

CMOS Area Image Sensor

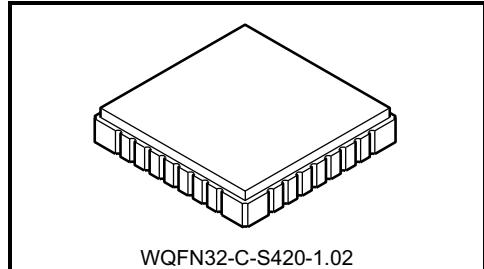

TCM5033T

**1/4-inch 330 K-Pixel CMOS Color-Image Sensor
with Built-in ADC for VGA**

The TCM5033T is a CMOS color-image sensor with a built-in ADC for VGA. It outputs a signal for each pixel in sequence every 1/30 s. (This is known as progressive scanning.)

This element is equipped with 492 vertical and 660 horizontal signal pixels, and the image size conforms to the 1/4-inch optical format.

Use of the CMOS process enables low power-consumption using a single power supply voltage. The device also provides excellent color reproduction due to the use of a primary color filter, and is perfect for use as an image input device for mobile equipment, digital cameras and other of multimedia devices.

WQFN32-C-S420-1.02

Weight: 0.54 g (typ.)

Features

- Optical size: 1/4-inch optical format
- Total number of pixels: 698 (H) × 502 (V)
- Number of signal pixels: 660 (H) × 492 (V)
- Pixel pitch: 5.6 µm (H) × 5.6 µm (V) (square pixel)
- Image size: 3.696 mm (H) × 2.755 mm (V)
- Package: 32-pin CLCC
- Color filter: Primary color filter, Bayer arrangement (G checked, R/B line in sequence)
- Frame frequency: 30 Hz
- Power supply voltage: 2.8 V
- Additional functions: Variable speed electronic shutter (1/30 s~1/8000 s)
 - Gain control amplifier
 - Internal feedback clamp circuit
 - Built-in sync. signal generator

Maximum Ratings (Ta = 25°C)

Characteristics	Symbol	Rating	Unit
Power supply voltage	V _{DD}	-0.5~4.2	V
Input voltage	V _{IN}	-0.3~V _{DD} + 0.3	V
Storage temperature	T _{stg}	-30~85	°C

