Circuit Breakers

DIN rail-mounted equipment protection

To choose a circuit breaker, determine the following:

The normal current load (nominal current)

Specify the size of the breaker in amps based on the normal current load.

Possible types of failure

Match the short-circuit and overload protection requirements to the performance characteristics of the breaker.

Rupture capacity

Specify the breaker, knowing the maximum fault current that can be repeatedly (3x minimum) interrupted without failure of the breaker.

Maximum interrupting capacity

Choose the breaker, knowing the maximum current at a given voltage that the breaker can interrupt safely without damage to surrounding components.

The wire size the breaker must accommodate

Determine if the breaker can accept the wire sizes required.

How fast the circuit breaker must react to a fault condition

Specify a breaker by selecting a speed that avoids nuisance tripping but protects against component damage.

How many poles are needed

Determine the number of poles needed that are connected electrically and structurally.

Functional requirements of the breaker

Define the requirements for visual inspection, switching, auxiliary circuits or space.

Environmental factors – temperature, moisture, vibration

Determine if there are unusual conditions in which the breaker must operate.

DIN rail-mounted

Thermal Miniature and Thermal Magnetic Circuit Breakers

Thermal Miniature Circuit Protection (TCP)

Thermal circuit protectors use heat-sensitive bimetallic elements that respond to overload electrical currents.

- **Thermal Miniature Circuit Protectors** are compact protectors designed to interrupt an electric current under overload conditions. The protector can accommodate ten nominal currents ranging from 0.10 A to 10 A.

After an overload has occurred, TCP breakers are easily reset by pushing the reset button. The breakers can be plugged into UK 6-FSI/C (screw) or ST 4-FSI/C (spring) terminal blocks for convenient DIN rail mounting.

Thermal Magnetic Circuit Breakers (TMC)

Thermal Magnetic circuit breakers interrupt an electrical current under overload or short-circuit conditions. They have both thermal circuit interruption and magnetic interruption functions. The thermal function uses heat-sensitive bimetallic elements that respond to overload currents. The magnetic function responds to very high current overloads such as those that might occur during short-circuit conditions.

- **TMC 42** breakers are available in one- or two-pole configuration for currents ranging from 0.10 to 16 amps. TMC 42 breakers can be snapped directly on a DIN rail. They are reset by pushing a red reset button.
- **TMC 60** breakers are available in one-, two-, or three-pole configurations for currents ranging from 0.5 to 63 amps. TMC 60-Series breakers can be snapped directly on a DIN rail. They are reset by moving the toggle switch to the green (activation) position.
- **TMC 1** breakers are available in one-, two- or three-pole configurations for currents ranging from 0.1 to 32 amps. This high-density breaker has built-in auxiliary contacts. TMC 1 breakers can be snapped directly on a DIN rail. They are reset by moving the toggle switch to the I (activation) position.

Thermal (Miniature) Circuit Protectors (TCP)

TCPs are compact circuit protectors designed to interrupt an electric current under overload conditions. There are ten nominal current ratings available, ranging from 0.10 A to 10 A.

TCP protectors are trip-free and reset easily after a current interruption by pushing the reset button. The protector can be plugged into UK 6-FSI/C or ST 4-FSI/C fuse base terminal blocks for convenient DIN rail-mounting.

	[V AC]	[V DC]
Nominal Voltage	250	72

Technical Data	Type	Order No.	Pcs./Pkt.
Thermal Circuit Breaker	Nominal current [A]		
plugged into UK 6-FSI/C or ST 4-FSI/C base terminal blocks	0.10	TCP 0.10	07 12 10 7
	0.25	TCP 0.25	07 12 12 3
	0.50	TCP 0.5	07 12 15 2
	1.00	TCP 1	07 12 19 4
	2.00	TCP 2	07 12 21 7
	3.00	TCP 3	07 12 23 3
	4.00	TCP 4	07 12 25 9
	6.00	TCP 6	07 12 27 5
	8.00	TCP 8	07 12 29 1
	10.00	TCP 10	07 12 31 4

(1) Flat Zack strip, unprinted, 10-section for labeling the upper marker grooves	ZBF 5:WH: Unprinted	08 08 64 2	10
--	--------------------------------------	------------	----

Technical data in accordance with IEC/DIN VDE			
Nominal voltage	[V AC] / [V DC]	250 / 72	
Nominal current	[A]	0.10-10	
Ambient temperature	°C	-20...+60	

Interrupting capacity			
for nominal currents of 0.10 - 4 A	[A]	6x rated current *	
for nominal currents of 6 - 10 A	[A]	8x rated current **	
for short circuit		2,000 Amps	

Insulating material		Polymide (PA), non-reinforced
Inflammability class in accordance with UL 94		V0
Approval data (UL and c/UL)	[V AC] / [V DC] / [A]	250 / 72 / 0.1-10

* If fault current exceeds 6 times I_n, TCP may require replacing.
** If fault current exceeds 8 times I_n, TCP may require replacing.

