TOSHIBA Photo IC Silicon Epitaxial Planar

TPS841(F),TPS843(F)

Lead Free Product

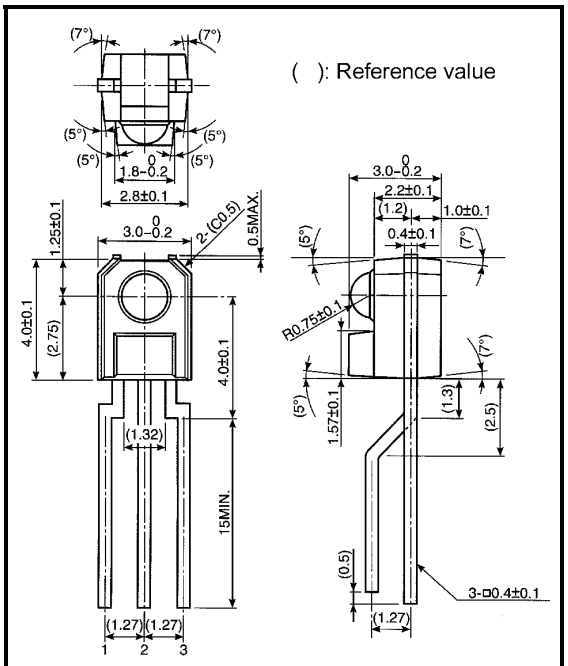
Photoelectric Switches

Copiers, Printers, and Facsimiles

Vending Machines

Handy Terminals

Unit: mm



TOSHIBA	0-3H1

Weight: 0.12 g (typ.)

The TPS841(F) and TPS843(F) represent a Si photo IC of digital output type that integrates a photodiode, amplifier circuit, and Schmitt trigger circuit into a single chip.

These devices are low voltage drive types, and they allow construction of low voltage systems which thus consume less power.

These devices respond faster than the phototransistor type. They output a high when light is input.

- Compact side-view epoxy resin package
- Operates over a wide supply voltage range
  : V_{CC} = 2.7 to 15 V
- High speed response
  : t_{pLH} = 9 μs, t_{pHL} = 15 μs (max)
- High sensitivity: 0.3 mW/cm^2 (max)
- Can be directly connected to TTL and CMOS.
- Digital output: TPS841(F) …. open collector
  TPS843(F) …. with a pull-up resistor

Maximum Ratings (Ta = 25°C)

Characteristics		Symbol	Rating	Unit
Supply voltage		V_{CC}	15	V
Output voltage	TPS841(F)	V_O	15	V
	TPS843(F)		=V_{CC}	
Output current		I_O	16	mA
Output current derating (Ta > 25°C)		ΔI_O/°C	−0.213	mA/°C
Power dissipation		P	250	mW
Power dissipation derating (Ta > 25°C)		ΔP/°C	−3.33	mW/°C
Operating temperature range		T_{opr}	−30 to 95	°C
Storage temperature range		T_{stg}	−40 to 100	°C
Soldering temperature (5s) (Note 1)		T_{sol}	260	°C

Note 1: At the location of 1.3 mm from the resin package bottom.

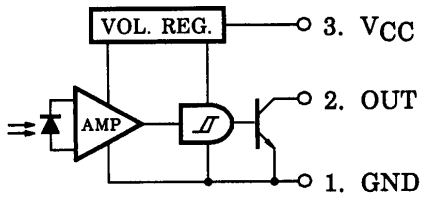
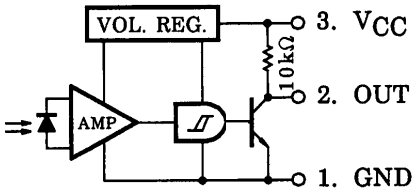
TPS841(F)



TPS843(F)



Opto-Electrical Characteristics

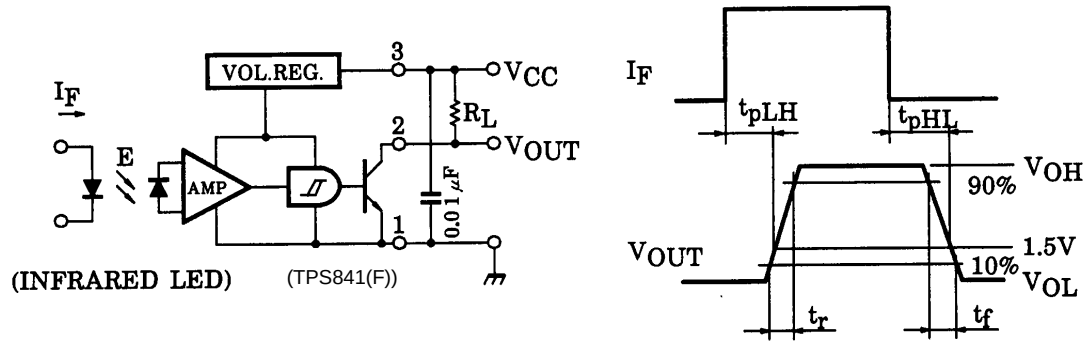
(Ta = –30 to 95°C, V_{CC} = 2.7 to 15 V, typical values are all at 25°C.)