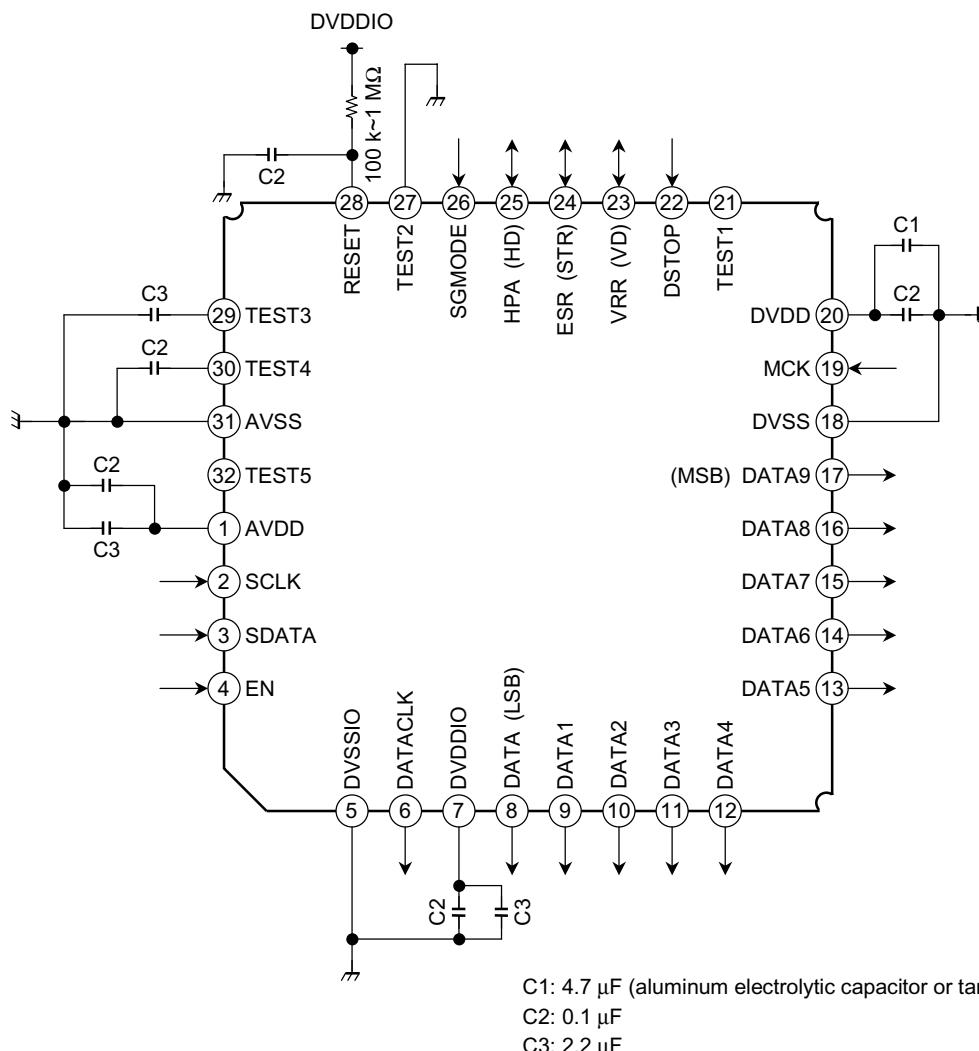

000707EBA2

- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
- In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.

Recommended Operating Conditions

Characteristics	Symbol	Min	Typ.	Max	Unit	
Power supply voltage	V _{AVDD}	2.6	2.8	3.0	V	
	V _{DVDD}	2.6	2.8	3.0		
	V _{DVDDIO}	2.3	2.8	3.6		
Input voltage	V _{IN}	0~V _{DVDDIO}		V		
Operating temperature	T _{opr}	-20~60		°C		

Pin Connection (top view) and Application Circuit

Recommended output impedance of DVDD supply circuit: less than 0.5 Ω at 10 kHz

Block Diagram

The SGMODE pin can be used to select either internal or external synchronization.

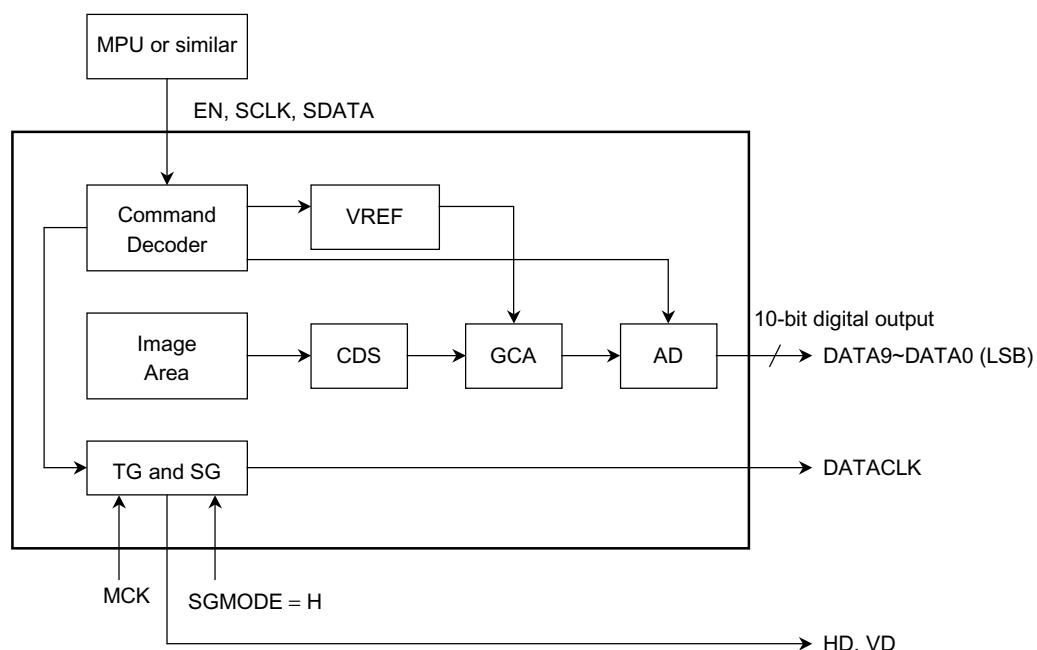

The SGMODE pin is pulled down. When the SGMODE pin is open, External Synchronization Mode is selected. When the SGMODE pin is High, Internal Synchronization Mode is selected.