Thermal Miniature Circuit Breaker TCP compared to glass fuses

TCP Feature	TCP	Glass Fuses
Convenience	Reset with reset button when overload is resolved	Storing, ordering and locating issues
Deterioration	Virtually no aging	Age with eventual failure at normal loads
Life expectancy	3,000 operations at current rating, 500 operations at 2x current rating	Unknown
Interruption detection	Visual identification	Status not determined until fuse is removed from its holder
ON / OFF capability	Switch duty actuator allows product to operate as an electrical switch	Not applicable
Hot-swappable	May be removed or replaced under load	Not applicable
Controlled trip	Avoids nuisance trips due to high in-rush currents	Not applicable

Technical data for TCP

Time/current characteristic curve
Ambient temperature 23 C

Nominal currents and internal resistances

Nominal current [A]	Internal resistance [W]
0.1	81
0.25	14
.5	3.4
1	0.9
2	0.25
3	0.11
4	0.07
6	≤ 0.05
8	≤ 0.05
10	≤ 0.05

The time/current characteristic curve depends on the ambient temperatures. To avoid a premature or late switch-off, the nominal current of the circuit breaker must be multiplied with a temperature factor.

Ambient temperature °F	-4	14	32	73.4	104	122	140
°C	-20	-10	0	23	40	50	60
Temperature factor	0.76	0.84	0.92	1	1.08	1.16	1.24

NOTE: If the TCP circuit protectors are mounted side-by-side with less than the minimum of 1 mm of space for air movement, then do not exceed 80 percent of their rating.

Thermal Magnetic Circuit Breaker

TMC 42-01/42-02

One- and two-pole thermal magnetic circuit breaker with tease-free, trip-free, snap action mechanism and two-button operation (M-type TMCBE to IEC 934). The one-pole features a narrow profile housing, recessed terminals, standard DIN rail-mounting and precision CBE performance.

Typical Applications

Circuit protection for process control systems, equipment manufacturers and instrumentation.

* Indicates breakers that are made-to-order and may require an 8 to 10 week lead time.

Typical time / current characteristics at 23 degrees Celsius

Direct Current – Magnetic tripping currents are increased by 30 percent in DC circuits with the effect of shifting the magnetic trip range 30 percent to the right of AC trip curves.

The time/current characteristic curve depends on the ambient temperature prevailing. In order to eliminate nuisance tripping, multiply the circuit breaker current ratings by the derating factor shown below.

Ambient temperature	°F	-22	-4	14	32	73.4	104	122	140
	°C	-30	-20	-10	0	23	40	50	60
Derating factor		0.76	0.79	0.83	0.88	1	1.08	1.16	1.24

Thermal Magnetic Circuit Breakers - UL 1077

TMC 60 Series for mounting on 35 mm DIN rail

Overview

The TMC 60 Series provides supplemental overload and short-circuit protection. An interrupt capacity of 10 kAIC at 480 / 277V AC and DC ratings make the series ideal for a wide range of applications.

These DIN rail-mountable circuit breakers are available in one-, two- and three-pole configurations. An auxiliary contact in S- or H-function status output is also available. The TMC 60 Series is UL recognized, CSA approved and carries the CE mark.

Typical Application

Circuit protection for power supplies, UPS, controller I/O points, relay/contactors coils, control circuits, appliances and motor circuits.

Technical Data

Maximum Voltage Rating	AC 277 / 480 V	Vibration	3 g (10 to 55 Hz) to IEC 68-2-6
Interrupting Capacity	10,000 Amps	Trip Characteristics	C: 0.5-63A
Current Rating Range	0.05 A to 63 A	Torque	4.5 Nm / 39.8 lb _f -in
Temperature Range		Vibration (per IEC 60077)	3 g (in x, y, z direction)
Operating Temperature	-25° to +55°C (-13° to +131°F)	Plastics Rating per UL 94	V0
Storage Temperature	-55° to +55°C (-67° to +131°F)	Protection Level	IP 20
Insulation Values (IEC 664 and 664A)	Rated Impulse Withstand Voltage	Configuration	1 pole 2 pole 3 pole
Operating Area	6.0 kV	Weight	125 g 250 g 375 g
Insulation Resistance	>100 MΩ (DC 500V)		
Life at Rated Current Mechanical	6,000 operations (UL tested) 10,000 operations		
Cable Size	max 35 mm ² / AWG 2 (LINE) max 25 mm ² / AWG 3 (LOAD) max 2.5 mm ² / AWG 12 (auxiliary circuits)		
	Minimum 1 mm ² or AWG 16 for all circuits. Use a ferrule with wire sizes smaller than 16 AWG.

