

M Series

Power Entry Modules Patent No. 4,488,201
with Optional RFI Power Line Filters
for General and Medical Applications

UL Recognized
CSA Certified
VDE Approved

M Series

The M series power entry modules offer the most choices of power entry components and filtering options to fit a specific need. The fully configured M series expands the options of a manufacturer whose products are marketed worldwide. One component, fully assembled and tested, provides the capability of interfacing a multi-voltage power supply to any common voltage or fusing scheme in the world, without modification.

- The IEC connector provides an internationally accepted power entry termination, which can be used with a variety of line cords.
- The selectable fuseholder allows use of single or dual European fuses, or a single North American fuse.
- The optional DPST on/off switch breaks both sides of the line and is labeled with the international I/O markings.
- The optional voltage selector provides a convenient means to change transformer primary connection, and it is available in both 2-voltage and 4-voltage configurations.
- The series is available with four filter circuits to meet a variety of applications, and convenient connections are provided on unfiltered models to allow wiring of a separate RFI filter.

The M series is a family of components offering maximum flexibility and cost-effectiveness in the selection of primary power components. Wiring to the modules is accomplished via .110" terminals for labor savings and convenience.

Four filter circuits provide a choice of attenuation tailored to specific categories of susceptibility and emissions needs.

HM Models – This medical filter provides susceptibility protection without the leakage current associated with line-to-ground capacitors. Designed to allow equipment to meet UL544 for patient care and nonpatient care equipment, the HMfilter has a maximum leakage current of 2 μ A at 120 VAC60 Hz. See Appendix C for more information on medical applications and UL standards.

FM Models – General purpose RFI filter designed for susceptibility applications, effectively providing RFI control of line-to-ground noise. The design is compact and meets the very low leakage current requirements of VDE portable equipment as well as (120 Volt) UL544 nonpatient medical equipment.

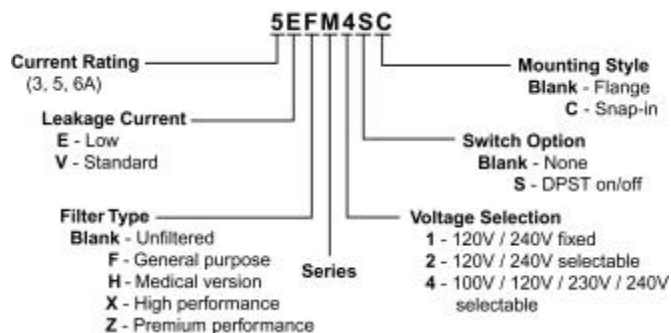

XM Models – High performance RFI filter designed to bring most digital equipment (including switching power supplies) into compliance with FCC Part 15J, Class B conducted emissions limits.

ZM Models – Premium RFI filter designed to bring most digital equipment (including switching power supplies) into compliance with EN55022, Level B (as well as FCC Part 15J, Class B) conducted emissions limits.

Fuse Block/Cover Assembly

To change from North American to European fusing: open cover, using small blade screwdriver or similar tool; loosen Phillips screw two turns; remove fuse block by sliding up, then away from Phillips screw and lifting up from pedestal; change fuses; (note that *two* European fuses are required, although a dummy fuse may be used in the neutral [lower] holder); invert fuse block and slide back onto Phillips screw and pedestal; tighten Phillips screw, and replace cover (note that fuse(s) that go into the housing first are the active set).

Fuse Changing

European Fusing Arrangement

North American Fusing Arrangement

Voltage Selection

To change selected voltage: open cover, using small blade screwdriver or similar tool; set aside cover/fuse block assembly; pull voltage selector card straight out of housing, using indicator pin; orient selector card so that desired voltage is readable at the bottom; orient indicator pin to point up when desired voltage is readable at bottom (note that when indicator pin is fixed, successive voltages are selected by rotating the card 90° clockwise); insert voltage selector card into housing, *printed side of card facing forward toward IEC connector and edge containing the desired voltage first*; replace cover, and verify that indicator pin shows the desired voltage.

Voltage Selector Card Orientation

Specifications – Unfiltered Models

Hipot rating (one minute):
 line-to-ground 1500 VAC
 line-to-line 1450 VDC
 line-to-load (switch off) 2500 VAC

Operating voltages: 100, 120, 230, 240 VAC

Operating frequency: 50/60 Hz

Switch: Double-insulated, rated for 100,000 operations at full load; 10,000 operations at 70 Amps inrush current.

Fuse (not included): Reversible fuseholder accepts one 1/4 x 1-1/4" fuse or two 5 x 20mm fuses.

Terminals: .110" (2.79mm) terminals

Electrical Schematics – Unfiltered Models

VM (1-Voltage)

VM (2-Voltage)

VM (4-Voltage)

Note 1: Jumpers required if no input filter is used.

Note 2: Provision for dual European style fusing.

Note 3: On/off switch present only with "S" suffix.

Note 4: When using a center-tapped transformer, the C-F winding should be the low voltage (high current) winding and must be capable of handling the full primary current in the 120V position.

230V Nomenclature relates to pending European CENELEC agreement.

6VM4SC

IEC Connector, DPST On/Off Switch, Voltage Selector, Selectable Fuseholder, Snap-In

Recommended Panel Cutout

Unfiltered Models

Note: Snap-in models allow front mount only.

All mounting holes countersunk.

Typical Dimensions

Mounting holes: $\frac{.155}{3.94}$ Dia. (2) Terminals: $\frac{.110}{2.79}$ Torque: 7 in. lbs. max.

Holes: $\frac{.055}{1.40}$ Dia. $\pm .004$, except solder lug ground tap with wire wrap.

Note: Mounting holes on tabs are countersunk and take #6 flathead screw.

Specifications – Filtered Models

Maximum leakage current, each line-to-ground:

@ 120 VAC 60 Hz:	HM Models	2 μ A
	FM Models	0.25 mA
	XM/ZM Models	0.30 mA
@ 250 VAC 50 Hz:	HM Models	5 μ A
	FM/XM/ZM Models	0.50 mA

Hipot rating (one minute):

line-to-ground	HM Models	1500 VAC
	FM/XM/ZM	1500 VAC
line-to-line	All Models	1450 VDC

Operating voltages: 100, 120, 230, 240 VAC

Operating frequency: 50/60 Hz

Rated voltage: 120/250 VAC

Switch: Rated for 100,000 operations at full load; 10,000 operations at 70 Amps inrush current.

Fuse (not included): Reversible fuseholder accepts one 1/4 x 1-1/4" fuse or two 5 x 20 mm fuses.

Terminals: .110" (2.79mm) terminals

Minimum insertion loss in dB:

Line-to-ground in 50 ohm circuit:
