

TOSHIBA Bipolar Linear Integrated Circuit Silicon Monolithic

# TA2069AFG

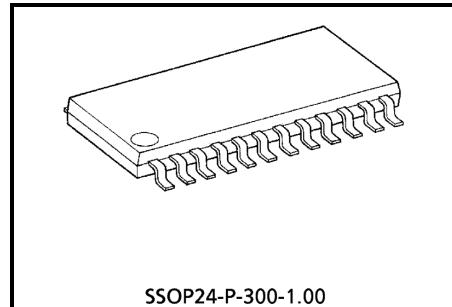

## 3V Stereo Headphone Amplifier (3V USE)

The TA2069AFG is developed for play-back stereo headphone equipments (3V use).

It is built in dual preamplifiers, dual OCL power amplifiers, motor governor, DC volume control and volume limiter etc.

### Features

- Built-in preamplifier  
Input coupling condenser-less  
Built-in input capacitor for reducing buzz noise  
Low noise:  $V_{ni} = 1.2 \mu V_{rms}$  (typ.)
- Built-in power amplifier  
OCL (output condenser-less)  
Voltage gain :  $G_V = 31dB$  (typ.)
- Built-in motor governor  
Current proportion type
- Built-in DC volume control function  
DC volume maximum attenuation :  $ATT = 82dB$  (typ.)
- Built-in volume limiter function
- Built-in bass boost function
- Operating supply voltage range ( $T_a = 25^\circ C$ )
  - PRE + PW:  $V_{CC} (\text{opr}) = 1.8\sim 3.6V$
  - GVN:  $V_{CC} (\text{opr}) = 2.1\sim 3.6V$  (motor voltage = 1.8V)
- Low supply current ( $V_{CC} = 3V$ ,  $f = 1kHz$ ,  $T_a = 25^\circ C$ , typ.)
  - PRE + PW

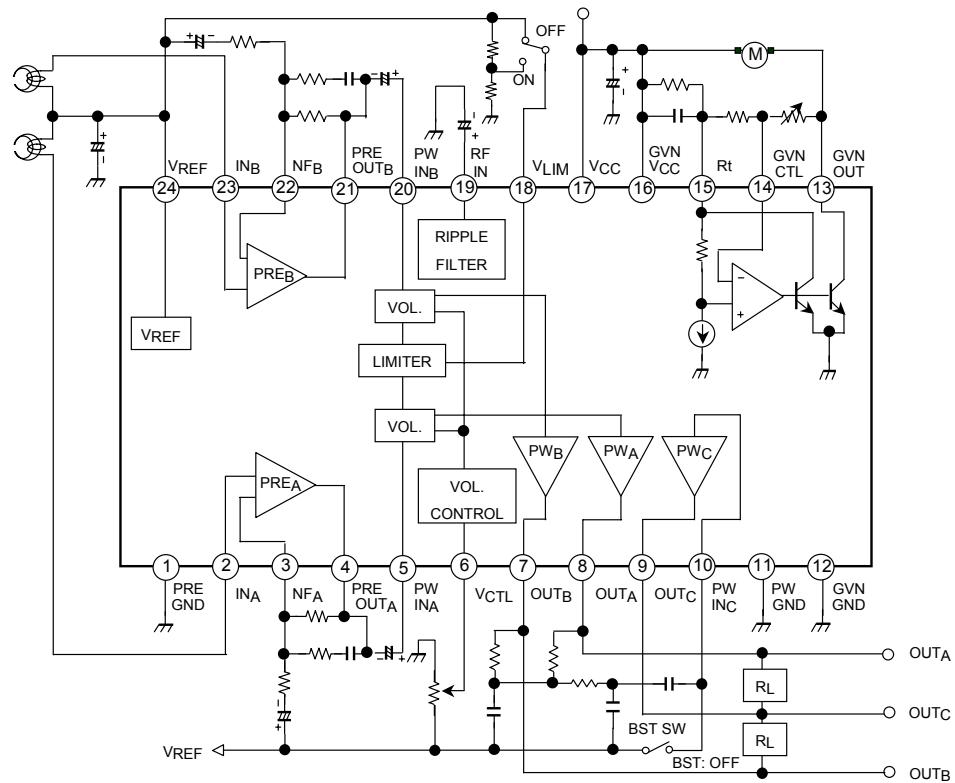

SSOP24-P-300-1.00

Weight: 0.32g (typ.)