Characteristics			Symbol	Test Condition	Min	Typ.	Max	Unit
Supply voltage			V_{CC}	—	2.7	—	15	V
High level supply current			I_{CCH}	E = 2 mW/cm^2 (Note 2)	—	0.5	1.2	mA
Low level supply current	TPS841(F)		I_{CCL}	E = 0	—	0.9	2	mA
	TPS843(F)				—	2.9	4	
High level output current	TPS841(F)		I_{OH}	E = 2 mW/cm^2 (Note 2) V_O = 15 V	—	—	6.3	μA
High level output voltage	TPS843(F)		V_{OH}	E = 2 mW/cm^2 (Note 2)	0.9∗V_{CC}	—	—	V
Low level output voltage			V_{OL}	I_{OL} = 16 mA, E = 0	—	0.07	0.4	V
"L→H" Threshold radiant incidence			E_{LH}	Ta = 25°C	—	0.2	0.3	mW/cm^2
				—	—	—	0.6	
Hysteresis ratio			E_{HL}/E_{LH}	Ta = 25°C	0.5	0.65	0.9	—
Peak sensitivity wavelength			λ_P	—	—	900	—	nm
Switching time	Propagation delay time	"L→H"	t_{pLH}	Ta = 25°C V_{CC} = 3.3 V E = 2 mW/cm^2 R_L = 10 kΩ (Note 3)	—	—	9	μs
		"H→L"	t_{pHL}		—	—	15	
	Rise time		t_r		—	0.02	0.5	
	Fall time		t_f		—	0.8	3	

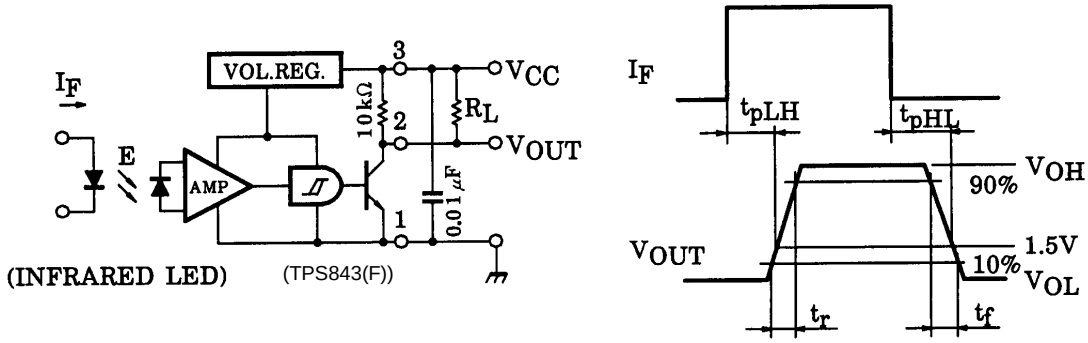
Note 2: CIE standard light source A (standard tungsten bulb) with color temperature = 2856 K.

Note 3: Switching time measurement circuit and waveform.

TPS841(F)



TPS843(F)



Precautions

- When you consider a combined use with an LED, be sure to use an infrared LED. Visible rays in wavelength of less than 700 nm cannot be detected.
- Make sure the shielding plate that is used to detect positions is manufactured from materials with superior light-shielding characteristics. Insufficient shield can cause malfunction.
- Photo ICs contain a high-sensitivity amplifier. Toshiba recommends connecting a capacitor of about 0.01 μF that has good high-frequency characteristics between V_{CC} and GND near the device to prevent unwanted oscillation.
- Please install so that disturbance light is not irradiated by these products.
  When disturbance light (incandescence light etc.) 700 nm or more is detected, it may incorrect-operate. Please perform sufficient evaluation and verification by set.
- During 100 μs after turning on V_{CC}, output voltage changes for stabilizing the inner circuit.

RESTRICTIONS ON PRODUCT USE

030619EBA

- The information contained herein is subject to change without notice.
- The information contained herein is presented only as a guide for the applications of our products. No responsibility is assumed by TOSHIBA for any infringements of patents or other rights of the third parties which may result from its use. No license is granted by implication or otherwise under any patent or patent rights of TOSHIBA or others.
- TOSHIBA is continually working to improve the quality and reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to comply with the standards of safety in making a safe design for the entire system, and to avoid situations in which a malfunction or failure of such TOSHIBA products could cause loss of human life, bodily injury or damage to property.
  In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent TOSHIBA products specifications. Also, please keep in mind the precautions and conditions set forth in the “Handling Guide for Semiconductor Devices,” or “TOSHIBA Semiconductor Reliability Handbook” etc..
- The TOSHIBA products listed in this document are intended for usage in general electronics applications (computer, personal equipment, office equipment, measuring equipment, industrial robotics, domestic appliances, etc.). These TOSHIBA products are neither intended nor warranted for usage in equipment that requires extraordinarily high quality and/or reliability or a malfunction or failure of which may cause loss of human life or bodily injury (“Unintended Usage”). Unintended Usage include atomic energy control instruments, airplane or spaceship instruments, transportation instruments, traffic signal instruments, combustion control instruments, medical instruments, all types of safety devices, etc.. Unintended Usage of TOSHIBA products listed in this document shall be made at the customer’s own risk.
- The products described in this document are subject to the foreign exchange and foreign trade laws.
- TOSHIBA products should not be embedded to the downstream products which are prohibited to be produced and sold, under any law and regulations.
