HIGH-SPEED BiCMOS ECL STATIC RAM 1M (256K x 4-BIT) SRAM

PRELIMINARY
IDT10514
IDT100514
IDT101514

FEATURES:

- 262,144-words x 4-bit organization
- Address access time: 10/12/15 ns
- Low power dissipation: 800mW (typ.)
- Guaranteed Output Hold time
- Fully compatible with ECL logic levels
- Separate data input and output
- Standard through-hole and surface mount packages
- Guaranteed-performance die available for MCMs/hybrids

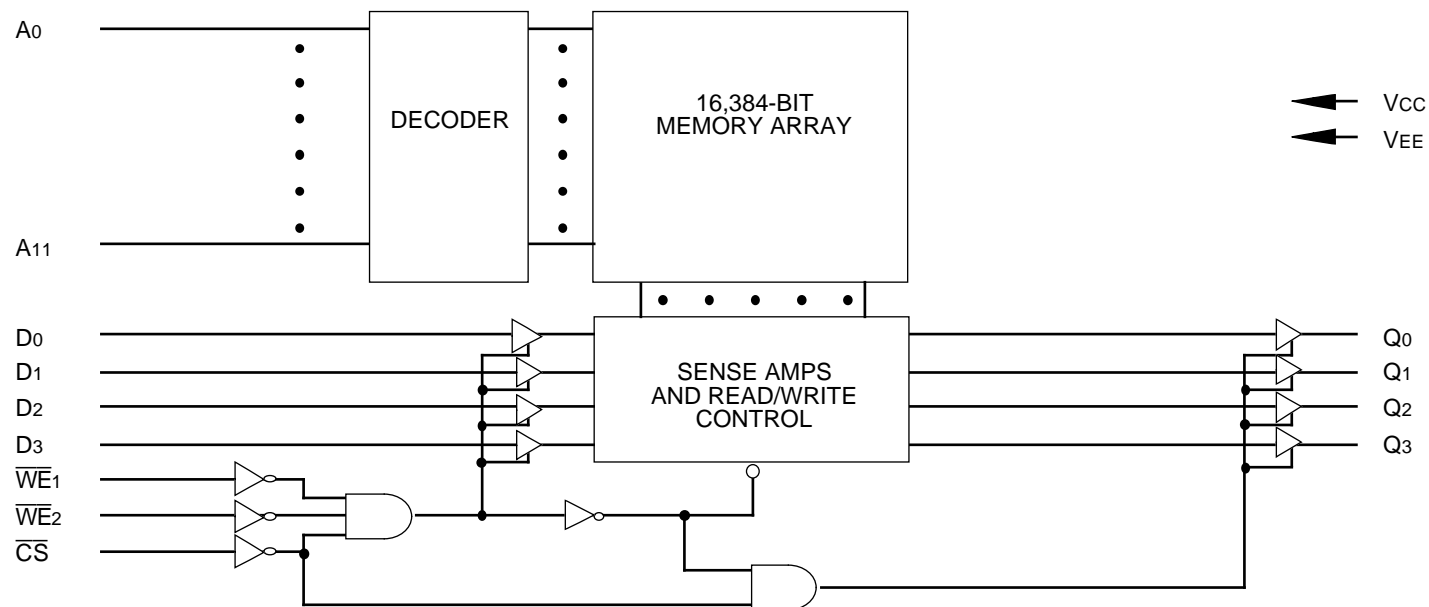

DESCRIPTION:

The IDT10514, IDT100514 and IDT101514 are 1,048,576-bit high-speed BiCMOS ECL Static Random Access Memories organized as 256Kx4, with separate data inputs and outputs. All I/Os are fully compatible with ECL levels.

These devices are part of a family of asynchronous four-bit-wide ECL SRAMs. The devices have been configured to follow the standard ECL SRAM JEDEC pinout. Because they are manufactured in BiCMOS technology, power dissipation is greatly reduced over equivalent bipolar devices. Low power operation provides higher system reliability and makes possible the use of the plastic SOJ package for high-density surface mount assembly.

The fast access time and guaranteed Output Hold time allow greater margin for system timing variation. DataIN setup time specified with respect to the trailing edge of Write Pulse eases write timing allowing balanced Read and Write cycle times.

P _T	Power Dissipation		1.5	W
I _{OUT}	DC Output Current (Output High)		-50	mA

NOTE:

2786 tbl 04

- Stresses greater than those listed under ABSOLUTE MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect reliability.