|                  | No Signal | Output Power |           |
|------------------|-----------|--------------|-----------|
|                  |           | 0.1mW × 2    | 0.5mW × 2 |
| $R_L = 16\Omega$ | 9.5mA     | 14.2mA       | 19.5mA    |
| $R_L = 32\Omega$ | 9.5mA     | 12.5mA       | 16.5mA    |

GVN:  $I_{CC} = 2.5mA$

## Block Diagram

## Terminal Explanation

Terminal Voltage: Typical terminal voltage at no signal with test circuit

(V<sub>CC</sub> = 3V, Ta = 25°C)

| Terminal |                      | Function  | Internal Circuit | Terminal Voltage (V) |
|----------|----------------------|---|------------------|----------------------|
| No.      | Name                 |   |                  |                      |
| 1        | PRE GND              | The GND, except for power drive stage and motor governer stage.   | —                | 0                    |
| 2        | IN <sub>A</sub>      | Input of preamplifier   |                  | 1.2                  |
| 23       | IN <sub>B</sub>      |   |                  |                      |
| 3        | NF <sub>A</sub>      | NF of preamplifier  |                  | 1.2                  |
| 22       | NF <sub>B</sub>      |   |                  |                      |

| 19       | RF IN               | Ripple filter of power supply  |                  | 2.5                  |
| 24       | V <sub>REF</sub>    | Reference voltage<br>• Preamplifier and power amplifier operate on this reference. |                  | 1.2                  |

**Application Note****1. VCC and GND**

This IC has two VCC terminals and three GND terminals. Pattern layout should be designed carefully to reduce the common impedance.

**VCC**

VCC (pin 17): Preamplifier stage and power amplifier stage.

GVN VCC (pin 16): Motor governor stage.

**GND**

PRE GND (pin 1): Preamplifier stage and power amplifier stage except the power drive stage.

PW GND (pin 11): Power drive stage of power amplifier.

GVN GND (pin 12): Motor governor stage.

**2. VREF**

It is necessary to stabilize the VREF circuit, the internal circuit operate on this reference.

**3. Preamplifier**

Input signal should be applied to VREF standard, otherwise pop noise become bigger when VCC is turned on and off.

**4. Power amplifier**

It is necessary to insert the coupling capacitor through the PW IN terminal. In case that DC current or DC voltage is applied to the PW IN terminal, the internal circuit has unbalance and the power amplifier doesn't operate normally.

**Maximum Ratings (Ta = 25°C)**

| Characteristic           | Symbol               | Rating   | Unit |
|--------------------------|----------------------|----------|------|
| Supply voltage           | V <sub>CC</sub>      | 4        | V    |
| Power dissipation        | P <sub>D</sub>       | (Note 1) | mW   |
|                          |                      | (Note 2) |      |
| Output current (PW AMP.) | I <sub>O</sub> (PW)  | 200      | mA   |
| Output current (GVN)     | I <sub>O</sub> (GVN) | 700      | mA   |
| Operating temperature    | T <sub>opr</sub>     | -25~75   | °C   |
| Storage temperature      | T <sub>stg</sub>     | -55~150  | °C   |

Note 1: IC only: Derated above Ta = 25°C in the proportion 3.2 mW/°C

Note 2: IC + PCB (TOSHIBA typical PCB): Derated above Ta = 25°C in the proportion 7.4 mW/°C