In External Synchronization Mode, the HPA and VRR sync. signals and the electronic shutter signal are input from an external source. In Internal Synchronization Mode, HD and VD sync. signals are output and the value of the electronic shutter signal must be set using a command.

(i) External Synchronization Mode

(ii) Internal Synchronization Mode

Pin Configuration

Pin No.	Symbol	I/O	Function
1	AVDD	—	Analog power supply. $V_{DD} = 2.8 \text{ V} \pm 0.2 \text{ V}$
2	SCLK	I	Serial clock input for commands
3	SDATA	I	Serial data input for commands
4	EN	I	Data enable input for commands
5	DVSSIO	—	Digital I/O VSS
6	DATACLK	O	Data clock output (half of master clock)
7	DVDDIO	—	Digital I/O power supply
8	DATA0	I/O	AD output (LSB)
9	DATA1	I/O	AD output
10	DATA2	I/O	AD output
11	DATA3	I/O	AD output
12	DATA4	I/O	AD output
13	DATA5	I/O	AD output
14	DATA6	I/O	AD output
15	DATA7	I/O	AD output
16	DATA8	I/O	AD output
17	DATA9	I/O	AD output (MSB)
18	DVSS	—	Digital VSS
19	MCK	I	Master clock input
20	DVDD	—	Digital power supply. $2.8 \text{ V} \pm 0.2 \text{ V}$
21	TEST1	—	TEST terminal 1
22	DSTOP	I	Read stop control input H: Active L: Read stop
23	VRR (VD)	I/O	Vertical timing start pulse input/VD pulse output
24	ESR	I	Electrical shutter start pulse input
25	HPA (HD)	I/O	Horizontal timing start pulse input/HD pulse output
26	SGMODE	I	Internal/External sync select pin Pulled low (0 V) L: HPA, VRR, ESR input H: HD, VD output
27	TEST2	—	TEST terminal 2 Must be connected to GND
28	RESET	I	Parameter Mode reset input Pulled up L: Level H: Active reset
29	TEST3	—	TEST terminal 3 Normally this pin is connected to AVSS ($2.2 \mu\text{F}$) via a bypass capacitor.
30	TEST4	—	TEST terminal 4 Normally this pin is connected to AVSS ($0.1 \mu\text{F}$) via a bypass capacitor.
31	AVSS	—	Analog VSS
32	TEST5	—	TEST terminal 5

Optical Characteristics (Note 1)

Characteristics	Symbol	Test Conditions	Min	Typ.	Max	Unit
Sensitivity (G)	R(G)	Standard conditions (Note 2)	150 (287 LSB)	200 (383 LSB)	—	mV
Saturation voltage	V _{SAT}	Saturation exposure G output	500 (959 LSB)	—	—	mV
Blooming margin	BLM	Light intensity is 500 times standard conditions (Note 3)	No blooming			—
S/N (dark)	S/N	G output	55	57	—	dB
Decay lag	LAG	G output = 20 mV	—	—	2	mV

Note 1: Amplifier gain setting: $\times 1$ (0dB)
 Actual digital output includes black level (64 LSB).

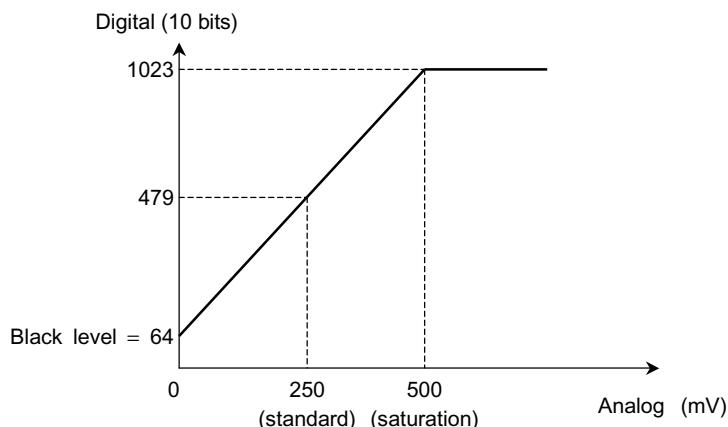

Note 2: Standard conditions for measuring sensitivity

- 100 nt
- Other conditions are based on Note 3.