AC/DC ELECTRICAL OPERATING RANGES

I/O	V _{EE}	T _A
10K	-5.2V ± 5%	0 to +75°C, air flow exceeding 2 m/sec
100K	-4.5V ± 5%	0 to +85°C, air flow exceeding 2 m/sec
101K	-4.75V to -5.46V	0 to +75°C, air flow exceeding 2 m/sec

FUNCTIONAL DESCRIPTION

The IDT10514, IDT100514, and IDT101514 BiCEMOS ECL static RAMs provide high speed with low power dissipation typical of BiCMOS ECL. These devices follow the conventional center power pinout and functionality for 256Kx4 ECL SRAMs.

READ TIMING

The read timing on these asynchronous devices is straightforward. DataOUT is held low until the device is selected by Chip Select (CS). The Address (ADDR) settles and data appears on the output after time tAA. Note that DataOUT is held for a short time (tOH) after the address begins to change for the next access, then ambiguous data is on the bus until a new time tAA.

WRITE TIMING

To write data to the device, a Write Pulse need be formed on the Write Enable input (WE) to control the write to the SRAM array. While CS and ADDR must be set-up when WE goes low, DataIN can settle after the falling edge of WE, giving the data path extra margin. Data is written to the memory cell at the end of the Write Pulse, and addresses and Chip Select must be held after the rising edge of the Write Pulse to ensure satisfactory completion of the cycle.

DataOUT is disabled (held low) during the Write Cycle. If CS is held low (active) and addresses remain unchanged, the Data OUT pins will output the written data after "Write Recovery time" (tWR).

Because of the very short Write Pulse requirement, these devices can be cycled as quickly for Writes as for Reads.

AC ELECTRICAL CHARACTERISTICS (Over the AC Operating Range)

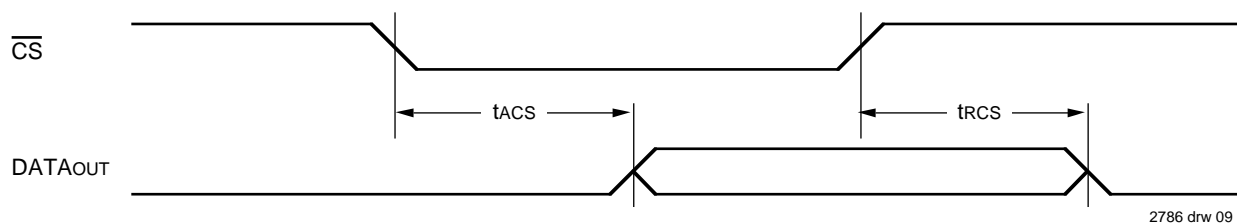

Symbol	Parameter ⁽¹⁾	S10		S12		S15		Unit
		Min.	Max.	Min.	Max.	Min.	Max.	
Read Cycle								
tACS	Chip Select Access Time	—	5	—	6	—	7	ns
tRCS	Chip Select Recovery Time	—	5	—	6	—	7	ns
tAA	Address Access Time	—	10	—	12	—	15	ns
tOH	Data Hold from Address Change	2.5	—	2.5	—	2.5	—	ns

NOTE:

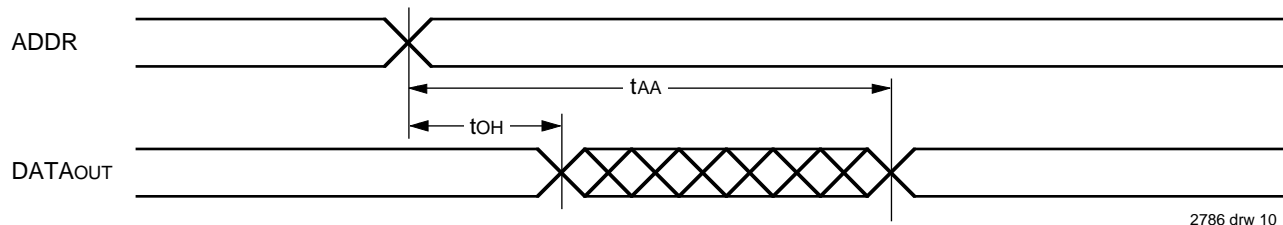

- Input and Output reference level is 50% point of waveform.