## Test Circuit

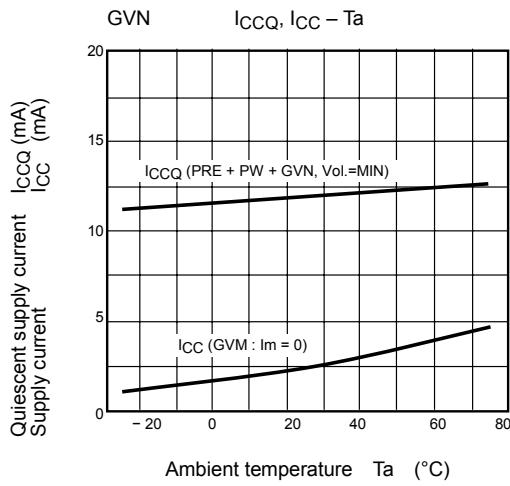

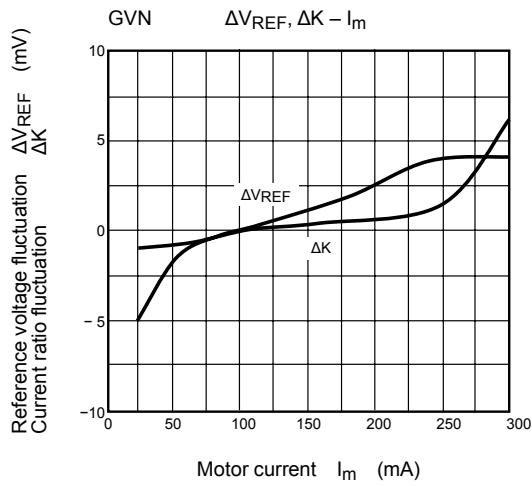

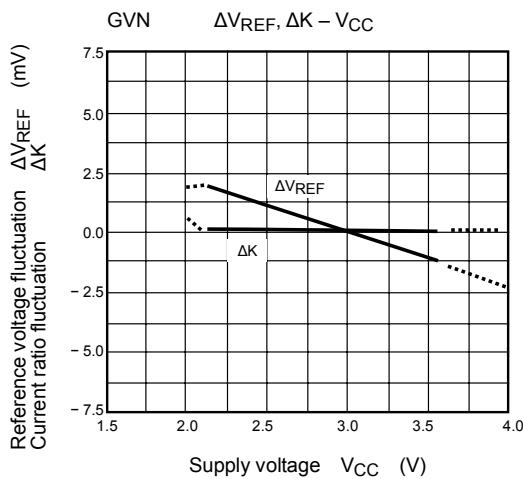

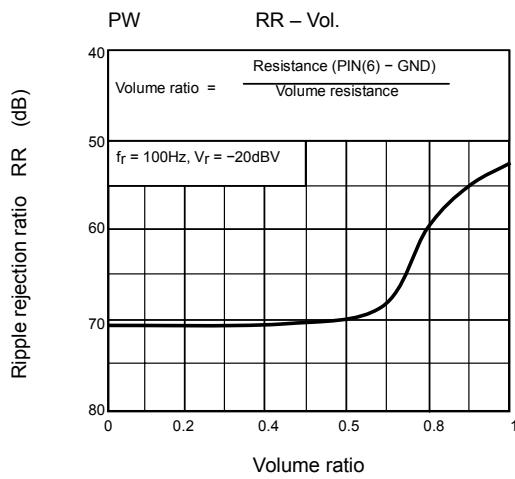

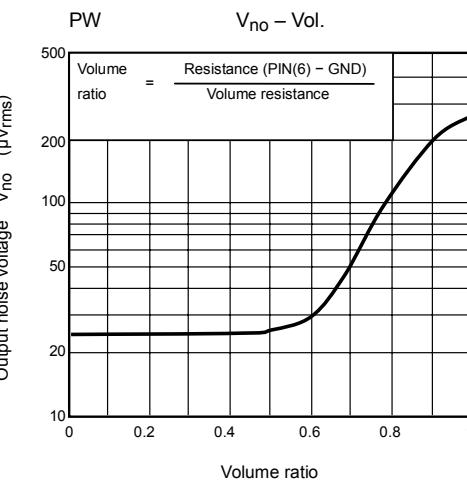

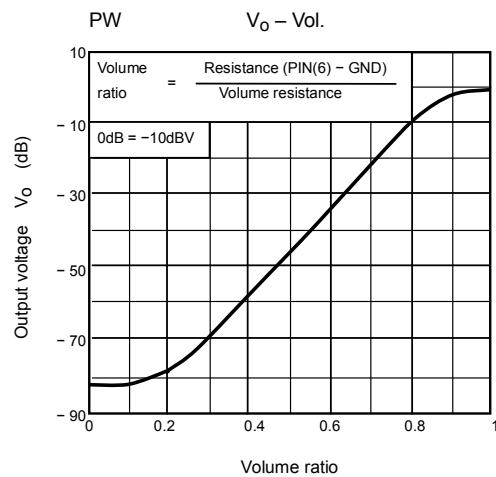

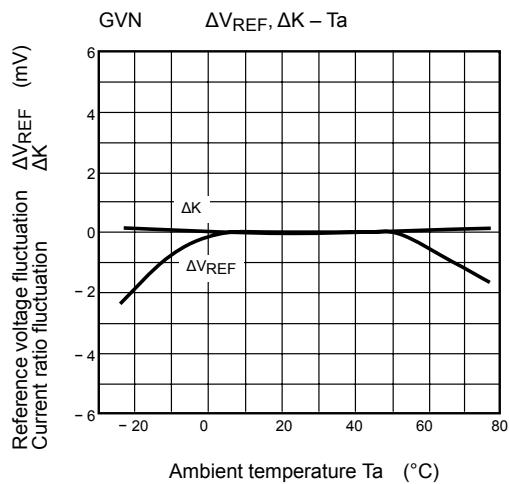

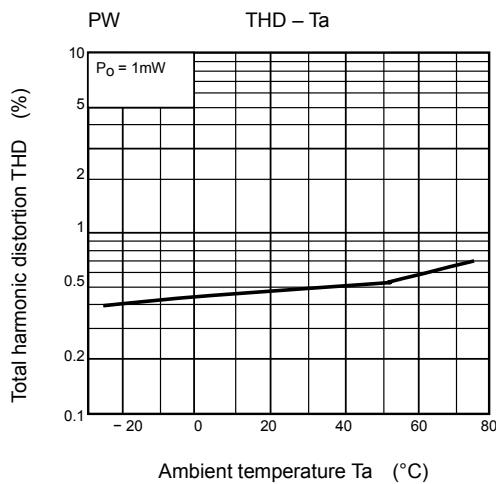

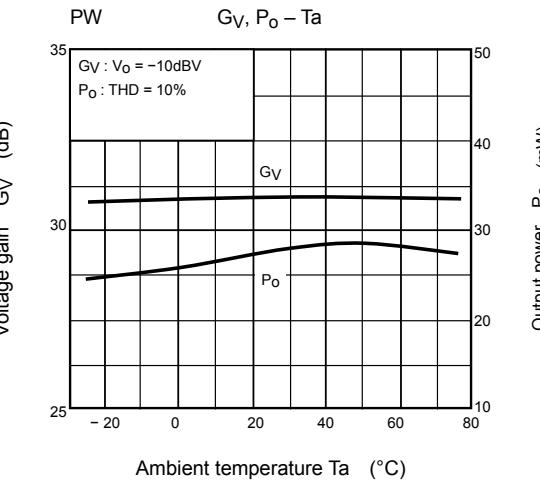