Typical time/current characteristics at 23 degrees Celsius

(multipole types: all poles symmetrically loaded)

The time/current characteristic curve depends on the ambient temperature prevailing. In order to eliminate nuisance tripping, multiply the circuit breaker current ratings by the derating factor shown at right.

Amps	Temperature

Thermal Magnetic Circuit Breakers - UL 1077

TMC 60 Series Accessories

Technical Data

Auxiliary Contact		
Ratings	Voltage / Current	AC 240 V / 5 A
		DC 24 V / 4 A
		DC 60 V / 1 A
		DC 220 V / 0.4 A
Contacts	1 Form C	
Rated Wire Sizes	2.5 mm ² / 14 AWG	
Weight	70 g	
Contact Functions*	Auxiliary (H) or Signal (S)	

*The TMC 6AUX S / H can operate as either an auxiliary contact (H function) or a signal contact (S function). The operation of the auxiliary switch is determined at the time of installation. The operation of the auxiliary switch is determined at the time of installation. The signal contact (function S) status provides the automatic trip status of the protection device. The auxiliary (H function) provides the OPEN/ CLOSED status of the protective device. A test button on the front of the auxiliary switch simulates functions S or H. The test button also acts as a reset for the trip signal (function S) contacts.

Dimensions

Note: all measurements in millimeters

DC Circuit Wiring

Thermal Magnetic Circuit Breaker (TMC)

TMC 1/2/3

One-, two- and three-pole thermal magnetic circuit breakers with trip-free, snap action mechanism and toggle actuation (S-type: IEC 934). Breaker has a universal mounting foot so it can be snapped on both NS 35 and NS 32 mounting rail profiles. Available with auxiliary contact (1 x N / O or 1 x N / C) for status signaling. Two- and three-pole models are internally linked to ensure that all poles trip in the event of an overload on one pole, even if the actuator is held in the ON position. This circuit breaker can be supplied in current ratings to 32 A with a choice of characteristic curves. All screw terminals are recessed for safety.

Technical Data	
Maximum Voltage Rating	AC 277V; 3 AC 480 V (50/60 Hz) DC 65 V
Current Rating Range	0.1...32 A non-inductive
Auxiliary Circuit	1 A, AC 277V / DC 65V
Typical Life	10,000 operations at 1 x I _N
Temperature Range	0° to +55°C (+32° to +131°F)
Creepage Resistance	PTI 400 to IEC 112
Insulation Coordination	
(IEC 664 and 664A)	Rated Impulse Withstand Voltage Pollution Degree
Operating Area	2.5 k V 2
Main/Auxiliary Circuit	2.5 k V 2
Pole/Pole	2.5 k V 2
Dielectric Strength (IEC 664 and 664A)	
Test Voltage	
Operating Area	AC 3,000 V (double insulation)
Main / Auxiliary Circuit	AC 3,000 V
Pole / Pole	AC 1,500 V
Insulation Resistance	>100 MΩ (DC 500 V)
Interrupting Capacity (VDE 0660, Part 101, P-2) (AC 250/415 V, DC 65 V)	0.1...5 A 400 A; 6...32 A 800 A Curve T2; 0.1...32 A 15 I _N Curve M3; 0.1...2 A 200 A AC

- (1) Thermal Magnetic – Thermal provides overload protection; magnetic provides short-circuit protection.
- (2) Interrupting capacity is the maximum fault current that can be repeatedly (3x minimum) interrupted without failure of the breaker.
- (3) Self-limiting means that internal resistance is high enough to restrict the flow of current to a level that will not harm the circuit breaker.
- (4) Maximum current at a given voltage at which the circuit breaker can interrupt safely without damage to surrounding components.
- (5) Review trip curve for precise trip behavior of the breaker.
- (6) N/O means auxiliary contacts are open and N/C means auxiliary contacts are closed when main terminal contacts are open.
- (7) Trip-free means the breaker contacts cannot be forced or held closed during any fault condition (overloads or short circuits).
- (8) Tease-free means breaker contacts cannot be forced close enough for current to arc (and potentially weld together) under a fault condition.
- (9) A bus bar can connect to the supply terminal and can feed a series of breakers.

TMC 42 Series

TMC 1 Series (with Alarm Contact)