2786 tbl 07

READ CYCLE GATED BY CHIP SELECT (1, 2)

READ CYCLE GATED BY ADDRESS (1, 3)

NOTE:

- WE is high for read cycle.
- Address valid prior to or minimum of t_{AA}-t_{ACS} before CS active.
- CS active prior to or minimum t_{AA}-t_{ACS} after address valid.

AC ELECTRICAL CHARACTERISTICS (Over the AC Operating Range)

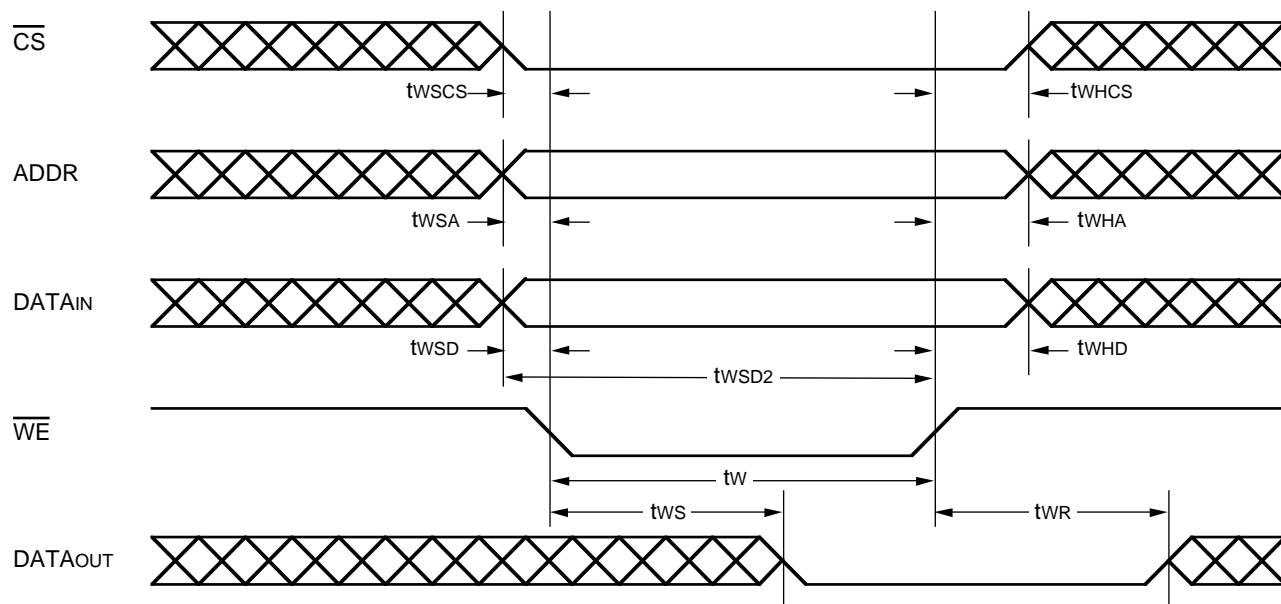

Symbol	Parameter ⁽¹⁾	S10		S12		S15		Unit
		Min.	Max.	Min.	Max.	Min.	Max.	
Write Cycle								
tw	Write Pulse Width (twSA = minimum)	8	—	10	—	10	—	ns
twSD	Data Set-up Time	0	—	0	—	2	—	ns
twSD2 ⁽²⁾	Data Set-up Time to <u>WE</u> High	6	—	8	—	8	—	ns
twSA	Address Set-up Time (tw = minimum)	0	—	0	—	1	—	ns
twSCS	Chip Select Set-up Time	0	—	0	—	1	—	ns
twHD	Data Hold Time	1	—	1	—	1	—	ns
twHA	Address Hold Time	1	—	1	—	1	—	ns
twHCS	Chip Select Hold Time	1	—	1	—	1	—	ns
tws	Write Disable Time	—	6	—	6	—	6	ns
tWR ⁽³⁾	Write Recovery Time	—	12	—	14	—	16	ns

NOTE:

- Input and Output reference level is 50% point of waveform.
- twSD is specified with respect to the falling edge of WE for compatibility with bipolar part specifications, but this device actually only requires twSD2 with respect to rising edge of WE.
- tWR is defined as the time to reflect the newly written data on the Data Outputs (Q0 to Q3) when no new Address Transition occurs.