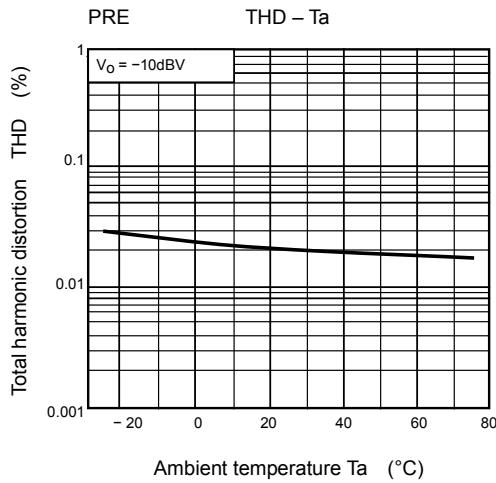

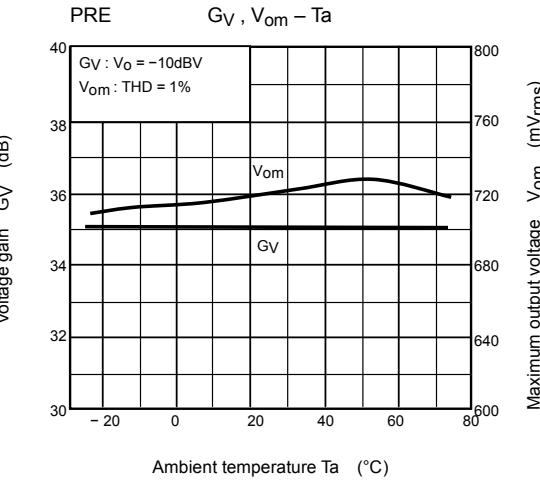

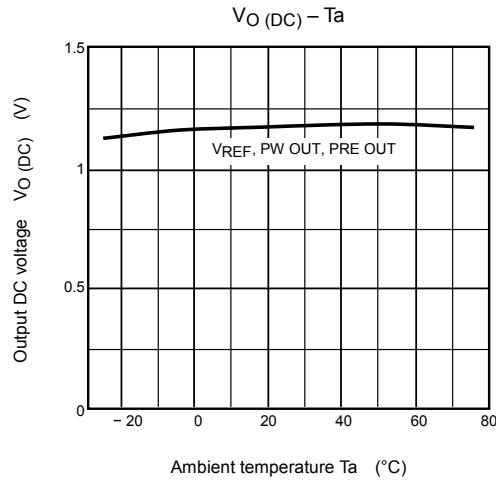

**Characteristic Curves**

Unless otherwise specified

 $V_{CC} = 3V$ ,  $T_a = 25^\circ C$ ,  $f = 1kHz$ Preamplifier:  $R_g = 2.2k\Omega$ ,  $R_L = 10k\Omega$ Power amplifier:  $R_g = 600\Omega$ ,  $R_L = 16\Omega$ ,  $V_{OL} = \text{max.}$ Motor governor:  $I_m = 100mA$ 

