Enhance value : 1.49dB

..... (B) 1.02dB

..... (C) 0.53dB

- . - . (E) 1.02dB

- . - . (F) 0.53dB

A, B, C : Coring = OFF D, E, F : Coring = ON

**7. 1-line dot interference correction**

Previously, a 1-line-only chrominance signal was processed as a luminance signal resulting in dot crawl. This circuit prevents this problem by extracting the 1-line dot component and adding it to the DCF output. This function is used with the NTSC system only, and can be set ON or OFF under I<sup>2</sup>C bus control. Under pin control, it is always ON.

(i) Input signal

(ii) 1-line circuit output : OFF

(iii) 1-line circuit output : ON

**8. PLL (4x clock signal multiplier)**

This block supplies a 4fsc (PLL 4x multiplied) signal for use as system clock. An fsc or 4fsc input clock is selectable under I<sup>2</sup>C bus control. Under pin control, the external clock signal is used, bypassing the PLL circuit.

**9. Clock and memory timing generator (RTIM)**

This block supplies a buffered system clock signal to the other circuit blocks, and also generates a timing signal for the memory blocks.

**10. D/A converter (DAC)**

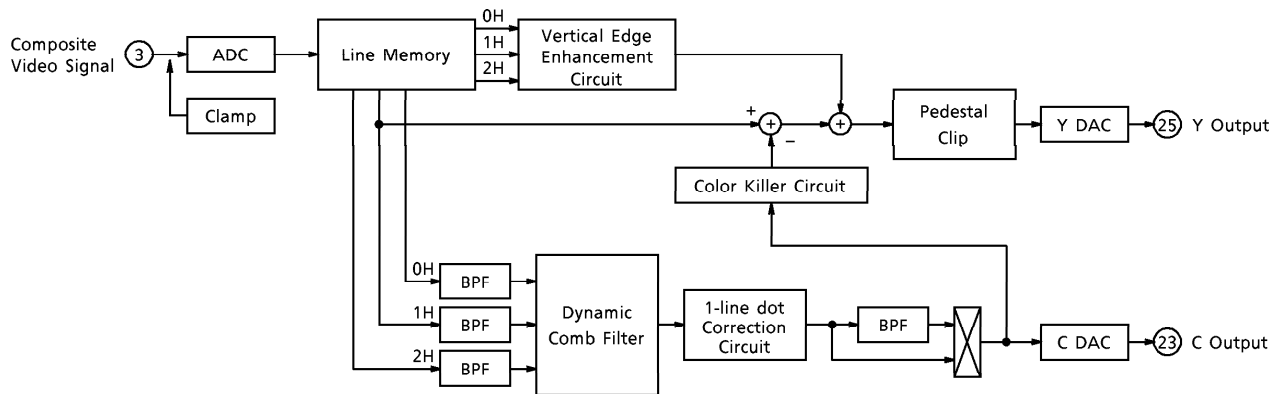

This block comprises a high-speed 8bit D/A converter. It provides Y output at approximately 2.0V<sub>p-p</sub> and burst-level C output at approximately 572mV<sub>p-p</sub>.

**SIGNAL FLOW**

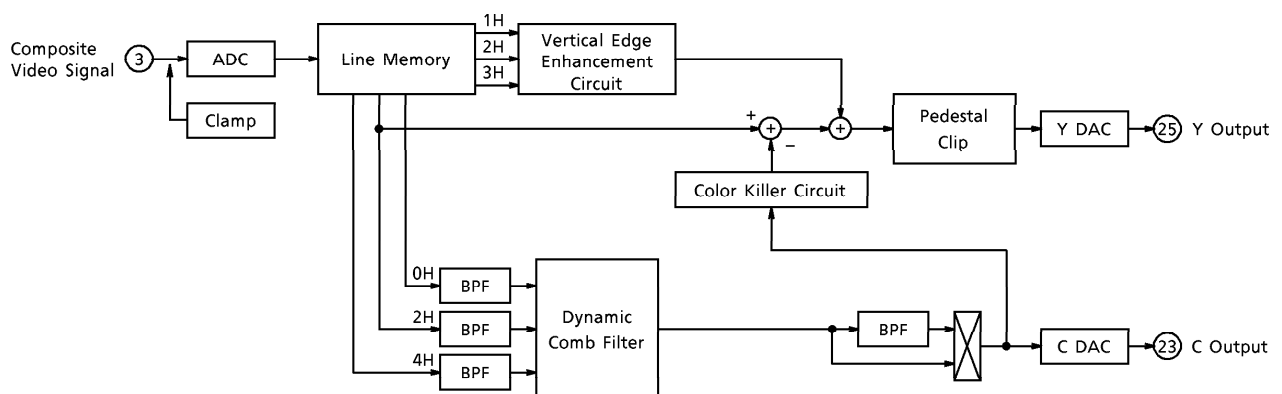

- Signal processing

| TV SYSTEM | METHOD OF Y / C SEPARATION    | VENH CIRCUIT | 1-LINE DOT CORRECTION CIRCUIT |
|-----------|-------------------------------|--------------|-------------------------------|
| NTSC      | 3-line (0H, 1H, 2H)           | ○ (± 1H)     | ○                             |
| PAL       | 3-line (0H, 2H, 4H)           | ○ (± 1H)     | —                             |

**FUNCTION CONTROL**

There are two ways to control TC9090AN and TC9090AF functions : through the I<sup>2</sup>C bus or through the device pins. The method used is selected with function control selector switch P/S (pin 7).