Note 3: Standard conditions ($TC = 60^{\circ}\text{C}$ centigrade) as follows

- Light source: 3200 K, halogen light box
- Optical filter: IR cut filter (cut in half at 650 nm)
- Optical lens: Fujinon f = 25 mm, F number 2.8
- Standard signal level: G output = 250 mV
- Driving conditions: frame rate = 30 fps, electronic shutter OFF

The analog output level can be estimated as follows when a $\times 1$ gain DA converter (500 mVpp) is used.

Optical lens performance influences sensor characteristics.

- (1) F number: Less than F2.8 is recommended to maintain a high level of sensitivity and an acceptable S/N ratio.
- (2) Exit pupil may influence shading level.

Electrical Characteristics

DC Characteristics ($T_a = 25^\circ C$, $V_{DD} = 2.8 V$)

Characteristics	Symbol	Test Circuit	Test Condition		Min	Typ.	Max	Unit
High level input voltage	V_{IH}	—	(Note 4)		2	—	—	V
Low level input voltage	V_{IL}	—	(Note 4)		—	—	0.8	V
High level input current	I_{IH}	—	$V_{IN} = V_{DD}$	(Note 7)	150	250	μA	
				(Note 4 except DSTOP)	-10		10	
Low level input current	I_{IL}	—	$V_{IN} = V_{SS}$	(Note 4 except SGMODE)	-10	10	μA	
			$V_{IN} = V_{SS}$	(Note 6)	-220		-80	
High level output voltage	V_{OH}	—	$I_{OH} = -4 mA$		$V_{DD} - 0.4$	—	—	V
Low level output voltage	V_{OL}	—	$I_{OL} = 4 mA$		(Note 5)	—	—	0.4 V
Power supply current	I_{DD}	—	30fps		—	30	—	mA