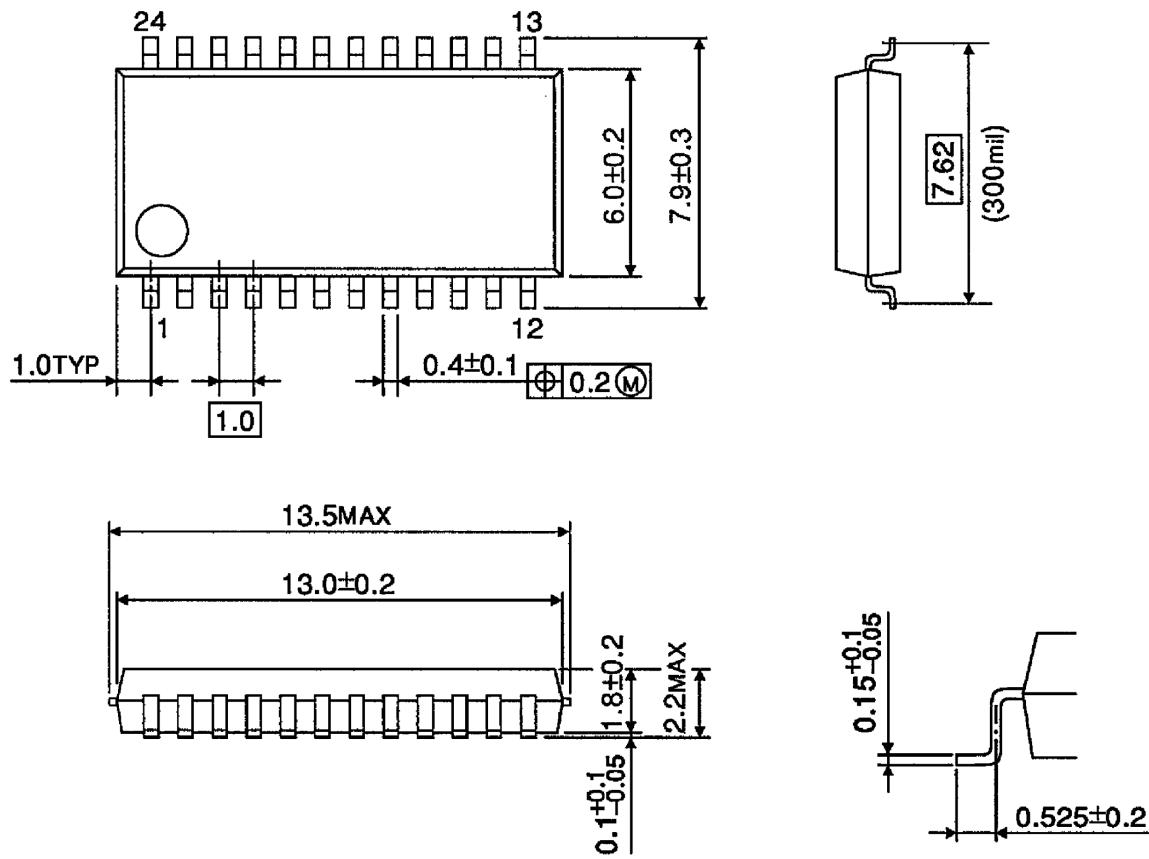

## Application Note

**Package Dimensions**

SSOP24-P-300-1.00

Unit : mm

Weight: 0.32g (typ.)

About solderability, following conditions were confirmed

- Solderability
  - (1) Use of Sn-63Pb solder Bath
    - solder bath temperature = 230°C
    - dipping time = 5 seconds
    - the number of times = once
    - use of R-type flux
  - (2) Use of Sn-3.0Ag-0.5Cu solder Bath
    - solder bath temperature = 245°C
    - dipping time = 5 seconds
    - the number of times = once
    - use of R-type flux

## RESTRICTIONS ON PRODUCT USE

030619EBA

- The information contained herein is subject to change without notice.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.  
In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the "Handling Guide for Semiconductor Devices," or "TOSHIBA Semiconductor Reliability Handbook" etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury ("Unintended Usage"). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer's own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations.