● **Function table**

| FUNCTION                     | SYMBOL | CONTROL          |      | MODE                                                                                      |
|------------------------------|--------|------------------|------|-------------------------------------------------------------------------------------------|
|                              |        | I <sup>2</sup> C | PIN  |                                                                                           |
| TV System Selector           | TVSW   | ○                | ○    | NTSC, PAL, N-PAL, M-PAL 4.43NTSC, SECAM                                                   |
| VENH Level Selector          | VENH   | ○                | ○    | I <sup>2</sup> C bus control : 8 steps (0dB~1.94dB)<br>Pin control : 4 steps (0dB~1.49dB) |
| Color Killer Switch          | KILLER | ○                | ○    | Color, B/W                                                                                |
| Coring Switch                | CORING | ○                | ON   | Coring circuit on, off                                                                    |
| 1-Line Dot Correction Switch | 1LINE  | ○                | ON   | 1-line dot correction circuit on, off                                                     |
| Chroma Band-Width Selector   | CBPF   | ○                | Wide | Wide band width, narrow band width                                                        |
| PLL Selector                 | PLLSEL | ○                | ○    | fsc input, 4fsc input (PLL off)                                                           |

For KILLER and PLLSEL, pin control is also possible even in I<sup>2</sup>C bus control. When you set to "1" or "H" in either control, however, these settings have priority.

Example :

I<sup>2</sup>C bus : 1 Pin : L → I<sup>2</sup>C bus : 1 has priority.

I<sup>2</sup>C bus : 0 Pin : H → Pin : H has priority.

**I<sup>2</sup>C BUS CONTROLLED FORMAT SUMMARY**

Bus controlled format of TC9090AN and TC9090AF are based on I<sup>2</sup>C bus control format of Philips.

**Data transfer format**

**(1) Start and stop condition**

**(2) Bit transfer**

**(3) Acknowledge**

**(4) Slave address**

| A6 | A5 | A4 | A3 | A2 | A1 | A0 | R / $\bar{W}$ |
|----|----|----|----|----|----|----|---------------|
| 1  | 0  | 1  | 1  | 0  | 0  | 1  | 0             |

Purchase of TOSHIBA I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.

**I<sup>2</sup>C BUS CONTROL DATA REGISTERS**

Value in tables are default initialization values.

**DATA1**

|       |       |       |       |       |       |      |        |
|-------|-------|-------|-------|-------|-------|------|--------|
| MSB   |       |       |       |       |       |      | LSB    |
| TVSW1 | TVSW2 | TVSW3 | VENH0 | VENH1 | VENH2 | CBPF | KILLER |
| 0     | 0     | 0     | 0     | 0     | 0     | 0    | 0      |

TVSW1~3 : Selects the TV system.

- 000 = TEST (not used)
- 001 = M-PAL
- 010 = N-PAL
- 011 = PAL
- 100 = 4.43NTSC
- 101 = SECAM
- 110 = 3.58NTSC

VENH0~2 : Sets level of vertical edge enhancement.

- 000 = 0dB
- 001 = 0.27dB
- 010 = 0.53dB
- 011 = 0.78dB
- 100 = 1.02dB
- 101 = 1.26dB
- 110 = 1.49dB
- 111 = 1.94dB

CBPF : Selects the chroma output band width by switching on or off the BPF that follows DCF.

- 0 = Wide band width
- 1 = Narrow band width

KILLER : Switches color killer circuit.

- 0 = Color mode (color killer circuit OFF)
- 1 = B/W mode (color killer circuit ON)

**DATA2**

|               |             |             |  |  |  |  |     |
|---------------|-------------|-------------|--|--|--|--|-----|

APPLICATION CIRCUIT

(Note) About PCB design :

To reduce input/output signal noise, isolate the analog, digital and PLL circuits from one another.

**PACKAGE DIMENSIONS**  
SDIP28-P-400-1.78

Unit : mm

Weight : 1.7g (Typ.)

**PACKAGE DIMENSIONS**  
SOP28-P-450-1.27

Unit : mm

Weight : 0.8g (Typ.)

**RESTRICTIONS ON PRODUCT USE**

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA CORPORATION for any infringements of intellectual property or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any intellectual property or other rights of TOSHIBA CORPORATION or others.
- The information contained herein is subject to change without notice.
