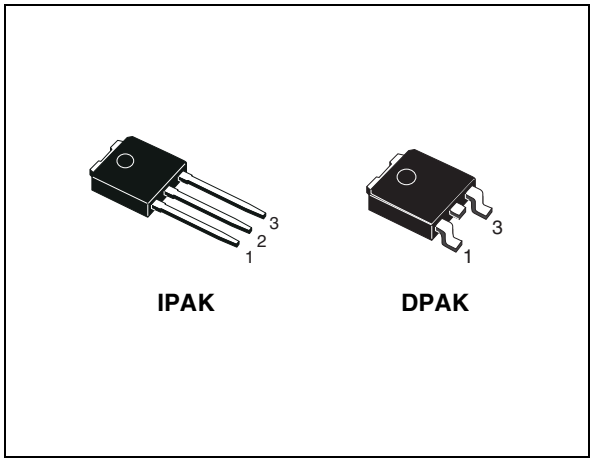
## N-channel 24V - 0.0039Ω - 80A - DPAK - IPAK
## Ultra low gate charge STripFET™ Power MOSFET

## Features

| Type | $V_{DSS}$ | $R_{DS(on)}$ | $I_D$ |
|---|---|---|---|
| STD95NH02L | 24V | < 0.005Ω | 80A(1) |
| STD95NH02L-1 | 24V | < 0.005Ω | 80A(1) |

1. Value limited by wire bonding

- Conduction losses reduced
- Switching losses reduced
- Low threshold device



## Description

The device is based on the latest generation of ST's proprietary STripFET™ technology. An innovative layout enables the device to also exhibit extremely low gate charge for the most demanding requirements in high-frequency DC-DC converters. It's therefore ideal for high-density converters in Telecom and Computer applications.

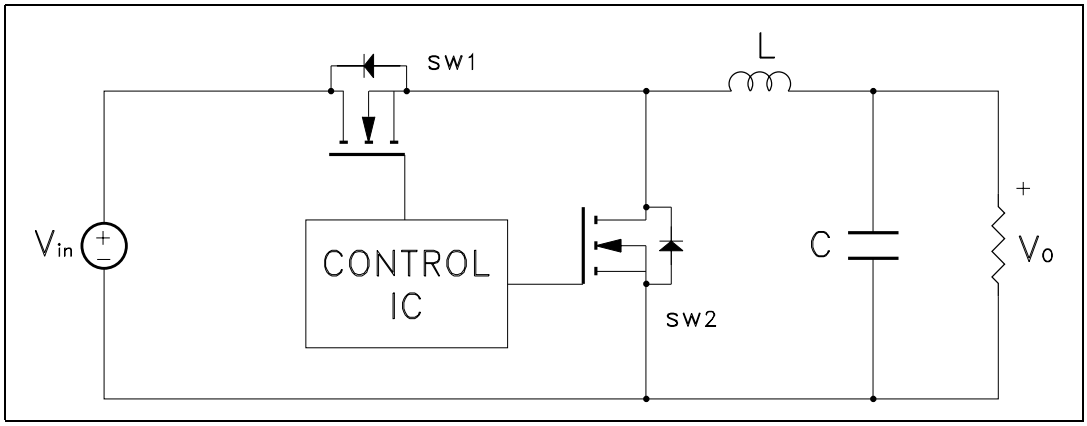
**Figure 20. Buck converter: power losses estimation**



The power losses associated with the FETs in a synchronous buck converter can be estimated using the equations shown in the table below. The formulas give a good approximation, for the sake of performance comparison, of how different pairs of devices affect the converter efficiency. However a very important parameter, the working temperature, is not considered. The real device behavior is really dependent on how the heat generated inside the devices is removed to allow for a safer working junction temperature.

- The low side (SW2) device requires:
- Very low $R_{DS(on)}$ to reduce conduction losses
- Small Qgls to reduce the gate charge losses
- Small Coss to reduce losses due to output capacitance
- Small Qrr to reduce losses on SW1 during its turn-on
- The Cgd/Cgs ratio lower than Vth/Vgg ratio especially with low drain to source
- voltage to avoid the cross conduction phenomenon;
- The high side (SW1) device requires:
- Small Rg and Ls to allow higher gate current peak and to limit the voltage feedback on the gate
- Small Qg to have a faster commutation and to reduce gate charge losses
- Low $R_{DS(on)}$ to reduce the conduction losses.

**Table 7. Power losses calculation**

| | High side switching (SW1) | Low side switch (SW2) |
|---|---|---|
| Pconduction | $R_{DS(on)SW1} * I_L^2 * \delta$ | $R_{DS(on)SW2} * I_L^2 * (1-\delta)$ |
| Pswitching | $V_{in} * (Q_{gsth(SW1)} + Q_{gd(SW1)}) * f * \frac{I_L}{I_g}$ | Zero Voltage Switching |

**Table 7. Power losses calculation**

| | | High side switching (SW1) | Low side switch (SW2) |

# 5 Package mechanical data

In order to meet environmental requirements, ST offers these devices in ECOPACK® packages. These packages have a Lead-free second level interconnect. The category of second level interconnect is marked on the package and on the inner box label, in compliance with JEDEC Standard JESD97. The maximum ratings related to soldering conditions are also marked on the inner box label. ECOPACK is an ST trademark. ECOPACK specifications are available at: www.st.com