Note 4: DSTOP, VRR, ESR, HPA, SGMODE, RESET, SCLK, SDATA, EN, MCK

Note 5: VD, STR, HD, DATACLK, DATA0~DATA9

Note 6: DSTOP

Note 7: SGMODE

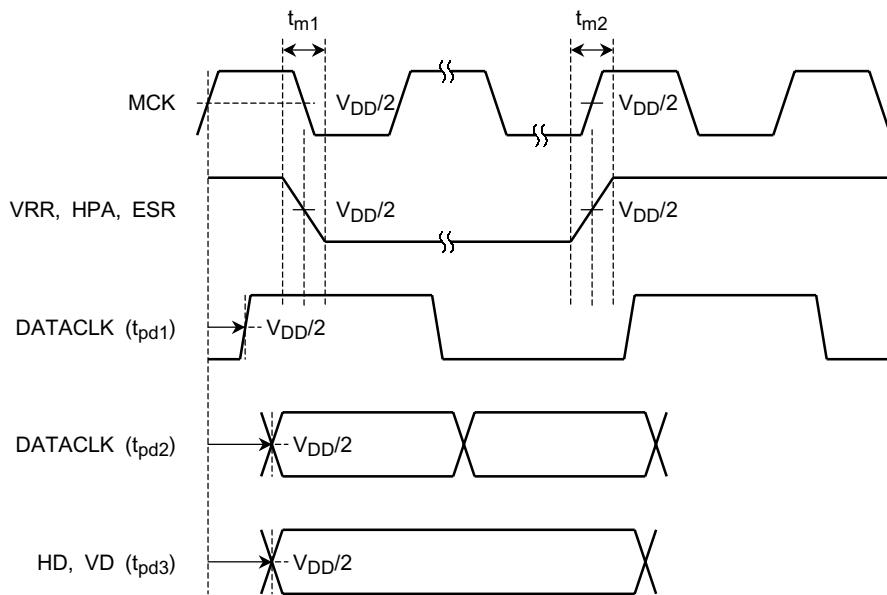

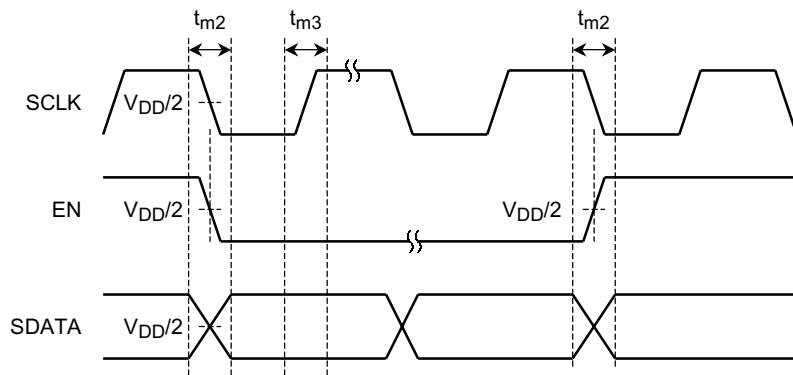

AC Characteristics ($T_a = 25^\circ C$, $V_{DD} = 2.8 V$)

Characteristics	Symbol	Test Circuit	Test Condition		Min	Typ.	Max	Unit
Timing margin for input pulse	t_m1	—	Based on MCK (Note 8)		-10	—	10	ns

Command Input Settings

(1) Amplifier gain setting

The gains for the Gr, R, B and Gb pixels can be set independently.

Normally the same setting value is used for each pixel type.

◆ Examples

Settings											Value	Gain Factor
1	1	1	1	1	1	1	1	1	1	1	1023	0.75 (min)
1	1	0	0	0	0	0	0	0	0	0	768	1 (default)
0	1	1	0	0	0	0	0	0	0	0	384	2
0	0	1	1	0	0	0	0	0	0	0	192	4
0	0	0	1	1	0	0	0	0	0	0	96	8
0	0	0	1	0	0	1	1	0	1		77	10 (recommended max)

(2) Electronic shutter speed in Internal Synchronization Mode

◆ Examples

Settings											Storage Time
0	0	0	0	0	0	0	0	0	0	0	OFF (default)
0	0	0	0	0	0	0	0	0	1		2H
0	0	0	0	0	0	0	0	1	0		3H
1	1	1	1	1	1	1	1	1	1		1
1	0	0	0	0	0	1	0	1	0		523H
1	0	0	0	0	0	1	0	1	1		524H

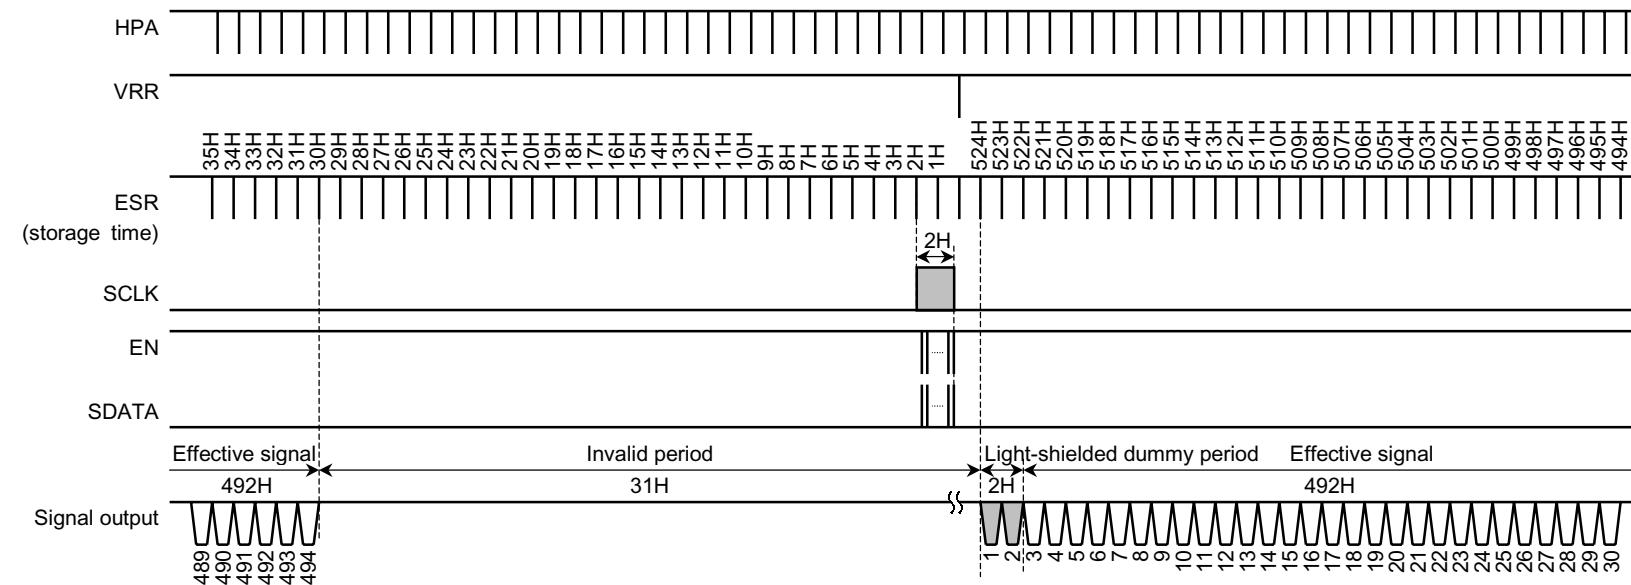

(3) Monitoring mode

0: Progressive scanning (Normal Mode)

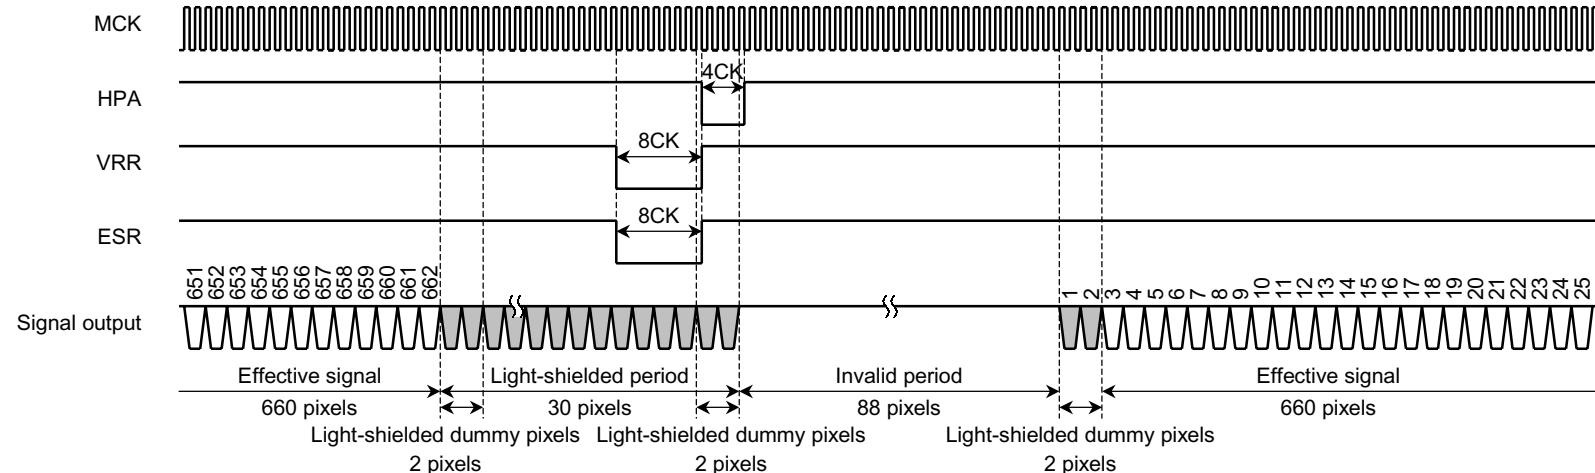

1: Alternate line pairs scanned (Monitoring Mode)
